### Department of Electronics and Communications Engineering

## B.E. Program Outcomes (PO's)

1. Engineering Knowledge	Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization for the solution of complex engineering problems
2. Problem Analysis	Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
Design/Development of Solutions	Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.
4. Conduct Investigations of Complex Problems	Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. Modern Tool Usage	Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling to complex engineering activities, with an understanding of the limitations.
6. The Engineer and Society	Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. Environment and Sustainability	Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. Ethics	Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. Individual and Teamwork	Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. Communication	Communicate effectively on complex engineering activities with the engineering community and with the society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. Project Management and Finance	Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. Life-long Learning	Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

#### R20:

#### **Department Vision**

To emerge as a vibrant model of excellence in education, research and innovation in Electronics and Communication Engineering.

#### **Department Mission**

## The mission of the Electronics and Communication Engineering Department is to:

- 1. To impart strong theoretical and practical knowledge of the state of art technologies to meet growing challenges in the industry.
- 2. To carry out the advanced and need renowned research and industrial organizations. based research in consultation with the
- 3. To create entrepreneurship environment including innovation, incubation and encourage to patent the work.

# PROGRAM EDUCATION OBJECTIVES (PEOs): After the completion of the program, our:

- 1. Engage successfully in professional career and/or pursue higher education in Electronics and Communication and allied areas.
- 2. Pursue research, design and development of state-of-the art systems applying the knowledge of Electronics and Communication engineering
- 3. Begin start-ups and involve in entrepreneurship activities by adopting changing professional and societal needs.
- 4. Exhibit professional ethics and values with lifelong learning and work effectively as individuals/team members in multidisciplinary projects.

## PROGRAM SPECIFIC OUTCOMES (PSOs): At the end of the program

- 1. Ability to apply the acquired knowledge of core subjects in design and development of Communications/Signal processing/ VLSI/ Embedded systems.
- 2. Analyze and solve the complex Electronics and Communication engineering problems using state-of-art hardware and software tools
- 3. Develop innovative technologies for Entrepreneurship based on the research outcomes of Electronics and Communication engineering.

#### R18:

**Vision :** To develop the department into a full-fledged center of learning in various fields of Electronics & Communication Engineering, keeping in view the latest developments.

**Mission:** To impart value based technical education and train students and to turn out full pledged engineers in the field of Electronics & Communication Engineering with and overall background suitable for making a successful career either in industry/research or higher education in India/Abroad.

#### Program Educational Objectives of B.E(ECE) Programme

- 1. Student will excel in analysing, design and development of systems in the area of Electronics and Communications.
- 2. Student will have hand on experience in executing software related applications pertaining to Electronics and Communication Engineering.
- 3. Student will carry out research in new technologies with modern relevant tools.
- 4. Student will develop with professional ethics, effective communication skills and knowledge of societal impacts of computing technologies.

#### **Program Specific Outcomes of B.E(ECE) Programme**

**PSO1:** Student will demonstrate the knowledge and understanding of basic principles of mathematics, science, electronic devices, networks and signal processing procedures in simulation, modelling, and describing the behaviour of analog and digital electronic circuit or system.

**PSO2:** Student will be able to select and apply appropriate techniques, resources and Hardware and Software tools for design, analysis and testing the various analog and digital electronic circuits and networks.

**PSO3:** Student will demonstrate self-confidence to work independently or in a team and his/her ability to Analyze, synthesize, design and test analog & digital components, process, system or sub-systems of electronics and communication Engineering used in peace as well as war applications as per the specifications.

#### R16:

Vision: To develop the department into a full-fledged center of learning in various fields of Electronics & Communication Engineering, keeping in view the latest developments.

Mission: To impart value based technical education and train students and to turn out full pledged engineers in the field of Electronics & Communication Engineering with and overall background suitable for making a successful career either in industry/research or higher education in India/Abroad.

# Program Educational Objectives of B.E(ECE) Programme

PEO1: Student will excel in analysing, design and development of systems in the area of Electronics and Communications.

PEO2: Student will have hand on experience in executing software related applications pertaining to Electronics and Communication Engineering.

PEO3: Student will carry out research in new technologies with modern relevant tools.

PEO4: Student will develop with professional ethics, effective communication skills and knowledge of societal impacts of computing technologies.

# Program Specific Outcomes of B.E(ECE) Programme

PSO1: Student will demonstrate the knowledge and understanding of basic principles of mathematics, science, electronic devices, networks and signal processing procedures in simulation, modelling, and describing the behaviour of analog and digital electronic circuit or system.

PSO2: Student will be able to select and apply appropriate techniques, resources and Hardware and Software tools for design, analysis and testing the various analog and digital electronic circuits and networks.

PSO3: Student will demonstrate self-confidence to work independently or in a team and his/her ability to Analyze, synthesize, design and test analog & digital components, process, system or sub-systems of electronics and communication Engineering used in peace as well as war applications as per the specifications

# Department Of Electronics and Communication Engineering Course Outcomes Statements for BE (ECE)-R20

		Course	atements for BE (ECE)-R20
SNo	Code	Name	Course Outcomes Statements
			Find Laplace, Inverse Laplace and solution of engineering problems.  Find the solution of Difference Equation.
	20MTC07	Applied	Understand the methods to find solution of linear and non-linear PDE and solution of wave equation.
1.		Mathematics	Solve Non-Linear algebraic and transcendental equations and first order differential equations.
			Understand the methods for analyzing the random fluctuations using probability distribution and also identify the importance of Principles of Least Squares approximations for predictions.
			Identify various data structures, searching & sorting techniques and their applications.
	20CSC06	Basics of Data Structures	Describe the linear and non-linear data structures, searching and sorting techniques.
		Structures	Apply suitable data structures to solve problems.
2.			Analyze various searching and sorting techniques.
			Evaluate the linear and non-linear data structures.
			Comprehend mathematically the coordinate systems and solve simple static Electromagnetic problems using various laws and theorems.
		Electromagnetic	Understand Maxwell's equations in different forms (differential and integral) and apply them to diverse engineering problems.
	20ECC01	Theory and	Demonstrate the Electromagnetic wave properties with respect to
3.		Transmission Lines	different transmission mediums.  Predict the behavior of reflection and refraction of the waves in
			different mediums.
			Estimate the transmission line properties, reflection, and matching concepts.
			Demonstrate understanding of the characteristic behaviour of various electronic devices such as Diodes, Transistors etc.
			Apply the acquired knowledge in the analysis of various diode and Transistor circuits.
	20ECC02	Electronic Devices	Compare and Contrast the characteristics of BJT and FET in various configurations.
4.			Evaluate the performance parameters of various diode circuits (rectifiers, clippers and clampers) and Transistor circuits.
			Choose an appropriate electronic device for a specific application and discuss IC fabrication process
			Recall basics of electrical circuits with nodal and mesh analysis.
			Illustrate electrical theorems for AC and DC Circuits.
	2015/07/2		Develop time domain and frequency domain analysis for circuits.
	20ECC03	Network Theory	Analyze the electrical network and two port network parameters
5.			for different applications i.e., magnetic coupled circuits, Filters.  Synthesize different network functions using Foster and Cauer
			form.
			Classify signals, systems and analyse the signals using Transform techniques.
	20ECC04	Ciamala and Cristoma	Evaluate signal characteristics using time and frequency domain analysis.
6.	200004	Signals and Systems	Assess the system stability and causality using ROC and Pole-Zero Plot.
			Describe the sampling process and analyse the DT Signal/systems using DTF and Z-Transform.
			Apply the Convolution and correlation concept for analysis of Signal and systems

DEPARTMENT OF ECE

Chairanya Bharathi Institute of Technolog Hyderapart-C00 075

		Course	
SNo	Code	Name	Course Outcomes Statements
7.	20CEM01	Environmental Science	Identify the natural resources and realise the importance of water, food, forest, mineral, energy, land resources and effects of over utilisation.  Understand the concept of ecosystems and realise the importance of interlinking of food chains.  Contribute for the conservation of biodiversity.  Suggest suitable remedial measure for the problems of environmental pollution and contribute for the framing of legislation for protection of environment.  Follow the environmental ethics and contribute to the mitigation and management of environmental disasters.
8.	20CSC07	Basics of Data Structures Lab	Implement the abstract data type  Demonstrate the operations on stacks, queues using arrays and linked lists.  Apply the suitable data structures including stacks, queues to solve problems.  Analyse various searching and sorting techniques.  Choose proper data structures, sorting and searching techniques to solve real world problems.
9.	20ECC05	Electronic Devices Lab	Demonstrate the characteristic behaviour of PN junction diode, Zener diode and special purpose semiconductor diodes.  Design various non-linear wave shaping circuits using diodes for a given specification.  Analyse the behaviour of non-linear wave shaping circuits using diodes.  Examine the characteristics of BJT and FET in various configurations.  Evaluate and compare the significant parameters obtained from the characteristics of BJT and FET
10.	20ECC06	Electronic Workshop and Networks Lab	Identify and measure the passive and active components using electronic equipment.  Apply Network theorems to AC and DC Circuits.  Determine and analyze two port network parameters.  Design and verification of attenuator and filters.  Simulation of different networks and circuits using the simulation software
11.	20ECI01	MOOCs/Training /Internship	
12.	20ECC07	Analog Circuits	Recall and relate the knowledge of BJT and FET behavior in the design of various biasing and amplifier circuits.  Apply low and high frequency models of transistor in the analysis of single stage and multistage amplifiers.  Design and analyze amplifier and oscillator circuits  .Compare and Contrast different types of biasing, Multistage, Feedback and Power amplifiers.  Interpret a given analog circuit and evaluate its performance parameters by Epatonia acquired knowledge.

DEPARTMENT OF ECE

Chanaciya Bharathi Institute of Technolog Hyderapad-500 075

		Course	
SNo	Code	Name	Course Outcomes Statements
			Understand the various linear and nonlinear modulation schemes.
			Design various transmitters and receivers.
	20ECC08	Analog Communication	Assess a random signal by computing various statistical properties.
13.		Communication	Evaluate the performance of analog communication system through the estimation of noise.
			Infer the concepts of various pulse modulation schemes.
			Understand the basic parameters of an antenna.
			Extend current distribution concept in order to estimate the field patterns.
	20ECC09	Antennas and Wave	Appraise the concepts of broad side and end fire arrays
	2012009	Propagation	Understand the working principle and characteristics of various
14.			antennas.
			Study the behavior of radio waves in various modes of wave propagation
			Distinguish the closed-loop control systems from open-loop control systems and develop mathematical models in time
			domain (differential equations, state equations) and S-domain
			(Transfer function using Laplace transform).
			Evaluation of transfer function from block diagram and signal flow graph by using block diagram reduction techniques and
	0000010	Control	Mason gain formula, respectively.
15.	20ECC10	Systems	Investigate the stability of control system via Routh-Hurwitz
13.			criteria, Root-locus method and Nyquist Plot
			Utilize standard test signals to analyze the time response of first and second-order control systems and frequency response
			analysis of the control system.
			Design and develop various controllers and compensators to control the steady state error, stability and transient response
			Understand the basic concepts related to digital system design.
		Digital Systems	Design the combinational and sequential circuits.
16.	20ECC11	Design	Analyze the behavior of the digital system design
			Develop the digital system using various Verilog HDL modeling.
			Apply the design concepts of digital system using Verilog HDL.
			Students are expected to become more aware of themselves, and their surroundings (family, society, nature)
			They would become more responsible in life, and in handling
			problems with sustainable solutions, while keeping human
		Universal Human	relationships and human nature in mind.
	20EGM03	Values II:	They would have better critical ability.  They would also become sensitive to their commitment towards
17.		Understanding Harmony	what they have understood (human values, human relationship,
'''			and human society).
			It is hoped that they would be able to apply what they have
			learnt to their own self in different day-to-day settings in real life, at least a beginning would be made in this direction
			Understand the making of the Indian Constitution and its
		Indian Constitution	features.
18.	20EGM01	and Fundamental	Identify the difference among Right To equality, Right To
16.		Principles	freedom and Right to Liberty.  Analyze the st ructuring of the Indian Union and differentiate the
			powers between Union and States
			Distinguish between the functioning of Lok Sabha and Rajya Sabha while appreciating the improvement of Lok Sabha and Rajya
			Sabha while appreciating the importance of Judiciary.  Differentiate betweeth Alte functions underlying Municipalities, Panchayats and Communicipalities,
			Panchayats and Co-operative Societies.

Chaitatiya Bharathi Institute of Techi.....

Hyderapart-100 075

SNo		Course	Course Outcomes Statements
5110	Code	Name	
			Understand philosophy of Indian culture
	20501402	Indian	Distinguish the Indian languages and literature.
	20EGM02	Traditional Knowledge	Learn the philosophy of ancient, medieval, and modern India.
19.		Kilowieuge	Acquire the information about the fine arts in India.  Know the contribution of scientists of different eras.
			Design various BJT/FET biasing circuits to identify the
			appropriate circuit for faithful amplification.
			Experiment with single stage and multistage BJT/FET
			amplifiers including large signal amplifiers.
	20ECC12	Analog Circuits Lab	Compare and contrast different types of feedback topologies.
20.			Develop and test various oscillator circuits.
			Evaluate and compare the significant parameters obtained from
			the Frequency response plots of BJT and FET amplifier circuits.
			Demonstrate the generation and detection of various analog
			modulated signals.
21.			Illustrate the sampling concept and interpret the generation and
		Analog	detection of various pulse modulated signals.
	20ECC13	Analog Communication Lab	Obtain and Analyze frequency response of Pre-Emphasis and De Emphasis circuits
		Communication Lab	Experiment with Mixer, Radio receiver and PLL characteristics,
			FDM and TDM.
			Estimate the Power spectral density of noise and SNR and
			analyze the spectra of AM and FM signals.
			Design a Digital circuit using Verilog HDL.
		D: : 10	Understand various abstraction levels of a digital design.
22.	20ECC14	Digital Systems	Verify the functionality of a design using Test bench
		Design Lab	Simulate and synthesize combinational logic circuits.
			Simulate and synthesize sequential logic circuits.
			Apply fixed and floating-point arithmetic algorithms.
			Understand how the computer works.
		Computer Architecture	Classify different organizations of CPU and I/O.
23.	20ECC15	and Microprocessors	Compare various memories and memory access techniques.
		and microprocessis	Understand the architecture and instruction set of a
			microprocessor.
			Understand the concept of pulse digital modulation schemes and
			compare their performance.
			Interpret the concept of information theory and apply source
		Digital	coding schemes.
24.	20ECC16	Communication	Demonstrate various error control schemes and develop the encoding and decoding techniques to detect and correct the
			errors.
			Analyze different digital modulation schemes and can compute
			the bit error performance.
			Identify and apply spread spectrum modulation techniques.
			Apply the concept of DFT and FFT for signal processing applications.
			Implementation of IIR filters for the given specifications.
			Design FIR filters for the given specifications.
25.	20ECC17	Digital Signal	Interpret the concepts of Multi-rate digital signal processing and
50:200000000000000000000000000000000000		Processing	its applications.
			Understand the architecture features of TMS320C67XX
			processor.
		Lingar and Digital	Understand the basic construction, characteristics and parameters of Op-Amp.
Name of the last o		Linear and Digital	Analyze the linear and nonlinear applications of Op-Amp.
26.	20ECC18	Integrated Circuits	Explain the concepts of IC555 timer, IC723 regulator, memories
			and PLD
			.Classify and describe the characteristics of different logic
			lamines
			Design logic functions of Combinational and Sequential circuits with ICs.
			DEPARTMENT OF ECE

Chalta: ya Bharathi Institute of Technolo Hyderapari-COO 075

CNI		Course	Common Outromos States 4
SNo	Code	Name	Course Outcomes Statements
			Apply fundamental knowledge of Managerial Economics concepts and tools.
27.		E i E E	Analyze various aspects of Demand Analysis, Supply and Demand Forecasting
27.	20MBC01	Engineering Economics and Accountancy	Understand Production and Cost relationships to make best use of resources available
			Apply Accountancy Concepts and Conventions and preparation of Final Accounts.
			Evaluate Capital and Capital Budgeting decision based on any technique
			Justify the importance and use of CAD tools.
			Differentiate design flow for different types of ASIC.
	20ECE01	CAD for VLSI Verification	Understand the design flows of CADENCE Virtuoso, CADENCE NCLaunch and XILINX ISE
28.			Understand the importance of design for testability
			Differentiate various type of simulators.
			Select necessary components required in modern optical communications systems.
29.		Optical	Analyze various distortions in optical fibers.
	20ECE02	Communication	Distinguish the various Optical sources and Optical detectors
		Communication	Examine the Power Launching and Coupling and fiber optical receiver.
			Determine the performance of Optical Communication link.
			Apply and analyse discrete random process concepts in communications.
30.			Understand binary hypothesis techniques
	20ECE03	Signal Detection	Analyse the various statistical decision techniques.
		Techniques	Demonstrate the various binary detection techniques and M-ary detection.
			Evaluate various CFAR detectors.
			Analyze the various functions used in embedded C programming
			Understand the evaluation of Arduino family and its development board details.
31.	20ECE04	Embedded C Programming	Interface the sensors and various i/o devices to embedded development board
			Apply the concepts of IoT to embedded development board
			Demonstrate and design embedded C based applications
			Understand and compare the Super-heterodyne receiver, SDR and CR.
			Analyze the basic architecture of SDR
32.	20ECE05	Software Defined	Determine the processor based on the application
	2020203	Radio	.Evaluate and choose the various spectrum sensing methods
			based on application.  Choose the USRP and WARP boards based on the facilities
			required for an SDR application.
			Understand the basics of AI and intelligent agents.
		Dringiples and	Apply Expert Systems to solve real time problems
	20ECE06	Principles and Applications of	Understand knowledge representation methods.
33.	ZUECEUO	Applications of AI	Build algorithms using neural network techniques for various applications
			Solve the various classification problems like object recognition

CN		Course	C
SNo	Code	Name	Course Outcomes Statements
			Illustrate linear convolution and correlation using MATLAB.
			Design the digital filters using MATLAB.
	20ECC20	Digital Signal	Examine the performance of multirate techniques using
34.	20ECC20	Processing Lab	MATLAB.
			Experiment with decimator and interpolator on DSP processor.
			Implement the digital filters on DSP processor
			Analyze the configurations, parameters of Op-Amp (IC741).
1		7 :	Demonstrate the circuits of Op-Amp for various applications.
		Linear and Digital	Design the circuits using IC555 timer, IC723 and data
	20ECC21	Integrated	converters.
35.		Circuits Lab	Determine the characteristics of TTL and CMOS gates
		(9-11-1-11-11-11-11-11-11-11-11-11-11-11-	Develop various combinational circuits and sequential circuits using digital ICs.
			Understand Engineer's responsibilities and ethics
			Use various materials, processes, products and quality control
36.		Industrial/Rural	Provide innovative solutions to solve real world problems
50.	20ECI02	Internship	Acquire knowledge in technical reports writing and presentation
		memomp	Apply technical knowledge to real world industrial/rural
			situations
			Understand the architectures of different microcontrollers to
			enable to design of applications using them.
37.			Develop code both in assembly and in high level language for
		)	various applications of microcontrollers.
	20ECC22	Microcontrollers	Analyze and develop applications by using on-chip peripherals of different microcontrollers.
			Interface various I/O Modules with 8051 microcontrollers.
			Apply theoretical learning to practical real time problems for
			automation.
			Model a digital design using Advanced Verilog HDL constructs.
			Analyse the characteristic behavior of MOSFET and discuss CMOS circuit Design Process
38.	20ECC23	VLSI Design	Explain various process steps involved in IC fabrication.
56.			Design various NMOS and CMOS based logic circuits.
			Discuss the concepts of subsystem designs and Testing.
			Explain the concepts of PLDs, CPLDs and FPGAs
		_	.Analyze and compare the various architectures of CPLD and
	20ECE13	CPLD and FPGA	FPGA and its programming technologies.
39.	2000013	Architectures	Implement various logic functions on PLDs, CPLDs and FPGAs
-2.			Understand the concepts of placement and routing and classifying ASICs.
			Demonstrate VLSI tool flow for CPLDs and FPGAs.
			Recall the theory and principles of information theory and
			channel Coding.
			Design and analyze the encoding and decoding circuits for
	2050514	Coding Theory and	various coding techniques.  Apply the principles of abstract algebra, finite fields and its
40.	20ECE14	Techniques	extension to design related codes.
			Examine the error detection and correction capability of coding
			techniques for digital communication.
			Evaluate the performance of error control codes using different
			decoding algorithms.

SNo		Course	Course Outcomes Statements
2140	Code	Name	CHO + CHANG (1) CT (1974) . The Will Chang T. The TOTAL CHANGE AND THE TOTAL THE TOTAL CHANGE AND THE TOTAL CHANGE
			Interpret the basics concepts of multirate digital signal processing.
		Multirate and	Implement the multirate filter bank structures.
41.	20ECE15	Wavelet Signal	Explore the MRA and classes of wavelets
41.		Processing	.Understand the basic concepts of the continuous and discrete
			wavelet transform.
			Explain the special topics such as wavelet packets and Biorthogonal wavelets.
			Understand Real-time operating system requirements and
			applications.
			Categorize different scheduling approaches for real time
42.	20ECE16	Real Time Operating	scheduler.
tunismine(d		Systems	Differentiate various RTOS features and POSIX standards
			Analyze the inter task communication in RTOS.
			Apply the Linux based embedded system design process
			Understand the challenges in energy efficiency and spectral
			efficiency for digital data transmission.
			Conceptualize significant energy efficiency trade off in green
			wireless networks. Apply the basics of Python programming
43.	2000014	Green Communication	language, which is used in many IoT devices.
	20ECE17		Apply the methods to manage the dynamic loads of mobile
			communications for energy saving.
			Indicate the design practices for power minimization at cellular base station.
			Implement cell deployment strategies for efficient network
			management.
			Comprehend the key concepts of fundamental cryptography
			techniques which are required for Blockchain Technology.
	20ECE18		Describe the key concepts and compare various models of
		Cryptography	Blockchain Technology.
44.	ZULCLIU	and Block Chain	Understand consensus mechanism in Blockchain.
		Technology	Acquire knowledge regarding cryptocurrency transactions and
			their validation.
			Apply the concepts of Blockchain technology in real world
			Scenario.
			Understand the concepts of testing for VLSI circuits.
			Apply techniques to improve testability of VLSI circuits.
		Design for	Utilize logic simulation methods such as ATPG in testing of VLSI circuits.
45.	20ECE19	Testability	Analyze the concepts of BIST in testing of VLSI circuits.
A550700000			Evaluate various Testing methods
			Demonstrate the fundamental concepts of Orbital Aspects and Orbital Mechanics
November	207070	Satellite	Identify the mechanisms for placing satellites and examine the orbital effects on satellites, launch mechanisms.
46.	20ECE20	Communication	Compare the Multiple access techniques for satellite
			communications and demonstrate the satellite subsystems.
			Design an appropriate satellite communication link for the given
			specifications
			Inspect the working principle and related aspects of DBSTV and
			VSAT.

CNI		Course	Course Outcomes Statements
SNo	Code	Name	Course Outcomes Statements
			To Learn image representation.
45			Apply Image enhancement and segmentation techniques both in spatial and frequency domain.
47.	20ECE21	Image and Video	To reduce the redundancy in both lossy and lossless compression models.
		Processing	Apply 2D-Motion estimation algorithms and develop predictive coding.
			Creatively apply contemporary theories, processes and tools in the development and evolution of solutions to problems related to image and video processing.
			Understand the fundamentals of the embedded systems.
			Analyze the hardware and software details of the embedded systems.
40	20ECE22	Embedded Systems	Design interfacing of the systems with other data handling / processing systems.
48.			Evaluate the performance of an embedded system using various debugging tools.
			Apply the embedded design approach for various applications.
			Understand the basic principles of Non Uniform and Planar
			antenna arrays.
49.			Comprehend the necessity of smart antenna and smart antenna configuration.
		Smart Antennas	Understand the DOA estimation methods and compare different
	20ECE23	Smart / memas	algorithms for DOA estimation
			Analyze various beamforming algorithms used in a smart
			antenna system
			Describe the fundamentals of the MIMO and RDA antenna systems.
			Explain data science fundamentals
Who was a series			Explore the principles of probability and statistical theory
50.	20ECE24	Data Analytics for Signal	Understand various machine learning algorithms using applied statistics
		Processing	Analyze supervised and unsupervised learning models with regression and classification techniques
			Construct various applications of image and speech processing using MATLAB/Python
			Understand Op-Amp based designs
			Explain various performance measures of Data converters
	20ECE25	CMOS Data	Design and analyze mixed mode circuits such as Comparator,
51.		Converters	switched capacitor and sample & hold circuits
			Design and analyze an A/D or D/A converter circuits.  Explain principles of oversampling
			Recall the requirements and key functionalities of 4G LTEA/5G
			NR technology.
			Compare various channel access technologies, modulation
50	20ECE26 5G	Communications	techniques used in 5G wireless systems
52.			.Illustrate the architecture of 5G and its NextGen core network.
			Apply the 5G concepts to D2D communications.  Demonstrate the concept of massive MIMO
			Demonstrate the concept of massive MIMO

SNo		Course	0
5110	Code	Name	Course Outcomes Statements
53.	20ECE27	DSP Processors and Architectures	Classify the differences between DSP Processor and General-Purpose processor.  Understand the basic architectural needs of Programmable DSPs Explain the architecture features of TMS320C55XX processor.  Develop on interface with TMS320C55XX processor to external peripherals.  Design and implement of various signal processing algorithms using 55xx processor.
54.	20ECE28	Advanced Microprocessors and Applications	Understand the historic evaluation of 80286,386,486  Explain the basic and advance Pentium features & architecture.  Analyze the Memory Management mechanisms employed in advanced Microprocessors.  Understand the concepts related to SoC Design  Demonstrate and design a microprocessor based applications
55.	20ECE29	Principles of GNSS	Demonstrate the fundamental concepts of communications in understanding of GPS architecture, operation and signal structure.  Apply the principles of orbital mechanics, time references, coordinate systems and range measurements in estimating user position  Examine the effect of various error sources and satellite geometry on position estimates and analyze the suitability of a given data format.  Compare the architecture and working of other GNSS systems and make use of GNSS systems in a variety of civilian and defense applications  Relate the knowledge of DGPS techniques in understanding augmentation systems
56.	20ECE30	Pattern Recognition using Machine Learning	Understand the concepts of pattern recognition.  Apply the parametric and linear models for classification.  Design algorithms using neural networks for machine learning problems.  Implementation of Support Vector Machines (SVM) algorithm for real time applications.  Evaluate various unsupervised clustering techniques.
57.	20BTO01	Biology for Engineers	Appraise the values of Biology in classical and modern time Develop modern instruments related to skeletal, nervous, and circulatory system Apply concept of respiratory, excretory and assisted reproductive process for developing related instruments Illustrate the modern interdisciplinary tools related to medical biotechnology and bioremediation Summarize the basic knowledge about nucleic acids, proteins and their sequencing
58.	20CSO08	Basics of Machine Learning	Define the basic concepts related to Python and Machine Learning.  Describe the feature engineering methods, regression techniques and classification methods  Apply Python packages for data visualization, text and time series data analysis using NLP toolkit  Evaluate and interpret the results of the various machine learning techniques  Solve real world problems using deep learning framework

Understand the evolution of IP, working of organization's at global level to protect and promote IP.  Familiarize with the patent filling process at national and international level. Draw the logical conclusion of research, innovation and patent filling. Compare different kinds of IP and their patenting system. Understand the techno-legal-business angle of IP, infringement and enforcement mechanisms for protection.  To understand fundamentals of object-oriented programming paradigm. To apply knowledge of string handling, interfaces, packages and inner classes. To develop web applications using Servlets and JSP. Compute basic mathematical operations on Quantum bits. Will be able to execute Quantum operations of Quantum computing  To built quantum programs Develop quantum Logical gates and circuits. Develop the quantum algorithm Classify the difference between FMS and DBMS; describe the roles of different users and the structure of the DBMS. Design the database logically using ER modeling Outline the schema of the relational database and key constraints. Develop queries using DDL, DML and DCL of SQL. Identify the inference rules for functional dependencies and apply the principles of normal forms to decompose the relations in a database Summarize the concepts of dense, sparse, ISAM and B+ tree indexing and get familiar with states and properties of transactions.  Interpret the locking, time stamp, graph and validation-based protocols for concurrency control. 6. Summarize lop-based recovery techniques to increase the robustness of the database, identify to resolve the deadlocks in the transactions.	CNT	<del></del>	Course	Course Outcomes Statements

Compare different kinds of IP and their patenting system.				global level to protect and promote IP.  Familiarize with the patent filing process at national and international level.
Object Oriented Programming Using JAVA	59.	20MEO07	Rights	filing.
Develop the cultum algorithm  62. 20CSO99 Fundamentals of DBMS  63. 20ECC24 Fundamentals of DBMS  Electronic Design and Automation Lab  Electronic				
Object Oriented Programming Using JAVA   To apply knowledge of string handling, interfaces, packages and inner classes. To implement Exception handling mechanisms and Multithreading. To dewelop web applications using Servlets and JSP. Compute basic mathematical operations on Quantum Diss. Will be able to execute Quantum operations of Quantum Computing To built quantum programs Develop quantum Logical gates and circuits. Develop the quantum algorithm Classify the difference between FMS and DBMS; describe the roles of different users and the structure of the DBMS. Design the database logically using ER modeling Outline the schema of the relational database and key constraints. Develop queries using DDL, DML and DCL of SQL. Identify the inference rules for functional dependencies and apply the principles of normal forms to decompose the relations in a database. Summarize the concepts of dense, sparse, ISAM and B+ tree indexing and get familiar with states and properties of transactions. Interpret the locking, time stamp, graph and validation-based protocols for concurrency control. 6. Summarize log-based recovery techniques to increase the robustness of the database, identify to resolve the deadlocks in the transactions. Develop HDL codes/scripts with appropriate syntax Apply an appropriate modelling style to describe various combinational and sequential circuits in Verilog HDL Examine the successful execution of the codes/ schematic using various digital circuits on hardware boards like FPGA. Develop the programs of 8051 and ARM using their respective instead of the successful execution of the codes available to program different microcontrollers. Build code for 8051 and ARM 7 based embedded systems for various aphtifications.

SNo		Course	Course Outcomes Statements
5110	Code	Name	
			Formulate mini project proposal through literature survey.
65.			Plan, design and analyze the proposed mini project
05.	20ECC26	Mini Project	To simulate and execute the mini project for validation.
			Enhance oral presentation skills.
			Prepare and submit the mini project report.
			Become effective communicators, participate in group
			discussions with confidence and be able to make presentations in a professional context
66.			.Write resumes, prepare and face interviews confidently.
00.	2050003	Employability Chille	Be assertive and set short term and long term goals, learn to
	20EGC03	Employability Skills	mange time effectively and deal with stress.
			Make the transition smoothly from campus to work, use media
			with etiquette and understand the academic ethics
			.Enrich their vocabulary, frame accurate sentences and comprehend passages confidently.
			Relate the communication tasks with basic concept of
			networking, protocols and Service models at different layers and
			Interpret the Design issues of Data link layer using protocols and services.
<b>67</b>	20ECC27	Computer Networks	Apply random accessing Protocols for Medium Access Control.
67.	20ECC27	Computer Networks	Examine the performance of network and Internetworking with
			routing algorithms and the congestion control approaches
			Understand the transport layer and Application Layer concepts.
			Demonstrate the Application layer Protocols  Apply the wave equations and their solutions to analyze the
			waves in the waveguides
68.			.Determine the scattering matrix for various microwave
00.	20ECC28	Microwave and Radar	components.
	20ECC28	Engineering	Analyze the interaction of electron beam and RF field for
			various microwave sources.  Examine the principles of operation of pulse, CW and MTI radar
			system.
	_		Compare different types of tracking radars.
			Describe the various processing steps (including base materials,
			layers, clean room) involved in the IC fabrication
			Illustrate the crystal growth, wafer processing and cleaning methods
69.	20ECE31	VLSI	Analyze the oxidation and lithography processes with its
09.		Technology	parameters
			Explain the doping and etching methods used in IC fabrication
			Outline the deposition, packaging and testing concepts applied
			for VLSI circuits
			Understand the concepts of Ad Hoc Networks and Wireless Sensor Networks.
	2000000	Mobile Adhoc and	Analyse different routing algorithm for Ad Hoc Networks and
70.	20ECE32	Sensor Networks	Wireless Sensor Networks.
			Acquire the knowledge of various protocols of Mobile Ad Hoc and Sensor Networks
			Discuss various security practices in Ad Hoc and sensor
			networks.
			Comprehend various sensor network platforms, tools and
			applications.

CNI		Course	Course Outcomes Statements
SNo	Code	Name	
			Understand the basic characteristics of speech signal in relation to production and hearing of speech by humans.
	2000000	Speech	Analyze speech and extract features for speech applications.
	20ECE33	Processing	Distinguish between different speech coding techniques.
71.			Use dynamic warping and HMM for real time problems.
			Design the various applications like recognition, synthesis, and
			coding of speech
			Understand the terminology, enabling technologies, and various protocols of IoT.
			Illustrate the concepts of Machine to Machine, SDN, and NFV
			and build simple IoT systems using Raspberry Pi board,
			NodeMCU, and BeagleBone Black.
72.	20ECE34	IoT and its	Apply the basics of Python programming language, which is
		Applications	used in many IoT devices.
			Create the steps involved in IoT system design methodology.
			Develop web applications using a python-based framework
			called Django and IoT technologies for domain-specific applications.
			Understand the fundamental concepts of remote sensing.
			Appreciate types of remote sensing and digital imaging.
73.		Remote Sensing	Apply Microwave remote sensing techniques and understand the
75.	20ECE35		process of photogrammetry
			Interpret images visually.
			Apply Digital image processing techniques.
			Familiarize the basic concepts of Computer Security and
			Security Attacks, Services, Mechanisms, Design principles.
74.			Understand the Symmetric Encryption and Message
			Confidentiality principles and operation.
	20ECE36	Network Security	Demonstrate the Public-Key Cryptography and Message
	ZULCESU	Tiothorn booming	Authentication algorithms
			Examine the Key Distribution using symmetric and asymmetric
			encryption and User Authentication using PublicKey
			Infrastructure.  Apply Network Security and System Security approaches for
			different applications.
			Identify and understand the concepts of hazards, causes and
			impacts of disasters.
			Develop a critical capacity to evaluate the principles and
75.			practices of disaster risk reduction and management
75.			Develop a deep awareness of disaster resilience, risk mitigation,
	20CEO02	Disaster Risk	and recovery policies as they arise from natural hazards around
		Reduction and	the globe;
j		Management	Apply knowledge about existing global frameworks and
			existing agreements and role of community in successful
			Disaster Risk Reduction
			Evaluate DM study including data search, analysis and presentation as a case study
			Understand the concept and essence of entrepreneurship
	20145004	Principles of	.Identify business opportunities and nature of enterprise.  Analyze the feasibility of new business plan.
76.	20MEO04	Entrepreneurship	Apply project management techniques like PERT and CPM for
-			effective planning and execution of projects
			Use behavioral, leadership and time management aspects in
	i .	i	

CN		Course	Course Outcomes Statements
SNo	Code	Name	
77.	20CSO01	Fundamentals of	Define Virtual Reality and describe the components of a VR system, input and output devices of virtual reality systems.  Apply geometric modeling to model real world scenarios.  Develop interfaces by using visual physiology, visual perception
//.	2003001	Virtual Reality	and audio.  Evaluate virtual reality systems for usability.
			Explore the applications of VR systems in defense and telerobotics.
			Explore data operations on list, tuple and dictionary in python.
			Understand deployment of models on different datasets.
78.	20ADO01	Introduction to Python Programming	Apply supervised, unsupervised, resembling and NLP models on different datasets.
			Perform data analysis using python packages.
			Build and evaluate the models using python programming
			Communicate effectively, without barriers and understand
			aspects of technical communication.
1			Differentiate between general writing and technical writing and
79.	20EGO01	Technical Writing	write error free sentences using technology specific words  Apply techniques of writing in business correspondence and in
		Skills	writing articles.
			Draft technical reports and technical proposals.
			Prepare agenda and minutes of a meeting and demonstrate
			effective technical presentation skills
			Understand the technologies required for developing web application.
			Identify and choose XHTML tags, CSS and java scripts to develop well-structured and easily maintained web pages.
80.	20CSO02	Introduction to Web Technology	Design and Develop interactive and innovative web pages using various platforms/technologies like XHTML, CSS, XML, JAVASCRIPT.
			Create and deploy web applications in web server by using
			server-side programming concepts like PHP
			Build a data driven web site using Databases. 6. Evaluate different web applications to implement optimal solutions for real time problems
			Understand the difference between "Sex" and "Gender" and be
			able to explain socially constructed theories of identity.
			Recognize shifting definitions of "Man" and "Women" in
			relation to evolving notions of "Masculinity" and "Femininity"
		Gender	Appreciate women's contributions to society historically,
	20EGM04	Sensitization	culturally and politically.
	6		Analyze the contemporary system of privilege and oppressions, with special attention to the ways gender intersects with race,
81.			class, sexuality, ethnicity, ability, religion, and nationality.
			Demonstrate an understanding of personal life, the workplace,
			the community and active civic engagement through classroom learning.
			Apply fundamental principles of computer networking
			Examine the performance of design issues of Link layer
82.	20ECC29	9 Computer Networks	Construct a network and measure its performance with different routing algorithms.
		Lab	Create a wired and wireless Network.
			Analyze performance of various Network protocols.

CNI		Course	Course Outcomes Statements
SNo	Code	Name	
			Analyse various software and hardware components required for IoT technology.
			Interface analog and digital sensing & actuating equipment using Raspberry Pi
83.	20ECC30	IoT and Simulation Lab	.Learn how to build basic applications in the LabVIEW graphical programming environment.
			Develop an ability for programming in LabVIEW using various program structures, plotting the graphs and charts for system monitoring, processing, and controlling.
			Apply knowledge of IoT and Virtual Instruments to solve engineering problems.
			Examine the characteristics of RKO and Gunn Oscillator.
		Microwave	Compare the relation between guide wavelength, free space wavelength and cut off wavelength.
	20ECC31	Engineering Lab	Measure VSWR for various loads at microwave frequencies.
84.			Estimate the microwave power ratios at various ports of
2 055 1753			microwave components.
			Evaluate unknown impedance of various microwave loads.  List the various approaches to the selected problem.
			Interpret the advantages and disadvantages of various
			approaches.
85.	20ECC32		Apply the selected approach for simulating / modeling /
05.	20ECC32	Project: Part-1	designing the problem
			Analyse and write a report on the results of the
			simulation/modeling of the problem selected.  Justify and present the results of the simulation/modeling /
			design before the departmental committee.
			Understand Engineer's responsibilities and ethics
		* 1	Use various materials, processes, products and quality control
86.	20ECI03	Industrial Internship	Provide innovative solutions to solve real world problems
		memsmp	Acquire knowledge in technical reports writing and presentation
			Apply technical knowledge to real world industrial situations
			Analyze and evaluate the cyber security needs of an organization.
87.			Determine and analyze software vulnerabilities and security solutions to reduce the risk of exploitation.
67.	20CSO10	Basics of Cyber Security	Measure the performance and troubleshoot cyber security systems.
			Implement cyber security solutions and use of cyber security,
			information assurance, and cyber/computer forensics
			software/tools.
			Applying operational and cyber security strategies and policies.  Recognize the basic fundamentals of vision and describe the
			scope of challenges.
88.	20CSO14	Fundamentals of	Develop algorithms to analyze feature detection and feature alignment.
	20CSO14	Computer Vision	Analyze images and videos for problems such as tracking and structure from motion.
			Choose object, scene recognition and categorization algorithms for real time images.
			Apply various techniques to build computer vision applications

SNG		Course	Course Outcomes Statements
SNo	Code	Name	The Springer of the Springer production realization and appearable
			Efficiently store and manipulate dense data in arrays with Numpy
89.	20ADO02	Data Analysis	Apply high level mathematical functions to aggregate, broadcast, index and sort multidimensional arrays.
69.		and Visualisation	Create Series and DataFrame objects to operate on datasets
			Perform Data cleaning, transformation, merging, aggregation on datasets.
			Apply 2-D and 3-D plotting techniques on datasets
			Describe the basic components, specifications and applications of the Robots.
			Understand transformations, direct and inverse kinematics of robots.
90.	20MEO01	Robotics	Calculate forces in links and joints of a robot and find the singularities, Jacobian and trajectory planning of a robot for various tasks
			Classify drives, sensors and grippers for various applications.
			Program a robot to predict motions for a given task with machine
			vision and sensors.
			Understand the Basics and applications of Digital Manufacturing and Industry 4.0.
91.			Understand the role of Additive Manufacturing, Virtual
91.	20MEO15	Principles of Industry 4.0	prototyping and Reverse Engineering processes and their
			adaptability to Digital Manufacturing.
			Understand the concepts of digital manufacturing based product
			life cycle and its management. Understand the concept of Industry 4.0 and allied technologies
			Understand the basics of Internet of things and cloud computing
			pertaining the fourth industrial revolution
			Explain the need of Data Science to analyze the skill sets of data scientists.
92.	20ADO03	Fundamentals of	Describe the Data Science Process and its components interact.
	20ADO03	Data Science	Apply basic machine learning algorithms for predictive
			modeling.  Simplify a real-world problem into mathematical terms.
			Create effective visualization of given data
			Collect, Organize, Analyze and Consolidate information about
			emerging technologies from the literature.
			Exhibit effective communication skills, stage courage, and
93.	20ECC33	Technical	confidence.
		Seminar	Demonstrate intrapersonal skills.
			Explain new innovations/inventions in the relevant field.
			Prepare and experience in writing the Seminar Report in a prescribed format.
			Recall the details of the approach for the selected problem.
			Interpret the approach to the problem relating to the assigned topic.
94.	20ECC37	Droinate David 2	Determine the action plan to conduct investigation.
94.	20ECC37	Project: Part-2	Analyze and present the model / simulation /design as needed.
			Evaluate, present and report the results of the analysis and justify
			the same

## CHAITANYA BHARATHI INSTITUTE OF TECHNOLOGY (Autonomous)

### **Gandipet, Hyderabad -75**

# Department Of Electronics and Communication Engineering Course Outcomes Statements for BE (ECE)-R18

C		Course	Course Outcomes Statement
S.no.	Code	Name	Course Outcomes Statements
1	18MT C07	Applied Mathematics	Solve Linear and Non-Linear PDE and wave equations.  Use Laplace transforms to solve initial value problems and Z transforms to difference equations.  Calculate the approximate roots of transcendental equations.  Analyse the analytical and empirical solution of first order ordinary differential equations.  Identify the random phenomena by various
2	18CS C05	Basics of Data Structures	probability distributions  Upon completion of this course, the student will be able to Understand the basic concepts of data structures  Upon completion of this course, the student will be able to Understand the notations used to analyze the performance of algorithms.  Upon completion of this course, the student will be able to Choose and apply an appropriate data structure for a specified application  Upon completion of this course, the student will be able to Understand the concepts of recursion and its applications in problem solving.  Upon completion of this course, the student will be able to Develop the suitable data structure for real world problem.  Upon completion of this course, the student will be able To Demonstrate a thorough understanding of searching and sorting algorithms.
3	8EC C01	Electromagnetic Theory and Transmission Lines	comprehend mathematicallythe coordinate system and solve simple static electromagnetic problemsusing various laws and theorems  Understand Maxwell Equations in different forms(differential and integral) and apply them to diverse engineering problems  Demonstrate the Electromagnetic wave properties with respect to different transmission mediums  Predict the behaviour of reflection and refraction of the waves in different mediums  Estimate the transmission line propertie, reflection and matching concepts

Demonstrate understanding of the characteristic behaviour of various electronic devices such as Diodes, Transistors etc. Apply the acquired knowledge in the analysis of various diode and Transistor circuits. Compare and Contrast the characteristics of BJT and FET in various configurations Evaluate the performance parameters of various diode circuits (rectifiers, clippers and clampers) and Transistor circuits. Choose an appropriate electronic device for a specific application and discuss IC fabrication process Apply basic concepts of electric circuits and also simplify using network theorems. They will also be able to find Solution to networks using topological description. Analyze RL,RC,RLC circuits using Transient and Steady State Responses for de and ac input signals. Represent vector, phasor diagrams and also find power calculations for ac circuits. They will be able to classify dot convention rules, self and mutual inductance for simple magnetic coupled circuits.  Discuss complex frequency analysis to series and parallel resonanticircuits. Students will be able to compare Z,Y,H, two port networkparameters and their interconnections. Classify and define symmetrical and asymmetrical network characteristics. Design and calculate parameters of passive filters. classify signals, systems and analyze them using Transform techniques. Evaluate signal characteristics using time and frequency domain analysis. Assess the systems stability and causality describe the Sampling process and analyze the DT Signals/Systems using DTFT and Z. Transform. Apply the Convolution and correlation concepts for analysis of signals and systems Identify the natural resources and realize the importance of water, food, forest, mineral, energy, land resources and effects of over utilization.		1		
4       8EC CO2       18EC CO2_Electronic Devices       various diode and Transistor circuits. 			Understand the concept of ecosystems and
			realize the importance of interlinking of food chains.
			Contribute for the conservation of bio-diversity.
			Suggest suitable remedial measure for the
			problems of environmental pollution and
			contribute for the framing of legislation for
			protection of environment.
			Follow the environmental ethics and contribute
			to the mitigation and management of
			environmental disasters.
			Upon completion of this course, the student will be able to Implement the abstract data type.
			Upon completion of this course, the student will
			be able to Implement linear data structures such
			as stacks, queues using array and linked list.
			Upon completion of this course, the student will
		Basics of Data Structures	be able to Understand and implement non-linear
8	18CS C06	Lab	data structures such as trees, graphs and its
		Lau	traversal techniques.
			Upon completion of this course, the student will
			be able to Implement various kinds of searching,
			sorting techniques.
			Upon completion of this course, the student will
			be able to Develop the suitable data structure for
			real world problem.
			Demonstrate the characteristic behaviour of PN
			junction diode, Zener diode and special purpose
			semiconductor diodes
			Design various non-linear wave shaping circuits
			using diodes for a given specification
9	18EC C05	Electronic Devices Lab	Analyze the behaviour of non-linear wave
9	18EC C03	Electronic Devices Lab	shaping circuits using diodes.
			Examine the characteristics of BJT and FET in
			various configurations
			Evaluate and compare the significant parameters
			obtained from the characteristics of BJT and
	-		FET.
			Identify and measure the passive and active
			components using electronic equipment.
			Apply Network theorems to AC and DC
		Electronic Workshop and	Circuits.
10	18EC C06	Networks Lab	Determine and analyze two port network
		TYOUYOTKS Lau	parameters.
			Design and verification of attenuators and filters.
			Simulation of different networks and circuits
			using the simulation software.
			Demonstrate effective time and stress
			management techniques while being assertive
	1055 555	G G GL:11-	and setting short
11	18EG C03	C03   Soft Skills	term and long-term goals.
			Identify problems and construct an argument in
			given case studies and write abstracts.
			alle minima e materia e ma

			A 1 1 (1 + 1 *11 ) (1
l			Analyze and assess their skills, strengths,
			weaknesses and face interviews confidently and be able to draft
			resumes.
			Adapt to corporate culture by personal and
]			professional sensitivity and also be able to draft
			an effective
			SOP.
]			Design a mini-live project by collecting and
			analyzing data and making oral and written
			presentations.
			Recall and relate the knowledge of BJT and FET
			behaviour in the design of various biasing and
			amplifier circuits.
			Apply low and high frequency models of
			BJT/FET in the analysis of single stage and
			multistage amplifiers.
			Design and analyse amplifier and oscillator
12	18EC C07	Analog Circuits	circuits.
			Compare and Contrast different types of biasing,
			Multistage, Feedback, Power amplifiers and Multi-vibrators
			circuits.
}			
			Interpret a given analog circuit and evaluate its performance parameters by applying acquired
			knowledge.
			Understand the need for modulation and various
			linear modulation schemes.
	18EC C08		Infer the concepts of various nonlinear
			modulation schemes.
			Design various transmitters and receivers.
13		Analog Communication	Assess a random signal by computing various
			statistical properties.
			Evaluate the performance of analog
			communication system through the estimation of
			noise.
			Understand the basic parameters of an antenna
			Analyze the antenna using current distribution
			concept in order to estimate the field patterns
	10=0 =00	Antennas and Wave Propagation	Appraise and compare the concepts of broadside
14	18EC C09		and end fire array
			Understand the working principle and
			characteristics of various antennas
			Classify and study of radio wave propagation
			Find the transfer function of a system
			represented by a block diagram and signal flow
			graph.
			Evaluate the time domain specifications and
15	18EC C10	Control Systems	steady state error of a system.
13	18EC C10	C10   Control Systems	Investigate stability of the system using different
			tests.
			Compare various controllers and compensators.
			Apply State Space Concept to analyse and
L	1	1	HLAU

		. •	design a control system.
		ı	Understand the basic concepts related to digital
j			system design.
	·		Design the combinational and sequential circuits.
			Analyze the behavior of the digital system
16	18EC C11	Digital Systems Design	design.
			Develop the digital system using various Verilog
			HDL modeling.
			Apply the design concepts of digital system
			using Verilog HDL.
			Understand the making of the Indian
			Constitution and its features.
			Identify the difference among Right To equality,
		,	Right To freedom and Right to Liberty.
			Analyze the structuring of the Indian Union and
	18EG		differentiate the powers between Union and
17	M01	Indian Constitution	States.

	T		Analyze various aspects of Demand Analysis,
			Supply and Demand Forecasting.
			Understand Production and Cost relationships to make best use of resources available.
			Apply Accountancy Concepts and Conventions and preparation of Final Accounts.
			Evaluate Capital and Capital Budgeting decision based on any technique.
			Illustrate linear convolution and correlation using MATLAB.
			Design the digital filters using MATLAB.
51	18EC C23	Digital Signal Processing Lab	Examine the performance of multirate techniques using MATLAB.
	1 1		Experiment with decimator and interpolator on DSP processor.
			Implement the digital filters on DSP processor.
			Develop the programs of 8051 and ARM using
			their respective instruction set.
			Understand the architectures of different microcontrollers to enable to design applications
		Microcontrollers Lab	using them.
52	18EC C24		Build code for 8051 and ARM7 to interface
			various input/output modules  Analyze the hardware and software interaction
			and integration.
			Design and develop the 8051 and ARM 7 based
			embedded systems for various applications.
	-		Examine the characterstics of RKO and Gunn
			Oscillator
			Compare the relation between guide wave lengt,
			free space wavelength and cutoff wavelength
<b>5</b> 2	18EC C25	Microwave Engineering	Measure VSWR for various loads at microwave
53	18EC C23	Lab	frequencies
			Estimate the microwave power ratios at various
		1 " 1 1	ports of microwave components
			Evaluate unknown impedance of various microwave loads
			Relate the communication tasks with basic
			concept of networking, protocols and Service
			models at different layers.
			Interpret the principle and function of each layer
	18EC C26	Computer Networks	using protocols and
<i>-</i> 4			Model a network for random accessing to route
54			the packets
			Examine the performance of network with
			routing algorithms and the congestion control
			approaches.
			Explain the importance of protocols in each layer
			and layering concepts.
55	18EC C27	VLSI Design	Model a digital design using Advanced Verilog HDL constructs
22	1000 027		HEAD HEAD

			Analyse the characteristic behaviour of MOSFET and discuss CMOS circuit Design
			Process
			Explain various process steps involved in IC
			fabrication.
			Design various NMOS and CMOS based logic circuits.
			Discuss the concepts of subsystem designs and Testing.
			Comprehend the key concepts of fundamental
			cryptography techniques which are required for Blockchain Technology.
			Describe the key concepts and compare various
		Comments and	models of Blockchain Technology.
56	18EC E15	Cryptography and Blockchain Technology	Understand consensus mechanism in
		Blockcham reciniology	Blockchain.
			Acquire knowledge regarding cryptocurrency
			transactions and their validation.
	i		Apply the concepts of Blockchain technology in
			real world scenario.
			Classify the differences between DSP Processor
			and General-Purpose processor.  Understand the basic architectural needs of
			Programmable DSPs
		DSP Processors and	Explain the architecture features of
57	18EC E16	Architectures	TMS320C55XX processor.
		Architectures	Develop on interface with TMS320C55XX
			processor to external peripherals.
			Design and implement of various signal
			processing algorithms using 55xx processor.
	18EC E17		Understand the basic concepts of computational
			Electromagnetics
			Interpret the variational methods.
		Principles of	Apply the process of moment methods using
58		Computational	appropriate weighing functions
36		Electromagnetics	Devise Quasi Static, Scattering and Radiation
1			problems using Method of Moments.
			Solve the Laplace's equation, Poisson's equation
			and wave equations using finite element
			methods.
	18EC E18		Comprehensive Understanding of Static
		Semiconductor Memory Design and Testing	Random-Access Memory (SRAM) and Dynamic Access Memory (DRAM).
			Design of Non-Volatile Memory Architectures
			and their future comparison.
59			Applying the memory Fault modelling and
			memory for testability.
			Analyze the Memory Fault Modelling, Testing
			of memory design.
			Enhance the advanced memory technologies and
			packaging technologies.
<b> </b>			Understand the basic characteristics of speech

61	18EC E20	CMOS RF IC Design	Apply the concepts of noise and reflection
01	TOLC D20	Civios Id 10 Bosign	coefficient to characterize RF Systems.
			Analyse different Wideband Amplifies, LNA,
			Mixers and Power Amplifiers.
			Design and Development of LNA, Power
			amplifier, PLL.
			Describe basic concepts of image processing
			system
			Summarize and compare various digital image
			transform techniques
62	18EC E21	Digital Image Processing	Demonstrate and survey digital image
			enhancement in practical applications.
			Analyse the case study related to various techniques of image restoration
			Apply compression techniques on digital image.
			Understand the fundamentals of the embedded
1			systems
			Analyze the hardware and software details of the
	ļ		embedded systems
	ĺ		Design interfacing of the systems with other data
63	18EC E22	Embedded Systems	handling / processing systems.
			Evaluate the performance of an embedded
			system using various debugging tools.
			Apply embedded design approach for various
ŀ			applications.
			Understand and compare the Super-heterodyne
	18EC E23	Software Defined Radio	receiver, SDR and CR.
			Analyze the basic architecture of SDR
			Determine the processor based on the
64			application.
			Evaluate and choose the various spectrum
			sensing methods based on application.
			Choose the USRP and WARP boards based on
			the facilities required for a SDR application.
			Recall the requirements and used cases of 5G
	18EC E24	C E24 5G Communications	technology
			Illustrate the architecture of 5
65			Apply the 5G concepts to D2D communications
			Compare various Radio-Access Technologies
			Explain the concept of massive MIMO
	18CE O02	Disaster Mitigation and	Identify and understand the fundamental

		Management	terminologies in disaster management.
			Distinguish between the Hydro-meteorological
			disasters and apply the concepts of structural and
	-	_	non- structural mitigation measures.
			Categorize different Geographical Disasters and
			apply the knowledge in utilizing the early
			warning systems.
			Analyze various mechanisms and consequences
			of human induced disasters.
			Develop an awareness of disaster management
			phases and formulating effective disaster
			management plans, ability to understand various
			participatory roles of stakeholders- Central and
17.70			State Government bodies at different levels.
		'	Understand the concept and essence of entrepreneurship.
			Identify business opportunities and nature of
		_	enterprise.
	18ME	_	Analyze the feasibility of new business plan.
67	O04	Entrepreneurship	Apply project management techniques like
	004		PERT and CPM for effective planning and
			execution of projects.
	_		Use behavioural, leadership and time
	_	1	management aspects in entrepreneurial journey
			Classify the difference between FMS and
		-	DBMS; describe the roles of different users and
	_		the structure of the
		1	DBMS. Design the database logically using ER
		-	modeling
		-	Outline the schema of the relational database and
		_	key constraints. Develop queries using DDL,
		06 Fundamentals of DBMS	DML and DCL of
			SQL.
			Identify the inference rules for functional
			dependencies and apply the principles of normal
68	18CS O06		forms to decompose the
			relations in a database.
			Summarize the concepts of dense, sparse, ISAM
			and B+ tree indexing and get familiar with states
			and properties of
			transactions.
			Interpret the locking, time stamp, graph and
			validation-based protocols for concurrency control.
			Summarize log-based recovery techniques to increase the robustness of the database, identify
			to resolve the deadlocks in the transactions
		25232 191	Understand the fundamental concepts and
-203	18IT O02	Python Programming	control structures of python programming.
69			Write user defined iterative & recursive
		- 18	functions, identify appropriate predefined
			functions and perform file handling Operations.
			T Total Total

			Use suitable data structures such as sequences,
			Apply concepts of OOP, exception handling and build regular expressions using Python.
			Design and develop GUI based applications and visualize the data.
			Understand the channels of communication and define nature and aspects of Technical
			Communication  Compare and contrast technical communication to that of general communication while constructing error free sentences applying features of technical writing.
70	18EG O01	Technical Writing Skills	Analyze data, draw inferences to write Journal articles and conference papers and to compose business letters.
			Evaluate data to draft technical reports and technical proposals.
			Design a technical presentation by understanding the nuances of presentation skills and also transfer data from verbal to graphic and
			vice versa Apply fundamental principles of computer
		Computer Networks Lab	networking.  Examine the performance of design issues of Link layer.
71	18EC C28		Construct a network and measure its performance with different routing algorithms.  Create a wired and wireless Network using NS-2.
			Analyze performance of various Network protocols using NS-2
			Demonstrate the process steps
ļ		Electronic Design and Automation Lab	Develop HDL codes/scripts with appropriate syntax
72	18EC C29		Apply an appropriate modelling style to describe various combinational and sequential circuits in Verilog HDL
			Examine the successful execution of the codes/ schematic using various Simulation Tools
			Build various digital circuits on hardware boards like FPGA.
	18EC C30	Electronics Measurement and Simulation Lab	Understanding of the operational features of various analog and digital test and measurement equipment.  Analysis of various standard bridges and ability
			to measure temperature
73			Learn how to develop basic applications in the LabVIEW graphical programming environment.
			Develop ability for programming in LabVIEW using various data structures, program structures,
			plotting the graphs and charts for system monitoring, processing and controlling.
			DEPARTMENT OF FCF

DEPARTMENT OF ECE
Challariya Bharathi Institute of Technol
Hyderapart-CO0 075

			Apply knowledge of mathematics and engineering to formulate and study or solve engineering problems, including problems at the interface of engineering.
74	18EC C31	Project: Part – 1	List the various approaches to the selected problem.  Interpret the advantages and disadvantages of various approaches.  Apply the selected approach for simulating / modelling / designing the problem.  Analyse and write a report on the results of the simulation / modelling of the problem selected.  Justify and present the results of the simulation / model / design before the departmental committee.
75	18EC C32	INDUSTRIAL VISIT	Know the importance of visiting an engineering industry from the point of view of process of manufactory procedures and setup.  Summarize the required information with regard to materials, source of supply in respect to the product.  Know the stages in manufactory of a product.  Prepare the 'industry visit' technical report covering the details of visit and its importance.  Visualize the safety precautions to be followed in industry, confidentiality of the product processing as the man power required.
76	18EC E25	IoT and its Applications	Understand the terminology, enabling technologies and applications of IoT  Apply the concept of M2M and understand the basics of modern networking with the concepts of SDN and NFV.  Understand the basics of Python Scripting Language which is used in many IoT devices.  Describe the steps involved in IoT system design methodology.  Design simple IoT systems using Raspberry Pi board with sensors, actuators and develop web applications using python-based framework called Django.
77	18CS O07	Basics of Cyber Security	List the different types of cybercrimes and analyze legal frameworks to handle cybercrimes.  Identify the Tools and Methods used in cybercrimes.  Analyze and resolve cyber security issues and laws governing Cyberspace.  Describe the need of Digital Forensics and the importance of digital evidence in prosecution.  Interpret the commercial activities in the event of significant information security incidents in the Organization.  Discuss the vulnerabilities in networking protocols and their militarion techniques.

DEPARTMENT OF ECE Challering Bharathi Institute or Technique

78	18EC E26	Principles of GNSS	Demonstrate the fundamental concepts of communications in understanding of GPS architecture, operation and signal structure.  Apply the principles of orbital mechanics, time references, coordinate systems and range measurements in estimating user position.  Examine the effect of various error sources and satellite geometry on position estimates and analyze the suitability of a given data format.  Compare the architecture and working of other GNSS systems and make use of GNSS systems in a variety of civilian and defense applications.  Relate the knowledge of DGPS techniques in understanding augmentation systems.
79	18EG O02	Gender Sensitization	Understand the difference between "Sex" and "Gender" and be able to explain socially constructed theories of identity.  Recognize shifting definitions of "Man" and "Women" in relation to evolving notions of "Masculinity" and "Femininity".  Appreciate women's contributions to society historically, culturally and politically.  Analyze the contemporary system of privilege and oppressions, with special attention to the ways gender intersects with race, class, sexuality, ethnicity, ability, religion, and nationality.  Demonstrate an understanding of personal life, the workplace, the community and active civic engagement through classroom learning.
80	18EC E27	Principles of Wireless Sensor Networks	Recall the features, characteristics, Technology, Data transmission, protocols and design issues of wireless Sensor networks.  Illustrate the function of Network architecture, Routing, Protocol structure, and node problems  Apply the appropriate protocols and routing algorithms to solve issues in Network.  Analyze data processing, aggregation and routing, Protocol overheads, Throughput, Security challenges in a WSN.  Compare the performance of WSN in terms of topologies, technology, protocols, design principles, and security
81	18PY O01	History of Science and Technology	Demonstrate the process of beginning of science and civilization, knowledge acquisition and philosophical approach of science and its advancements in the Stone Ages and Antiquity period.  Illustrate the advancements in science and technology in the medieval period across Asia and Arab countries and decline and revival of science in Europe.  Explain the scientific approach and its advances of the Europeans and how the role of engineer

Chalte: ya Bharathi Institute of Technol
Hvderapact-500.075

			during the industrial revolution and the major advancements.
			Make use of the advancements in the field of science and technology by adopting new philosophies of 19th and first half of 20th century in finding ethical solutions to the societal problems.
			Interpret the changes in specializations of science and the technology and build the relation between information and society from second half of 20th century onwards.
			Understand Real-time operating system requirements and applications.  Categorize different scheduling approaches for
82	18EC E28	Real Time Operating Systems	real time scheduler.  Differentiate various RTOS features and POSIX standards
			Analyze the inter task communication in RTOS.  Apply the Linux based embedded system design process.
			Define the basic concepts related to Python and Machine Learning  Describe the feature engineering methods,
_			regression techniques and classification methods  Apply Python packages for data visualization.
83	18CS O10	Machine Learning using Python	text and time series data analysis using NLP toolkit
			Evaluate and interpret the results of the various machine learning techniques
			Solve real world problems using deep learning framework  Describe the basic components, specifications and
		- 12 - 02	applications of the Robots.  Understand transformations, direct and inverse kinematics of robots.
84	18ME 001	Robotics	Calculate forces in links and joints of a robot and find the singularities, Jacobian and trajectory planning of a robot for various tasks.
		- 1 pm	Classify drives, sensors and grippers for various applications.  Program a robot to predict motions for a given
		la la	task with machine vision and sensors.

## R16:

## CHAITANYA BHARATHI INSTITUTE OF TECHNOLOGY (Autonomous) Gandipet, Hyderabad -75

## Department Of Electronics and Communication Engineering Course Outcomes Statements for BE (ECE)-R16

Sl	Course		Course Outcomes Statements
No	Code	Name	
			Expand functions in the given intervals.
			Solve linear and non linear PDEs.
			Solve one-dimension, two-dimension, Heat steady state equations and also one-dimension wave equation.
1	16MTC05	Engineering Mathematics-III	Solve problems on Analytic functions, Cauchy's theorem and Cauchy's integral formula.
			Expand functions by using Taylor's and Laurent's series.
			Solve Real and Complex integrals by using Cauchy Theorems.
			Apply basic concepts of electric circuits and also simplify using network theorems. They will also be able to find Solution to networks using topological description.
			Analyze RL, RC, RLC circuits using Transient and Steady State Responses for dc and ac input signals.
2	16EC C02	Network Theory	Represent vector, phasor diagrams and also find power calculations for ac circuits. They will be able to classify dot convention rules, self and mutual inductance for simple magnetic coupled circuits.
			Discuss complex frequency analysis to series and parallel resonant circuits. Students will be able to compare Z,Y,H, two port network parameters and their interconnections.
			Classify and define symmetrical and asymmetrical network characteristics.
			Design and calculate parameters of passive filters.
			The concepts of semiconductor devices like PN junction diode, Transistor, and special diodes.
		6EC C03 Electronic Devices and Circuits	The applications of diodes.
3	16EC C03		The various configurations, characteristics and biasing techniques of transistors – BJT, JFET & MOSFET.
,	TOEC COS		The applications of transistor as a switch and an amplifier.
			The analysis of BJT & FET in various configurations using small signal equivalent models.
			The frequency response of various amplifiers.
			classify signals, systems and analyse the signals using Fourier series.
4			Understand signal spectrums and characterize the systems.
	16EC C04	Signals and Systems	Represent the signals by generalized exponentials using Laplace
			Demonstrate conversion of continuous time signal to discrete time signal
			Compare the signals using correlation
			DEPARTMENT OF ECE

DEPARTMENT OF ECE

Chaita: ya Bharathi Institute of Technoic.

			Relate input and output response of the system using Convolution
			Comprehend mathematically the coordinate systems and solve simple static electromagnetic problems using various laws andd theorems.
			Understand Maxwell's equatons in different forms
			(differential and integral) and apply them to diverse
			engineering problems.
5	16EC C05	Electromagnetic Theory and	Demonstrate the electromagnetic wave properties with respect
	1050 003	Transmission Lines	to different transmission mediums
			Compare the plane wave transmission and reflection at different boundaries
			Predict the behaviour of reflection and refraction of the waves in different mediums
			Estimate the transmission line properties, reflection and matching concepts
			Measure R,L,C components using electronic equipment.
			Use CRO and power devices.
6	16EC C06	Electronic Workshop	Conduct experiments on DC and AC circuits and also verify the network theorems.
		and Network Lab	Design passive filters.
			Measure two port parameters.
			Simulate a circuit using the simulation software
			Recall the elementary concepts of diode, BJT, FET
			Classify and relate the performance of different types of rectifiers. Compare and contrast the biasing techniques, different configurations, characteristics of BJT & FET.
	16EC C07		Model different amplifier circuits
7		Electronic Devices Lab	Examine different non-linear wave shaping circuits and draw
			an inference for their outputs. Distinguish different types of
	÷		rectifying circuits and amplifier circuits and their performance parameters.
			Choose the best configuration for the specifications provided.
}			Design, develop and improve the performance of the amplifier
			circuits
			Be effective communicators and participate in group
			discussions and case studies with confidence. Also be able to
			make presentations in a professional context.
			Write Resumes, prepare and face interviews confidently.
8	16EG C03	Soft Skills and Employability	Be assertive and set short term and long term goals. Also learn to manage time effectively and deal with stress.
		Enhancement Lab	Make the transition smoothly from Campus to Corporate.
			Also use media with etiquette and know what academic ethics
			are.
			To do a live, mini project by collecting and analysing data and making oral and written presentation of the same.
			The Various switching algebra theorems and minimization of switching functions.
9	16EC C08	Digital Logic Design	The Structure of different digital logic elements like gates,
			multiplexers, encoders, decoders, adders and subtractors to
"	1020 000		build simple applications.
			Different types of flip-flops and sequential circuits.
			The Design of FSM.
			HEAD

			The Design and simulation of various combinational and sequential logic circuits using Verilog HDL.
			The Simulation and synthesis of digital logic design using Verilog HDL.
			Define the high frequency model of BJT and FET
			Compare and contrast different types of multistage, feedback, power and tuned amplifiers
			Apply the concepts of BJT in multivibrators, feedback, multistage amplifiers and tuned amplifiers
10	16EC C09	Analog Electronic Circuits	Categorize different types of feedback amplifiers, power amplifiers and voltage regulators.
			Choose the best configuration for the specifications (like conversion efficiency in case power amplifiers, input and output impedance, resonating frequency and bandwidth)
_ =		-	Build narrow band amplifiers and improve the performance of the transistors voltage regulators
			Understand the need for modulation, representation of various AM modulation schemes and further they will able to generate and demodulate various types of AM signals
			Represent, analyze and distinguish FM and PM signals and also they will be able to generate and demodulate FM signals.
		Andre	Understand the functioning of transmitters. They will be able to evaluate the radio receiver characteristics. To understand the necessity of Pre-emphasis and De-emphasis in FM broadcasting.
11	16EC C10	Analog Communication	Understand and analyze the concept of Random Variable and Random Process. Further they will be able to evaluate the Response of Linear Systems for random signals.
			Know the various sources of noise. They will be able to represent and analyze noise. Further they can evaluate and compare its effect on analog modulation schemes.
			Demonstrate the Sampling theorem and analyze various sampling processes. Further they will be able to understand the various pulse modulation schemes.
			Understand the basic parameters of antenna
			Extend current distribution concept in order to estimate the field patterns.
		_	Apprise the concepts of broad side and end fire arrays
12	16EC C11	Antenna and Wave Propagation	Identify the significance of antenna array with respect to working principle and radiation pattern
			Understand the working principle and characteristics of various antennas
			Study the behaviour of radio waves in various modes of wave propagation.  Understand the various standards available for the
			measurement process.
			Evaluate and perform accurate measurements for any engineering system with clear idea of the potential errors.
	\$2,000,000	Electronic	
13	16EC C12	Instrumentation	Understand the working principles of various transducers.
			Select an appropriate transducer for given application.  Use instruments like spectrum analyzer, DSO and other
			virtual instrumentation techniques for appropriate measurements.
			WEFARINGENT OF EUE

Chaltariya Bharathi Institute of Techno-Hyderabach 500 075

			Understand the fundamentals of various Biomedical instrumentation systems.
			apply fundamental knowledge of Managerial economics
			understand various aspects of demand analysis and forecasting.
			understand price determination for different markets.
14	16MB C01	Engg. Economics and Accountancy	study production theory and analyze various costs & benefitsinvolved in it so as to make best use of resources available.
			analyze different opportunities and come out with best feasiblecapital investment decisions.
			apply accountancy concepts and conventions, Final accounts and financial analysis.
			Design a Digital circuit using Verilog HDL.
		Digital Logic Design	Understand various abstraction levels of a digital design.
15	16EC C13	Lab using Verilog	Verify the functionality of a design using Test bench.
			Simulate and synthesize combinational logic circuits
			Simulate and synthesize sequential logic circuits.
			Define the bandwidth of multistage amplifiers using BJT and FET
			Compare and contrast different types of multistage configurations, feedback, power, tuned amplifiers
	16EC C14	Analog Electronic Circuits Lab	Apply the concepts of analysis of BJT and compare the results in the lab for multi-vibrators, feedback, multistage amplifiers and tuned amplifiers
16			Categorize different types of feedback amplifiers, power amplifiers and voltage regulators
			Choose the best configuration for the specifications (like conversion efficiency in case power amplifiers, input and output impedance, resonating frequency and band-width)
			Build narrow band amplifiers and improve the performance of the transistors voltage regulators
			Demonstrate the generation and detection of various analog modulated signals.
-			Understand the sampling concept and further they can generate and detect various pulse modulated signals.
		Analog	Obtain and analyze frequency response of Pre-Emphasis and De-Emphasis circuits.
17	16EC C15	Communication Lab	Evaluate Mixer, Radio receiver and PLL characteristics.
			Understand the concept of multiplexing and also can compare FDM and TDM techniques.
			Estimate the Power spectral density of noise and Signal to Noise ratio and further able to analyze spectrums of AM and FM signals.
			Understand the concept of pulse digital modulation schemes and compare their performance.
18			Interpret the concept of information theory and apply source coding schemes
	16EC C18	C18 Digital Communications	Demonstrate various error control schemes.
			Develop the encoding and decoding techniques to detect and correct the errors.
			Evaluate the performance of digital modulation schemes with probability of error.

Chalta: ya Bharathi Institute of ECE

Hyderapart-100.075

	9		Identify and apply spread spectrum modulation techniques
			Understand the basic construction, characteristics and
			parameters of OpAmp.
			Analyze the linear and nonlinear applications of Op-Amp.
		Integrated Circuits and	Understand the concepts of IC555 timer, IC723 regulator and
19	16EC C19	Applications	PLL
			Classify and describe the characteristics of different logic families
			Design the Combinational and Sequential circuits with ICs.
			Understand the concepts of memories, design of PLD's
			Understand the architecture of 8086 microprocessor and 8051
			microcontroller.
			Write an assembly language program for different
			applications by using instruction set of 8086 microprocessor.
			Understand different programmable peripheral devices for a
	. (70 000	Microprocessors and	given application.
20	16EC C20	Microcontrollers	Distinguish between Microprocessor and Microcontroller
		*	based systems.
			Identify and explain the operations of peripherals, typically
			used with interfacing microprocessors / microcontrollers.
-			Develop the microcontroller based programs for various
			applications.
			Find the transfer function of a system represented by a block
			diagram and signal flow graph.
- 1			Evaluate the time domain specifications and steady state error
			of a system.  Analyze the stability of a system.
21	21 16EC C21	Control Systems	Analyze the system in frequency domain.
			Compare various controllers and compensators.
			-
			Apply State Space Concept to analyze and design a control system. models, block diagrams and signal flow graphs.
			Discuss the basic structure and organization of computer
			system.
			Apply fixed and floating point arithmetic algorithms.
			Explain Instruction cycle, register transfer and micro
22	16EC E01	Computer Organization	operations.
	TODO DOT	and Architecture	Discuss about RISC/CISC architectures, pipeline and vector
			processing.
			Explain Input/output organization.
			Discuss about Memory organization and Management.
			Experiment with various pulse digital modulation techniques.
		-	Examine different line coding techniques.
		Digital	To detect and correct errors in cyclic codes.
23	16EC C22	Digital Communications Lab	Assess the errors in convolutional encoder and decoder
		Communications 200	Demonstrate digital carrier modulation techniques
			experimentally.
			Know the importance of MODEM characteristics.
			Analyze the configurations, parameters of Op-Amp (IC741).
		<b>*</b> 4	Demonstrate the circuits of Op-Amp for various applications.
24		Integrated Circuits and	Analyze and design the circuits using IC555 timer, IC723 and
	16EC C23	Applications Lab	data converters.
		Applications Euro	Analyze the characteristics of TTL and CMOS gates
			Analyze and design-various combinational circuits using
			digital ICs.

W   IDEL EUX   - 1				and OFDM
W   IDEL EUX   - 1	30	16EC E03		Recall the elementary concepts of MOS device, MOS
	30	1000 003	Design	ampiliters and Op- Amp

			Classify and relate the performance of different types of MOS Amplifiers, Current Mirrors, Op-Amps and data converters
			To Model MOS device under different cases
			Examine different MOS amplifier configurations, Op-Amp, Data converters, will be able to distinguish different types of Op- Amp configurations and their performance parameters.
			Choose the best configuration for the specifications Slew rate, conversion speed.
			Design, develop and improve the performance of the data converters and Op-Amp.
			understand the theory and principles of information theory and channel coding
		-	Design and analysis of encoding and decoding circuits for block codes
31	16EC E04	Coding Theory and Techniques	Apply the principles of abstract algebra, finite fields and its extension to design related codes
		Techniques	Develop and execute encoding and decoding algorithms associated with Rs codes
			Demonstrate the ability to select and design simple convolutional codes
			Analyze modern capacity approaching codes like Turbo codes
			Understand basic data structures arrays and linked lists
			Analyse time complexity of algorithms
			Understand the basic operartions of Stacks and Queues
32	16IT E27	Data Structures	Implement basic operations on data structures
			Understand applications of binary trees and graphs
			Understand various kinds of searching and sorting techniques
			Achieve proficiency in object-oriented concepts and also learns to incorporate the same into the Java programming language.
			Create Java application programs using sound OOP practices e.g. Inheritance, interfaces and proper program structuring by using packages, access control specifiers.
33	16IT E25	Java Programming	Understand and Implement the concepts of Exception Handling and Multithreading in java.
55			Develop the ability to solve real-world problems through software development in high-level programming language using Large APIs of Java as well as the Java standard class library.
			Understand File, Streams, Input and Output Handling in java.
			Create graphical user interfaces in java as well as apply the knowledge of Event Handling.
			Understand basic data structures of python.
			Perform operations on strings.
34			Understand the concepts of file I/O.
	16IT E26	Python Programming	Understand exception handling in Python.
			Plot data using appropriate Python visualization libraries.
			Develop basic Python applications.
35		•	Understand the concept of programmable logic devices and differences
	16EC E05	CPLD and FPGA	between these devices.
	16EC E05	16EC E05 Architectures	Analyze various CPLD architectures and their programming technologies
			- VERANTIMENT OF ECE

Chaltariya Bharathi Institute or Hvderapart-100 075

			Analyze various FPGA architectures and their programming technologies
			Implement various logic functions on PLDs, CPLDs and FPGAs
			Understand the concepts of placement and routing and classifying ASICs.
			Demonstrate VLSI tool flow for CPLDs and FPGAs.
			Develop the ARM7 C programs using arithmetic, logical and
			branch operations
			Understand the usage of various debugging tools available to program ARM7
		n	Program ARM7 to interface various input/output modules
36	16EC C29	Embedded System Design Lab	Know about the data transfer using serial communication protocols.
			Analyze the hardware and software interaction and
			integration.
			Design and develop the ARM 7 based embedded systems for various applications
			Design and analyze the digital filters using MATLAB.
			Implement FFT algorithms for linear filtering and correlation using MATLAB
		=	Experiment with multirate techniques using MATLAB
37	16EC C30	Digital Processing Lab	Perform spectral analysis of noisy signal using welch's
5,	1020 000	Digital 1100000mg	method
			Design and Implement the digital filters on DSP processor
			Obtain response of a LTI system to a ramp/step input on DSP
			processor
			Know the characterstics of RKO and GUNN Oscillator
			Understand the relation between the guide wavelength, free space wavelength and cutoff wave length
			Measure VSWR for various loads at microwave frequencies
38	16EC C31	Microwave Lab	Estimate the power ratios at various ports of microwave
			components
1			Calculate the unknown impedance of various microwave
			loads
			Understand measurement of radiation patterns.
			Relate different tasks of computer communications networks and protocol architectures.
			Classify the switching concepts and illustrate the services of
			each layer.
20	1650 022	Data Communication and Computer Networks	Analyze the services and functions of the different layers and categorize different internetworking devices and their
39	16EC C32		functions.
			Compare the principle operation of major internet routing
			protocols.
			Identify the importance of basic network security and Internet
			applications.
			Understand the principle of operation of GPS and GPS
			ephemerides
			Analyze GPS signal structure and significance of various coordinate systems
40			Estimate the various errors and their effect on position
	16EC C33	Principles of GNSS	estimate the various errors and their effect on position estimation.
			Compare other global and regional navigational systems
			Apply DGPS principle and also analyze various augmentation
			systems. Use of GPS in Surveying, Mapping and Navigation.

Chaltariya Bharathi Institute of technology

Hvderapact-fino 075

41	16EC C34	Radar and Satellite Communication	Identify various building blocks of pulse radar, analyze its operation and predict the range performance  Measure the speed and direction of moving targets in spite of blind speeds  compare various tracking radar mechanisms  Understand basic satellite construction, sub systems, launching mechanisms and its operation  Analyse LOS Propagation and calculate the pathloss in a satellite link. Calculation of G/T and C/N Ratios of a path link and understand
42	16EC C35	VLSI Design	Simulate and synthesize digital logic designs.  Understand characteristic behavior of MOSFET and layout design rules.  Analyze the process steps in IC fabrication  Design CMOS based logic circuits.  Understand the design concepts of memories and VLSI testing.
43	16EC E09	Real Time Operating Systems	Understand Real-time operating system requirements and applications  Categorize different scheduling approaches for real time scheduler  Compare different real time systems  Analysethe inter task communication in RTOS  Apply the Linux based embedded system design process.
44	16EC E10	Speech Processing	Understand the basic characteristics of speech signal in relation to production and hearing of speech by humans.  Analyze speech and extract features for speech applications.  Design the various applications like recognition, synthesis, and coding of speech.  Use HMM for speech recognition.  Implement dynamic warping technique in real time problems.
45	16EC E12	Application of IoT in ECE	Understand the terminology, enabling technologies and applications of IoT  Apply the concept of M2M and understand the basics of modern networking with the concepts of SDN and NFV.  Understand the basics of Python Scripting Language which is used in many IoT devices.  Describe the steps involved in IoT system design methodology.  Design simple IoT systems using Raspberry Pi board with sensors, actuators and develop web applications using python-based framework called Django.
46	16EC E13	Digital Image Processing	Understand how images are formed, sampled and quantized.  Applyvarious transforms like Fourier, DCT, Haar, DWT and Hadamard  Transform to different applications.  Apply image enhancement techniques for practical applications  Implement the image restoration techniques  Implement image compression techniques by removing theredundancy.
47	16EC C36	Advanced Simulation Lab	Understand basic applications in the LabVIEW graphical programming environment HEAL)  DEPARTMENT OF FOR

Chaltariya Bharathi Institute of Technology

Hvderapart-700 075

			Develop ability for programming in LabVIEW using various data structures, program structures, plotting the graphs and charts for system monitoring, processing and controlling
			Apply knowledge of mathematics and engineering to formulate and study or solve engineering problems, including problems at the interface of engineering
			Analyze LabVIEW skills to engineer basic computer-based instrumentation
			Create applications that are scalable, readable, maintainable and reliable
			Analyze simulation and synthesis reports of combinational and
			sequential logic circuits
48	16EC C37	Electronic Design and Automation Lab	Obtain gate level net-list and RTL diagrams
		Automation Lab	Implement sequence detector using FSM on FPGA
			Design adders using UDP and Tasks & Functions.
			Implement mini projects on FPGA/CPLD
			List the various approaches to the selected problem.
			Interpret the advantages and disadvantages of various approaches.
49	16EC C38	Project Seminar	Apply the selected approach for simulating / modelling / designing the problem.
.,	TOLC CS	Troject Semma	Analyse and write a report on the results of the simulation / modelling of the problem selected.
	1		Justify and present the results of the simulation / model / design before the departmental committee.
	16EC E16		Differentiate between DSP Processor and General Purpose
			Select the most appropriate processor for the given
		DSP Processors and	application.
50		Architectures	Design and implement various signal processing algorithms using 55xx processor.
			Interface the TMS320C55XX processor to external devices.
			Take up research projects using DSP processors
			Recall the concepts of various processes used in the IC fabrication
			Analyze the base materials, clean room Technology and functions of layers used in the IC fabrication.
51	16EC E18	VLSI Technology	Explain the importance of processes and material used for the IC fabrication with suitable reasoning
			Evaluate the fabrication process aspects to determine various
			technology related concepts.
	_		Outline the packaging and testing concepts applied for VLSI circuits.
			Identify architectures used in the enterprise environment and interpret the key VoIP industry protocols
52			Apply and rephrase the different protocol like SIP, H.323 and VoIP.
	16EC E19	Voice over IP	Examine the importance of QoS with regard to availability and reliability of a voice network.
			Relate the technologies, architectures, and protocols used in the VoIP environment.
			Familiarize with Voice over IP Benefits, Applications and Services.
			Services.  DEPARTMENT OF EGG.

			Understand the basics concepts of Machine Learning and Python
			Understand the basics concepts of Machine Learning and Python
		Machine Learning	Analyze the various types of data by using python based machine learning techniques.
53	16CS O10	Using Python	Identify and evaluate various recommender systems.
			Design solutions to real world problems using deep learning algorithms.
		-	Design solutions to real world problems using deep learning
			algorithms.
			Identify opportunities and deciding nature of industry
			Brainstorm ideas for new and innovative products or services
54	16ME O01	Entrepreneurship	Analyze the feasibility of a new business plan and preparation of Business plan
			Use project management techniques like PERT and CPM
			Analyze behavioural aspects and use time management matrix
			Develop a better understanding of important issues related to what gender is in contemporary India.
			Be sensitized to basic dimensions of the biological, sociological, psychological and legal aspects of gender. This will be achieved through discussion of materials derived from research, facts, everyday life, literature, and film
55	16EG O02	Gender Sensitization	Attain a finer grasp of how gender discrimination works in our society and how to counter it. Students will acquire insight into the gendered division of labour and its relation to politics and economics.
			Understand what constitutes sexual harassment and domestic violence and be made aware of New forums of Justice
			Draw solutions as to how men and women, students and professionals can be better equipped to work and live together as equals.
			Demonstrate knowledge of broad concepts in the history of science, technology ranging over time, space and cultures.
			Recognize the values of a wide range of methodologies, conceptual approaches and the impact of competing narratives within the history of science, technology.
5.0	16PY O01	History of Science and	Identify, locate and analyze relevant primary and secondary sources in order to construct evidence-based arguments.
56	TOP I OUI	Technology	Think independently and critically, using appropriate methodologies and technologies to engage with problems in the history of science, technology.
			Demonstrate academic rigor and sensitivity to cultural and other diversity, and understanding of the ethical implications of historical and scientific enquiry within a global context
			Classify the difference between FMS and DBMS; describe the roles of different users and the structure of the DBMS. Design the database logically using ER modeling
57	16CE O02	Disaster Mitigation and Management	Outline the schema of the relational database and key constraints. Develop queries using DDL, DML and DCL of SQL.
			Identify the inference rules for functional dependencies and apply the principles of normal forms to decompose the relations in a database.
			"halterna Sharathi Institute of Tor.

Chaltanya Bharathi Institute of Technology Hyderapart-120 07

			Summarize the concepts of dense sparse ISAM and B+ tree indexing and get familiar with states and properties of transactions.
			Interpret the locking time stamp graph and validation-based protocols for concurrency control.
			Summarize log-based recovery techniques to increase the robustness of the database identify to resolve the deadlocks in the transactions.
58	16CS O06	Fundamentals of DBMS	Classify the difference between FMS and DBMS; describe the roles of different users and the structure of the DBMS. Design the database logically using ER modeling
			Outline the schema of the relational database and key constraints. Develop queries using DDL, DML and DCL of SQL.
			Identify the inference rules for functional dependencies and apply the principles of normal forms to decompose the relations in a database.
			Summarize the concepts of dense sparse ISAM and B+ tree indexing and get familiar with states and properties of transactions.
			Interpret the locking time stamp graph and validation-based protocols for concurrency control.
			Summarize log-based recovery techniques to increase the robustness of the database identify to resolve the deadlocks in the transactions.
	16EC C39	Seminar	Collect, Organize, Analyze and Consolidate information about emerging technologies from the literature
			Exhibit effective communication skills, stage courage, and confidence.
59			Demonstrate intrapersonal skills.
			Explain new innovations/inventions in the relevant field.
			Prepare and experience in writing the Seminar Report in a prescribed format.
60	16EC C40	Project	Recall the details of the approach for the selected problem.
			Interpret the approach to the problem relating to the assigned topic.
			Determine the action plan to conduct investigation.
			Analyze and present the model / simulation /design as needed.
			Evaluate, present and report the results of the analysis and justify the same.
