CHAITANYA BHARATHI INSTITUTE OF TECHNOLOGY (Autonomous)

Gandipet, Hyderabad -75

Department Of Electrical and Electronics Engineering Course Outcomes Statements for ME(PS & PE)-R20

		Course	Course Outcomes Statements
SNo	Code	Name	
-			Understand the study of optimal power flows
			Acquire knowledge of state estimation required for the real-time operation of power system
1.	20EEC101	Real Time Applications for Power Systems	Describe the importance of contingency analysis at planning stage for secured operation of power system; and simulating the contingency studies with different methods
		for rower systems	Discuss the power system security and challenges in secured operation of power system in real-time environment.
			Explain various methods and models available in power system load forecasting
		10	Give a systematic approach for transient and steady state analysis of all power electronic converters with passive and active loads.
	20555103	Power Electronic	Know and carry out transient and steady state analysis of different power converters of different types of loads and switching sequences
2.	20EEC102	Converters	Analyze power electronic devices
			Analyze and design DC-DC and DC-AC converters
			Analyze and design AC regulator and Cyclo converter
		Research Methodology and IPR	Define research problem, review and asses the quality of literature from various sources
			Improve the style and format of writing a report for technical paper/ Journal report, understand and develop various research designs
3.	20MEC103		Collect the data by various methods: observation, interview, questionnaires
			Analyze problem by statistical techniques: ANOVA, F-test, Chi- square
			Understand apply for patent and copyrights
			Learn the measurement of sequence reactance of synchronous machine and 3-phase transformer
			Knowledge about the relay characteristics
4.	20EEC103	Power Systems Lab	Acquire Knowledge to estimate efficiency, regulation and ABCD constants of 3-phase transmission line
			Learn about various types of faults
			Validate the I–V and P-V characteristics of a PV module
	-		Acquire the knowledge of using simulation tools for power electronic converters modelling.
			Analyze the performance of phase -controlled converters by simulation
5.	20EEC104	Power Electronics Simulation Lab	Demonstrate the effects of different topologies and voltage control techniques in inverters.
		Silituation Lau	Simulate different de-de converter circuits
			Investigate with ac-ac conversion and reactive power compensation calculations

SNo		Course	Course Outcomes Statements
3110	Code	Name	
			Distinguish various stabilities issues in the power system
			Understand the modeling of synchronous machine
6	20EEC105	Power System	Describe the role of Excitation, PSS and Prime Movers in
		Dynamics	improving the power system performance during disturbances
			Analyze the small-signal stability of the power system
			Infer the concepts of LFOs and SSR in detail
			Demonstrate the knowledge of DC isolated and non-isolated regulators
			Demonstrate the knowledge of load and switch resonant converters
7.	20EEC106	Advanced Power	Demonstrate the knowledge resonant inverters
		Electronic Circuits	Model and design DC-DC converters for renewable energy
			conversion
			Apply the knowledge of dc-dc converters used in dc drives and
			renewable energy applications
			Demonstrate the effects of different loads on the performance of
			various phase-controlled converters and choppers
		Power Electronics Lab	Understand the various topologies and control techniques used in
			inverters
9.	20EEC107		Acquire the conversion principles of AC-AC converters
			Analyze different power electronic based speed control technique
			of electric dr
	*		Utilize matrix converter for different power conversions and analyze resonant converters.
			Validate the adaptability of economic load dispatch and load flow
			for a given situation by simulation results.
			Acquire the knowledge about formation of Impedance and
		D	Admittance Matrices
10.	20EEC108	Power Systems Simulation Lab	Acquire the knowledge to analyze the Symmetrical and un- symmetrical fault currents
		Simulation Edu	The state of the s
			Acquire the knowledge to simulate various types of transmission models
			Acquire the knowledge about Symmetrical and Unsymmetrical
			components for a given system.
			Organise the literature review to identify and formulate the engineering problem
		Mini Project with	Design engineering solutions to simple problems utilizing modern tools and methods
11.	20EEC109	Seminar	Demonstrate a sound technical knowledge of their selected mini
		Semma	project topic
			Communicate with engineers and the community to have the
			conscious of surroundings
			Adapt the skills and attitudes of a Professional Engineer
			State research questions related to main problem and identify the
			Research methods
		Industrial Project	Identify literature for review
12,	20EEC110		Integrate theory and practice
	20220110	/Dissertation Phase I	Apply knowledge and understanding in relation to the agreed
		3	area of study.
			Communicate in written form by integrating, analysing and
			applying key texts and practices

SNo	Course		
SINO	Code	Name	Course Outcomes Statements
			Contribute to Research and Development work
			Apply a holistic view to critically, independently and creatively to identify, formulate and deal with complex issues
13.	20EEC111	Industrial Project /Dissertation Phase II	Evaluate critically different engineering/Technological solutions
			Integrate knowledge critically and systematically
			Develop the ethical aspects of Research work.
			Acquire knowledge of sub-transmission, Distribution substations
			Understand Distribution voltage regulation
14.	20EEE101	Electrical Power Distribution System	Discuss the Distribution automation and its application in practice
			Explain the concept of optimization in distribution automation
			Demonstrate the need and functioning of SCADA system
	20EEE102	0EEE102 Mathematical Methods for Power Engineering	Recognize and identify the nature of the mathematical problems that are commonly encountered in power engineering
			Knowledge about vector spaces, linear transformation, Eigen values and eigenvectors of linear operators
15.			To learn about linear programming problems and understanding the Simplex method for solving linear programming problems in various fields of science and technology
			Acquire knowledge about nonlinear programming and various techniques used for solving constrained and unconstrained nonlinear programming problems
			Understanding the concept of random variables, functions of random variable and their probability distribution
			understand the operation of power system in de-regulated and competitive environment
16.	20EEE103		Discuss operation and planning policies, in deregulated environment.
		Power Systems	Describe the transmission pricing methodologies
			Distinguish different ancillary services provided by the ISO
			Explain open access same-time information system.
			Understand, the attributes of an ideal switch and its selection for a Specific Power electronic application
17.	20EEE104	Power Semi Conductor devices & Modelling	Analyze the static and switching characteristics of different current controlled semiconductor devices
		devices & Modelling	Analyze the static and switching characteristics of different voltage controlled semiconductor devices and also to differentiate various voltage controlled devices

CNI	Course		
SNo	Code	Name	Course Outcomes Statements
			Model the Electric Drive System
			Design modulation strategies of power electronics converters, for drives application
18.	20EEE105	Electric Drive Systems	Design appropriate current/voltage regulators for electric drives
			Select and implement the drives for Industrial Process
			Implement various variable speed drives in Electrical Energy Conversion System
			Explain state of the art HVDC technology
		HVDC	Demonstrate the knowledge of HVDC converter operation and methods of control
19.	20EEE106		Demonstrate the knowledge of HVDC converter characteristics and control methods
			Demonstrate the knowledge of the protection methods and ACDC system interactions.
			Demonstrate the knowledge of multi-terminal DC systems.
		0EEE107 Renewable Energy System	Acquire the knowledge on design of solar PV systems
			Implement the concepts of wind power generation
20.	20EEE107		Demonstrate the suitability of non-conventional energy for grid connection
			Understand the working of distributed generation system in autonomous/grid connected modes
			Understand the working of distributed generation system in autonomous/grid connected modes
			Understand the various Artificial Intelligent and Meta-heuristic Techniques
		Artificial Intelligence	Classify the techniques according to their method of approach
21.	20EEE108	Techniques for Power	Select the suitable technique for the given power system problem
<i>ω</i> 1 ·	20000100	Systems Systems	Implement suitable Intelligent technique for the given power system problem
			Execute any power system planning and operation using Artificia Intelligent Techniques

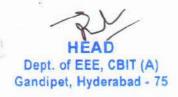

SNo	Course		C
SINO	Code	Name	Course Outcomes Statements
			Recognize the need and architecture of digital relays
			Comprehend the application of mathematics in power system protection
		Digital Protection of	Describe the importance of every element of digital relay
22.	20EEE109	Power System	Distinguish various mathematical algorithms used for the estimation of power system parameters
			Explain various algorithms used for the digital protection of power system.
			Acquire the knowledge of theoretical concepts and standards of Power Quality issues and its measurement
			Acquire knowledge in identifying sources of harmonics
23.	20EEE110	Power Quality	Acquire the knowledge to analyze voltage sag in distribution systems
			Acquire the knowledge Harmonic Filtering Techniques
			Acquire the knowledge in Solutions to power factor correction. Wiring and Grounding Problems
	20EEE111	FACTS and Custom power devices	Distinguish the performance of Transmission line with and without FACTS Devices
			Compare the SVC and STATCOM
24.			Understand the operation and control of various Static Series Compensators
			Understand the operation and control of Unified Power Flow Controller
		Switch mode & Resonant Converters	Identify different power electronic circuits for designing converters
25			Design various types of SMPS for electrical applications.
25.	20EEE112		Design control methods for SMPS
- 1			Analyze the stability using Bode plots for the converters
			Select different components used in SMPS hardware
			Acquire the background required for engineers to meet the role of energy managers
26.	20EEE113	Energy Auditing &	Gain the skills and techniques required to implement energy management
20.	ZUEEE113	Management	Demonstrate energy conservation aspects
			Apply the energy conservation techniques to industrial loads
			Perform basic energy audit in an organization
			Appreciate the difference between smart grid & conventional grid.
27	200000111		Acquire knowledge of smart devices such as PMU, IED etc
27.	20EEE114	EEE114 Smart Grids	Apply smart metering concepts to industrial and commercial installations
			Formulate solutions in the areas of smart substations, distributed generation and wide area measurements.

CNI	Course		
SNo	Code	Name	Course Outcomes Statements
			Acquire knowledge about high voltage generation techniques
			Acquaint with the different methods of generating high voltage
			AC/DC and impulse voltages and currents
28.	20EEE115	High Voltage	Acquire the knowledge of measurement techniques for high
20.	ZOLLEITS	Engineering	voltage AC/DC and impulse voltages and currents
			Acquire knowledge about planning and layout of HV labs
			Attain methods of shielding, grounding and other safety
			precautions of HV labs
			Be familiar to the models of describing hybrid vehicles and their performance
		Electric and	Model the electric vehicles with different acceleration and range
29.	20EEE116	Hybrid Vehicles	Design various configuration and control strategies for electric drives.
			Analyze the different possible ways of energy storage.
			Design of a Hybrid Electric Vehicle, Battery Electric Vehicle
	20CSO 101	20CSO 101 Business Analytics	To understand the basic concepts of business analytics
			Identify the application of business analytics and use tools to
			analyze business data
30.			Become familiar with various metrics, measures used in busine analytics
			Illustrate various descriptive, predictive and prescriptive metho and techniques
			Model the business data using various business analytical methods and techniques
			Causes for industrial accidents and preventive steps to be taken
31.	20MEO101	20MEO101 Industrial Safety	Fundamental concepts of Maintenance Engineering. About wear and corrosion along with preventive steps to be taken. The basic concepts and importance of fault tracing.
			The steps involved in carrying out periodic and preventive
			maintenance of various equipments used in industry
			Formulate a managerial decision problem into a mathematical model
- 1		Introduction to	Apply transportation problems in manufacturing industries
32.	20MEO 102	Optimization	Build and solve assignment models
		Techniques	Apply project management techniques like CPM and PERT to plan and execute project successfully
			Apply sequencing concepts in industry applications

SNo		Course	
SINO	Code	Name	Course Outcomes Statements
			Classify and characterize the composite materials
			Describe types of reinforcements and their properties
33.	207/12/0 103		Understand different fabrication methods of metal matri
33.	20MEO 103	Composite Materials	composites
			Understand different fabrication methods of polymer matrix composites
			Decide the failure of composite materials
			Acquire in-depth knowledge about the concepts of project management and understand the principles of project manageme
			Determine the critical path of a typical project using CPM and PERT techniques
34.	20CEO 101	Cost Management of Engineering Projects	Prepare a work break down plan and perform linear schedulin using various methods
			Solve problems of resource scheduling and leveling using network diagrams
			Learn the concepts of budgetary control and apply quantitative techniques for optimizing project cost
	20EEO 101	Waste to Energy	Understand the concept of conservation of waste
			Identify the different forms of wastage
35.			Chose the best way for conservation to produce energy from waste
			Explore the ways and means of combustion of biomass
			Develop a healthy environment for the mankind
			Interpret the nuances of research paper writing.
			Differentiate the research paper format and citation of sources
36.	2000 4 101	English for Research	To review the research papers and articles in a scientific manne
30.		Paper Writing	Avoid plagiarism and be able to develop their writing skills in presenting the research work
1			Create a research paper and acquire the knowledge of how and
			where to publish their original research papers
			Understand the making of the Indian Constitution and its featur
27			Understand the Rights of equality, the Right of freedom and the Right to constitutional remedies
37.	20EGA 102	Indian Constitution and	Have an insight into various Organs of Governance -
	-3 -5 11	Fundamental Rights	composition and functions
			Understand powers and functions of Municipalities, Panchayats and Co-operative Societies
			Understand Electoral Process, special provisions

S.No		Course	Course Outgames Statements
5410	Code	Name	Course Outcomes Statements
			To understand yoga and its benefits
		100	Enhance Physical strength and flexibility
38.	20EGA 103	Stress Management	Learn to relax and focus
		by Yoga	Relieve physical and mental tension through asanas
			Improve work performance and efficiency
			Develop their personality and achieve their highest goal of life
		Personality	Lead the nation and mankind to peace and prosperity
39.	20EGA 104	Development through Life Enlightenment	To practice emotional self regulation
		Skills	Develop a positive approach to work and duties.
		Skills	Develop a versatile personality
			Gain necessary Knowledge for self-development
			Learn the importance of Human values and their application in
			day to day professional life
			Appreciate the need and importance of interpersonal skills for
40.	20ECA 101	Value Education	successful career and social life
		Commence of the Control of Section (Control of	Emphasize the role of personal and social responsibility of an
			individual for all-round growth
			Develop a perspective based on spiritual outlook and respect
			women, other religious practices, equality, non-violence and universal brotherhood
	*		
			Ability to analyse and critically examine existing programs in disaster management regarding vulnerability, risk and capacity a
			different levels
			Ability to understand and choose the appropriate activities and
			tools and set up priorities to build a coherent and adapted disas
			management plan
			Ability to understand various mechanisms and consequences of
		Disease Michael L	human induced disasters for the participatory role of engineers in
41.	20CEA 101	Disaster Mitigation and Management	disaster management
		ivianagement	To understand the impact on various elements affected by the
			disaster and to suggest and apply appropriate measures for the
			same
			Develop an awareness of the chronological phases of disaster
			preparedness, response and relief operations for formulating
1/3			effective disaster management plans and ability to understand
			various participatory approaches/strategies and their application
			disaster management
			Illustrate the pedagogical practices followed by teachers in
10			developing countries both in formal and informal classrooms. Examine the effectiveness of pedagogical practices
	201771	Market Committee	Understand the concept characteristics and the concept characteristics are concept characteristics.
12.	20ITA 101	. Pedagogy Studies	Understand the concept, characteristics and types of educationa research and perspectives of research
			Describe the role of classroom practices, curriculum and barrier
			to learning
		3	Understand Research gaps and learn the future directions
			Develop passion towards Sanskrit language
		V V	Decipher the latent engineering principles from Sanskrit
		29 N N N N N N N N N N N N N N N N N N N	literature
43.	ZUEFA IIII	Sanskrit for Technical	Correlates the technological concepts with the ancient Sanskrit
196.4	2011/1/101	Knowledge	history
			Develop knowledge for the technological progress
			Explore the avenue for research in engineering with aid of
			Sanskrit

CHAITANYABHARATHIINSTITUTEOFTECHNOLOGY(Autonomous)

Gandipet, Hyderabad-75 Department of Electrical and Electronics Engineering

CourseOutcomesStatements for ME(PSPE)-R19

S.No		Course	Course Outcome Statement
5.110	Code	Name	Course Outcomes Statements
			Calculate voltage phasors at all buses, using various methods of load flow
			Calculate fault currents in each phase
	10000101	Power System	Rank various contingencies according to their severity
1.	19EEC101	Analysis	Estimate closeness to voltage collapse and calculate PV curves using continuation power flow
			Distinguish between conventional load-flow and state estimation in real-time applications
			Give a systematic approach for transient and steady state
			analysis of all power electronic converters with passive and active loads.
			Know and carry out transient and steady state analysis of
2.	19EEC102	Power Electronic	different power converters of different types of loads and switching sequences.
2.	19EEC102	Converters	Analyze power electronic device
	4		Analyze and design dc-dc and dc-ac converters.
			Analyze and design AC regulator and cyclo converter
		Power Systems Lab	Learn the measurement of sequence reactance of synchronous
	19EEC103		machine and 3-phase transformer
55			Knowledge about the relay characteristics
3.			Acquire Knowledge to estimate efficiency, regulation and ABC constants of 3-phase transmission line
			Learn about various types of faults
			Validate the I-V and P-V characteristics of a PV module
			Familiar with the usage of software for analysis of power electronic converters.
			Analyze the performance of converters by simulation
4.	19EEC104	9EEC104 Power Electronics Simulation Lab	Demonstrate the effects of different loads on various converters and inverters by experimentation
			Simulate different de chopper circuits
			Acquaint with the different speed control techniques of ac and d drives.
			Acquire knowledge to model the synchronous machine to carry out system studies
- 1			Acquire knowledge to evaluate performance of power system
			from steady state stability, transient stability and voltage stability point of view
5.	19EEC105	Power System Dynamics	Acquire knowledge to model PS controllers such as: excitation system, Turbine-Governor, FACTS controllers for stability studies
			Acquire knowledge to mitigate low frequency oscillations in power systems; improving system damping through supplementary excitation control (PSS)
			Acquire knowledge to analyze SSR oscillations occurring in series compensated network through damping controls and its importance in power transfer and stability of the system

	Course		Course Outcomes Statements
SNo	Code	Name	
			Demonstrate the knowledge of DC isolated and non-isolated regulators
			Demonstrate the knowledge of load and switch resonant converters
6.	19EEC106	Advanced Power	Demonstrate the knowledge resonant inverters
0.	DEECTOO	Electronic Circuits	Model and design DC-DC converters for renewable energy conversion.
			Apply the knowledge of dc-dc converters used in dc drives and renewable energy applications
		Power Electronics Lab	Distinguish the characteristics of different controlled switches and their applications.
	19EEC107		Demonstrate the effects of different loads on the performance o various phase controlled converters and choppers
7.			Understand the various control techniques used in inverters.
			Acquire the conversion principles of DC-DC and AC-AC converters
			Observe different speed control techniques of electric drives.
	19EEC108	D. C. L.	Validate the adaptability of economic load dispatch and load flow for a given situation by simulation results.
			Acquire the knowledge about formation of Impedance and Admittance Matrices
8.		19EEC108 Power Systems Simulation Lab	Acquire the knowledge to analyze the Symmetrical and un- symmetrical fault currents
			Acquire the knowledge to simulate various types of transmissio models
			Acquire knowledge of power distribution management system
			Know Distribution automation and its application in practice
		Plant in I Dames	Acquire the knowledge of SCADA system
9.	19EEE101	19EEE101 Electrical Power Distribution System	Acquire knowledge of optimization aspects of distribution system.
			Acquire knowledge of urban, rural distribution systems and application of capacitors in distribution systems

SNo		Course	Course Outes was Statement
0110	Code	Name	Course Outcomes Statements
			Recognize and identify the nature of the mathematical problems
			that are commonly encountered in power engineering
			Knowledge about vector spaces, linear transformation, Eigen values and eigenvectors of linear operators
			To learn about linear programming problems and understanding
10.	19EEE102	Mathematical Methods for Power Engineering	the Simplex method for solving linear programming problems in various fields of science and technology
		1	Acquire knowledge about nonlinear programming and various
			techniques used for solving constrained and unconstrained
		1.10	nonlinear programming problems
			Understanding the concept of random variables, functions of
			random variable and their probability distribution
			Have knowledge in analyzing the operation of power system in
			de-regulated and competitive environment
l li		DD44-01-0-1-0-1-0-1-0-1-0-1-0-1-0-1-0-1-0-	Acquire knowledge in operation and planning policies, in
11.	19EEE103	Restructured Power	deregulated environment.
100000		Systems	Have knowledge of transmission pricing methodologies.
			Know the different ancillary services provided by the ISO
			Acquire the knowledge of open access same time information
			system.
	19EEE104	Power Semi Conductor devices & Modelling	Select the suitable device for the Specific Power electronic
			application.
			Design current controlled semiconductors device and their
12.			parameters.
			Design voltage controlled semiconductors device and their
			parameters.
			Design of protection circuits.
			Design of firing circuits for different power electronic devices.
	19EEE105		Model the Electric Drive System
			Design modulation strategies of power electronics converters,
13.		Electric Drive	for drives application
13.		Systems	Design appropriate current/voltage regulators for electric drive.
1			Select and implement the drives for Industrial Process
			Implement various variable speed drives in Electrical Energy
			Conversion System
		-	Explain state of the art HVDC technology
			Demonstrate the knowledge of HVDC converter operation and
	_	-	methods of control
14.	19EEE106	HVDC	Demonstrate the knowledge of HVDC converter characteristics
			and control methods
1			Demonstrate the knowledge of the protection methods and AC-
			DC system interactions
			Demonstrate the knowledge of multi-terminal DC systems.
		-	Acquire the knowledge on design of solar PV systems
		_	Implement the concepts of wind power generation
1.5		Renewable	Demonstrate the suitability of non-conventional energy for grid connection
15.	19EEE107	The Control of the Co	
			Understand the working of distributed generation system in autonomous/grid connected modes.
			Analyze economic aspects of power generation and its power

SNo	Course		Course Outcomes Statements
SNo	Code	Name	
			Apply the concepts of biological and artificial neural networks
	10EEE100	Artificial Intelligence	Acquire the knowledge of fuzzy systems
17	19EEE108	Techniques	Acquire the knowledge of GA
16.			Demonstrate the concepts of ANFIS
			Integrate the intelligent system approaches relevant to Power systems
			Recognize the need and architecture of digital relays
	10000100	Digital Protection of	Comprehend the application of mathematics in power system protection
17.	19EEE109	Power Systems	Acquainted with the basic blocks and their role in digital protection
			Attain the knowledge of sinusoidal wave based algorithms
			Know Walsh functions and least square techniques and their usage in protection
			Acquire the knowledge of theoretical concepts and standards of Power Quality issues and its measurement
			Acquire knowledge in identifying sources of harmonics
18.	19EEE110	Power Quality	Acquire the knowledge to analyze voltage sag in distribution systems
		Chicago Handrada	Acquire the knowledge Harmonic Filtering Techniques
			Acquire the knowledge in Solutions to power factor correction Wiring and Grounding Problems
	*		Select the appropriate compensating technique/
			device/controller based on the needs of inter connected power
			transmission systems.
19.	19EEE111	FACTS and Custom power devices	Demonstrate the knowledge of shunt compensators (i.e. SVC, STATCOM) for the end of line voltage support and transient stability problem
17.			Analyze the operation and control of GCSC, TCSC, TSSC, TCVR, TCPAR and SSSC.
			Demonstrate the knowledge of operation and control of UPFC
			Identify the power quality problems and demonstrate the knowledge of various types of filters and UPQC
			Identify different power electronic circuits for designing
		Switch mode &	converters.
			Design various types of SMPS for electrical applications.
20.	19EEE112	Resonant Converters	Design control methods for SMPS
		resoluti Conventions	Analyze the stability using Bode plots for the converters.
			Select different components used in SMPS hardware.
			Acquire the background required for engineers to meet the ro of energy managers
21.	19EEE113	Energy Auditing	Acquire the background required for engineers to meet the ro of energy manager
2	1,22,13	& Management	Demonstrate energy conservation aspects
			Apply the energy conservation techniques to industrial loads
			Perform basic energy audit in an organization
			Appreciate the difference between smart grid & conventional grid.
			Acquire knowledge of smart devices such as PMU, IED etc
22.	19EEE114	Smart Grids	Apply smart metering concepts to industrial and commercial installations.
		(m. nontra du montata)	Formulate solutions in the areas of smart substations,
			distributed generation and wide area measurements.
			Acquire knowledge of micro grid and modern communication
			technologies

SNo	Course		Course Outcomes Statements
SINO	Code	Name	
			Acquire knowledge about high voltage generation techniques
23.			Acquaint with the different methods of generating high voltage
			AC/DC and impulse voltages and currents
	19EEE115	High Voltage	Acquire the knowledge of measurement techniques for high
20.	TABLETIS	Engineering	voltage AC/DC and impulse voltages and currents
			Acquire knowledge about planning and layout of HV labs.
			Attain methods of shielding, grounding and other safety
			precautions of HV labs
			Be familiar to the models of describing hybrid vehicles and the
			performance.
		Pl 1111.11	Model the electric vehicles with different acceleration and
24.	19EEE116	Electric and Hybrid Vehicles	range
		venicies	Design various configuration and control strategies for electric drives
			Analyze the different possible ways of energy storage.
			Design of a Hybrid Electric Vehicle, Battery Electric Vehicle
			To understand the basic concepts of business analytics
			Identify the application of business analytics and use tools to
			analyze business data
			Become familiar with various metrics, measures used in business
25.	19CSO101	Business Analytics	analytics
43.	19050101	Business Analytics	Illustrate various descriptive, predictive and prescriptive method
			and techniques
			Model the business data using various business analytical
			methods and techniques
			Identify the causes for industrial accidents and suggest preventive
			measures
L.			Identify the basic tools and requirements of different maintenance
			procedures.
			Apply different techniques to reduce and prevent Wear and
26.	19MEO101	MEO101 Industrial Safety	corrosion in Industry.
	77770		Identify different types of faults present in various equipment lik
			machine tools, IC Engines, boilers etc.
			Apply periodic and preventive maintenance techniques as
			required for industrial equipments like motors, pumps and air
			compressors and machine tools etc
			Formulate a managerial decision problem into a mathematical
			model
		Introduction to	Apply transportation problems in manufacturing industries
27	16MEO 102	Optimization Techniques Industrial Safety	Build and solve assignment models
			Apply project management techniques like CPM and PERT to
			plan and execute project successfully
			Apply sequencing concepts in industry applications
			Classify and characterize the composite materials.
			Describe types of reinforcements and their properties.
	19MEO103	Composite Materials	Understand different fabrication methods of metal matrix
28.			composites.
			Understand different fabrication methods of polymer matrix
			composites.
			Decide the failure of composite materials.

SNo	Course		Course Outcomes Statements
	Code	Name	The state of the s
	19CEO 101	Cost Management of Engineering Projects	Acquire in-depth knowledge about the concepts of project management and understand the principles of project management.
			Determine the critical path of a typical project using CPM and PERT techniques.
29.			Prepare a work break down plan and perform linear scheduling using various methods
			Prepare a work break down plan and perform linear scheduling using various methods
			Learn the concepts of budgetary control and apply quantitative techniques for optimizing project cost.
30.	19EEO101	O101 Waste to Energy	Understand the concept of conservation of waste
			Identify the different forms of wastage
			Choose the best way for conservation to produce energy from waste
			Explore the ways and means of combustion of biomass
			Develop a healthy environment for the mankind

${\bf CHAITANYABHARATHIINSTITUTEOFTECHNOLOGY (Autonomous)}$

Gandipet, Hyderabad-75

Department of Electrical and Electronics Engineering

Course Outcomes Statements for ME(PSPE)-R16

S No		Course	Course Outcomes Statements
SINO	Code	Name	
			Demonstrate the knowledge of switching characteristics of various power semiconductor devices
			Design dc-dc buck ,boost, buck-boost and Cuk converters
		Personal Property Law	Design dc-dc buck ,boost, buck-boost and cuk converters
		Power Semi-	Demonstrate the knowledge of various PWM techniques used in
1.	16EEC101	Conductor Devices and Circuits	dc-ac single and three phase inverters
- 1			Analyze various types of resonant converters Comprehend various dc-dc converters (with isolation) used in
- 1			SMPS and also able to demonstrate electrical power supply the
		32	protection schemes
			Able to know different planning models in the distribution
			system planning
			Will have knowledge of role and functioning of sub-
			transmission and distribution sub-stations
			Capable of doing the primary feeder and secondary feede
		Distribution System	voltage drop and power loss calculations
2.	16EEC102	Planning and	
		Automation	Competent to calculate the reactive power requirements of
			distribution system
			Acquire knowledge of different aspects of Distribution
			automation
			Capable of finding load flow results of distribution system using
			ladder iterative technique. Will have knowledge to draw network graphs, formulate bus
			incidence matrices form the graphs
			Able to form and manipulate bus admittance and impedance
			matrices, based on an understanding of incidence and primitive
			network, so as to reflect changes in network
			Able to form and manipulate bus admittance and impedance
		Advanced Computer Methods in Power Systems	matrices, based on an understanding of incidence and primitive
3.	16EEC103		network, so as to reflect changes in network
			Will formulate power flow equations and become adept to solvi
			these equations by applying Gauss-seidel and Newton-Raphson methods.
			Will have knowledge to calculate short circuit calculations for
			different types of faults
			Will develop algorithms and write programs for power flow
			solutions by iterative techniques.
			Acquire knowledge to model the syn. m/c to carryout system
	16EEC104	Power System Stability	studies.
			Acquire knowledge to evaluate performance of power system
			form steady state stability, transient stability and voltage stabili
			point of view. Acquire to knowledge to model PS controllers such as excitation
			system, Turbine-Governor FACTS controller for stability studie
4.			Acquire knowledge to mitigate low freq Oscillation in power
			system; improving system damping through supplementary
			excitation control
			Acquire knowledge to analyze SSR Oscillation occurring in
			series compensated network through damping controls and its
			importance in power transfer and stability of the system

SNo	Course		Course Outcomes Statements
2140	Code	Name	Course Outcomes Statements
	16EEC105	Advanced Electric Drives	Identify and consider the requirement of power converters for a given application
5.			Illustrate the digital methods of DC motor speed control techniques.
			Show how the changes effect in different speed control scheme of Induction motor.
			Analyse the performance of Synchronous motor with and without sinusoidal supply
			Recognize and formulate problems encountered by special motor drives for a particular application.
			Select the appropriate FACTS device/controller based on the needs of inter connected power transmission systems.
			Select various converter topologies used in FACTS for harmon reduction
6.	16EEC106	Flexible AC Transmission Systems	Demonstrate the knowledge of shunt compensators(i.e SVC,STATCOM) for the end of line voltage support and transient stability problems
			Analyze the operation and control of GCSC, TCSC and SSSC.
			Describe the principles, operation and control of UPFC and
			also demonstrate the knowledge of UPFC for P and Q control
			Validate the adaptability of economic load dispatch and load flow for a given situation by simulation results.
	16EEC107	Power Systems Lab	Design a controller for FACTS application by simulation
7.			Demonstrate the effects of different sequence reactances of a synchronous machine by experimentation Acquainted with the
			characteristics of different relays by experimentation Acquainted with the characteristics of different relays by
	16EEC108	Power Electronics Lab	Analyze the performance of converters and inverters by simulation results
			Design a control circuit with different orientations of devices by simulation
8.			Demonstrate the effects of different loads on various converters and inverters by experimentation.
			Acquainted with the different speed control techniques of IM
			Know how to use the simulation software to design and fabricate different power electronic circuits.
	16EEC109	9 Seminar-I	Acquire knowledge in systematic way of carrying out literate survey and select the topic for seminar.
			Acquire knowledge in preparing detailed summary and to gain in -depth knowledge on the chosen topic.
9.			Acquire knowledge in preparing summary highlights in the direction in which work has progressed and the gaps.
			Acquire knowledge in preparing summary highlights in the direction in which work has progressed and the gaps.
			Acquire knowledge in communication skills and clarity in expression.

SNo	Course		
5110	Code	Name	Course Outcomes Statements
		Seminar-II	Acquire knowledge in systematic way of carrying out literate survey and select the topic for seminar
10/80	16EEC110		Acquire knowledge in preparing detailed summary and to gain in depth knowledge on the chosen topic.
10.	TOLLECTTO		Acquire knowledge in preparing summary highlights in the direction in which work has progressed and the gaps
			acquire knowledge to fill gaps in highlighting the method of solution.
			Acquire knowledge in communication skills and clarity in expression.
11.	16EEC112	Project Seminar	Develop the skills of analyzing a problem, solving it by different approaches, building interactions with the other organizations.
			Develop the skills of presenting a concept, independent learning and addressing the societal issues economical author
	16EEC113	Project Work & Dissertation	Survey by referring to reputed journals/ textbooks etc.
			survey paper: Design, Analysis, experimental etc.
12.			Able to prepare a detailed summary of the paper as per the classification and choose the area and topic fitting in to the classification such as simulation studies, experimentation, preparing prototype etc.
			Acquire knowledge to conduct simulation studies/ experimental studies and tabulate the results and compare the performance and choose the design parameter to improve the performance etc.
			Acquire knowledge in writing the project work report in different chapters: Introduction, back ground, description, problem formulation, Analysis, Discussion, results and suggestions for further studies and conclusions.
	16EEE101		Model mathematically all types of DC machine using state variable form
			Obtain stability conditions of all types of DC machines using their characteristic equation deriving from transfer function of the machine.
13.			Transform variables from one reference frame to another reference frame.
			Model 3Q symmetrical induction machines using reference frame theory under study state condition
			Analyze the 3Q symmetrical induction motor dynamic performance during transient condition
			Model 3Q synchronous machines using transformation of reference frames by Park's transformation under steady state and analyze dynamic performance during transient conditions

		Course	Course Outcomes Statements
SNo	Code	Name	
14.		Modern Control	Acquire knowledge to represent the system in state space form and analyze controllability and observability aspects
			Have knowledge in problem formulation of non-linear systems and to analyze its performance.
	16EEE102		Acquire knowledge in defining the stability of a non-linear system using Lyapunov stability method.
		Theory	Acquire knowledge in formulating an optimal control problem and finding its solution using mathematical modeling
			Acquire knowledge pertaining to Adaptive control systems and applications.
			Comprehend the basic components of static relays and their characteristics
			Understand the operating principles of different distance relays.
15.	16EEE103	Advanced Power	Acquaint with the characteristics & application of different protection schemes for AC generators / motors.
15.	TOLLETOS	System Protection	Acquaint with the characteristics & application of different protection schemes for AC generators / motors.
			Know various types of pilot protection schemes, their adaptability and basic principle of travelling wave relays.
			Acquire knowledge in real-time computer control of power system and functional aspects of energy control centre and
Ž.			management system.
			Acquire knowledge to distinguish the difference between loa
	•		flow studies and state estimation and role of SE in ener
			Acquire knowledge in studying the importance of contingency
		THE STATE OF THE S	analysis at planning stage for secured operation of power
	1	Real Time Applications in Power Systems	system; and simulating the contingency studies with different
16.	16EEE104		methods.
			Acquire knowledge in studying the importance of security
			analysis and challenges in secured operation of power system
			in real-time environment
		(P	Acquire knowledge to study the operation of power system in
			de-regulated environment and grasp the salient features of Electricity Act 2003 and Indian Electricity Grid Code.
		Deregulation of Power Systems	Have knowledge in analyzing the operation of power system
			de-regulated and competitive environment Acquire knowledge in operation and planning policies, in
			deregulated environment.
	16EEE105		
17.			Know the different ancillary services provided by the ISO
			Acquire the knowledge of open access same time information
			system.
			Acquire the concepts of available transfer capability and
			methodologies to calculate ATC
			Understand the concepts of ANN
	16EEE106		Acquire knowledge of Fuzzy systems.
		Soft Computing Techniques to Power Systems	Able to understand fundaments and different selection
			mechanisms in genetic algorithm
18.			Acquire knowledge of PSO and its variations.
- Aracit			Capable of applying ANN, Fuzzy, GA, PSO techniques to
			power system problems Distinguish between wind and wave energy systems.
			Design suitable OTEC plant and geothermal plant for the
			available source of heat.

SNo	0.1	Course	Course Outcomes Statements
	Code	Name	- acomes statements
			Know the importance of RES for India and know the factors which influence RES selection
			Design solar thermal applications
19.	1/CEPR+44	Renewable Energy	Model solar PV system
19.	16EEE103	Sources	Design WEC system according to the available environmental
	1	3041003	condition.
		п	Distinguish between wind and wave energy systems.
	1		Design suitable OTEC plant and geothermal plant for the
-			a dilitation source of field
			Have the knowledge of principles of reliability applied to
			power systems
		1	Acquire the knowledge to carryout evaluation procedures of
20		5 # 1	generator capacity reserves.
20.	16EEE108	Reliability Modeling in	Illustrate the evaluation of characters
		Power Systems	Illustrate the evaluation of operating reserve of a system.
			Acquire knowledge to formulate mathematical models for
			rendomly evaluation of Generation Transmission
			Compare and contrast various techniques of evaluation with regard to distribution systems.
			1 105th a to distribution systems
		Power Quality Engineering	Have the knowledge of theoretical concepts and standards of
	16EEE109		Tower Quality and Issues in industrial evetame
21.			Have the knowledge to calculate and analyze voltage sag in distribution systems
	TOLLLIUS		
			Acquire knowledge in identifying sources of harmonic.
			Acquire the knowledge in mitigation of harmonics in industria and commercial loads systems
	<u> </u>		
			Acquire the knowledge in measurement of PQ problems.
			Acquire knowledge of Energy management principles and the evolution of EC Act 2001 & 2003.
			Familiar with energy audit instrument
			Familiar with energy audit instruments and Energy Audit case studies
22.	16EEE110		
	TOLLETTO	Management	Identify the need of Demand side management in the Energy conservation aspect.
			Compare and contrast the Engrave of Contrast the Engravior of Contrast the Engrave of Contrast the Engravior of Contrast the Engrave of Contrast the Engrave of Contrast the Engrave of Contrast the Engrave of Contrast the Engravior of Contrast the Engrave of Contrast the Engrave of Contrast the
			Compare and contrast the Energy efficient systems in various sectors.
			Recognize the role of technology in Energy management perspective.
			Have knowledge of Architecture
		Advanced Microprocessor Systems	Have knowledge of Architecture features and function of 8086, 80386, 80486, Pentium, Motorale (1900)
	16EEE111		80386, 80486, Pentium, Motorola 68000 microprocessors.
			Have knowledge of features of MIPS, AMD
23.			Acquire basic knowledge on 68020, 68030 and 68040 Microprocessors
	n i		Acquire knowledge of Court
			Acquire knowledge of functional features of RISC, Dec Alpha AXP and Sun SPARC
			THE WIND STARC
			To get basic knowledge on Pentium, Pentium pro Pentium II
			The real of the re
		Digital Control Systems A A CC H CC A	require knowledge on /-transforms and their :
			The state of the s
			Acquire knowledge on developing a discrete time system in state
			space form and also to analyze stability, controllability, observability aspects
4.			Acquire knowledge to design discrete time control systems
			through conventional methods using compensators and PID
			Have knowledge of pole placement and design of state feedback
			Acquire knowledge of Adaptive controls and State Estimation
		t t	hrough Kalman filter.

0.11	Course		Course Outcomes Statements
S.No	Code	Name	
			Acquire knowledge about HVDC converter operation and methods of control
			Acquire knowledge about methods of HVDC converter control
25.	16EEE113	HVDC Transmission	Acquire knowledge about the protection methods in HVDC system
	123000000000000000000000000000000000000		Acquire knowledge about the protection methods in HVDC system
			Acquire knowledge about multi-terminal DC systems
	_	Research Methodology & Professional Ethics	Acquire knowledge in distinguishing the difference in types of research and formulate area of research in a systematic manner.
	16EEE114		Acquire knowledge to prepare research design, outline important concepts, following relevant standards and codes, and their importance in analysis.
26.			Acquire knowledge in preparing research project proposal outlining the objectives, deliverables, and beneficiary's financial requirements in preparing the report.
			Acquire the knowledge of report writing, technical paper writing and Journal paper writing.
			Acquire the knowledge of Intellectual property rights, citation etc.
			Acquire the concepts of MOU and MOA.
27.	*	Soft skills lab	Be effective communicators and participate in group discussions and case studies with confidence. Also be able to make presentations in a professional context.
	16EG104		Write resumes, prepare and face interviews confidently. Be assertive and set short term and long term goals. Also learn to manage time effectively and deal with stress.
			Make the transition smoothly from campus to corporate. Also use media with etiquette and know what academic ethics are.
			Correct and complete sentences, have a good vocabular and comprehend passages confidently
