

**DEPARTMENT OF  
MECHANICAL ENGINEERING**

***SCHEME OF INSTRUCTION AND SYLLABI  
OF***

**M.E.  
(Mechanical Engineering)**

**Specialization:**

**CAD/CAM**

**2016-17 – CBCS**

**CHAITANYA BHARATHI INSTITUTE OF TECHNOLOGY  
(Autonomous)**

Affiliated to Osmania University

**Hyderabad – 500 075, Telangana, INDIA**

**CHAITANYA BHARATHI INSTITUTE OF TECHNOLOGY**

(AUTONOMOUS)-CBCS

Gandipet, Hyderabad – 500 075

**INSTITUTE**

*Vision*

To be a centre of excellence in technical education and research

*Mission*

To address the emerging needs through quality technical education and advanced research

**DEPARTMENT**

*Vision*

To be a Pace Setter in the field of mechanical Engineering by providing conducive environment for understanding and applying its principles to cater the needs of Society

*Mission*

To impart quality & innovative technical education to the students of mechanical engineering for their professional achievements in consultancy, R&D and to become successful entrepreneur enabling them to serve the society in general and the industry in particular

**CHAITANYA BHARATHI INSTITUTE OF TECHNOLOGY**

(AUTONOMOUS)

Gandipet, Hyderabad – 500 075

MECHANICAL ENGINEERING

**Programme: M.E (CAD/CAM)**

**Programme Educational Objectives:**

1. Will become professional contributors in the industry related to the area of CAD/CAM
2. Will excel in research & development and consultancy
3. Will become entrepreneurs in CAD/CAM industry.

POs describe what students are expected to know or be able to do by the time of graduation from the program.

1. To demonstrate knowledge in core subjects of CAD/CAM with mathematical & numerical orientation.
2. To exhibit proficiency in usage of software packages of solid modeling, meshing and analysis.
3. To understand advanced technologies in the area of Manufacturing & Automation in Manufacturing
4. To possess the necessary skills to prepare the project proposals by referring technical papers in various reputed journals, pertaining to CAD/CAM.
5. To Understand the concepts and principles of Engineering Research Methodology and apply the same for designing and conducting experiments related to the area of CAD/CAM.
6. To acquire leadership qualities by organizing and participating in various events.

Note: PEOS are expected to achieve after 2 years of graduation

**Scheme of Instruction & Examination  
M.E. (CAD/CAM) – Mechanical Engineering - 4 Semesters (Full Time)**

| Semester - I   |  |                      |           |                     |                     |             |             |           |

Note: Six core subjects, Six elective subjects, Two Laboratory Courses and Two Seminars, Mini Project and Soft Skills should normally be completed by the end of semester II.

\* Project seminar presentation on the topic of Dissertation only, 50 marks awarded by the project guide and 50 marks by the internal committee

**Credit requirements for the award of degree, lower limit and upper limit of credits for registration by a student in a semester Credit Requirement for the award of M.E/M. Tech. Degree is 69**

With effect from the academic year 2016- 2017

Scheme of Instruction & Examination Post Graduate course in Mechanical Engineering

with specialization in **CAD/CAM**

**Course duration: 4 Semesters (Full – Time)**

| Objective (s)  | 1. To know the importance of limits, fits and tolerances in design of machine and mechanical components<br>2. To learn design criteria of machine components according to standards and Theories of failures<br>3. To learn application of principles to design different gears and gear boxes.<br>4. To provide the design concepts of machine tools, automobiles and mechanical handling equipments for dynamics and thermal aspects.<br>5. To provide the students the knowledge of design of Mechanical handling equipments like power plants and Construction fields              |                       |   |        |               |              |                  |          |
| Outcome (s)  | 1. Be able to know the importance of limits ,fits and tolerances and Testing standards for design and manufacturing<br>2. Be able to do the complete design and analysis of shafts, bearings and casings by considering design and machining allowances according to standards and requirements.<br>3. Be able to do the design and analysis of Different gears and gear boxes.<br>4. Be able to do the design of brakes of machine tools, automobiles and mechanical handling equipments for dynamics and thermal aspects.<br>5. Be able to design of Mechanical handling equipments. |                       |   |        |               |              |                  |          |

| Objective (s)  | 1. To make students understand the basic concepts of various rapid prototyping technologies.<br>2. To understand and apply criterion for selecting appropriate RPT technique for any given application.   |                       |   |   |        |                                 |                  |           |
| Outcome (s)  | 1. identify different process and key characteristics of RP technologies and commonly used RP systems<br>2. describe various CAD issues for rapid prototyping and related operations for STL model generation and manipulation<br>3. Explain and summarize typical rapid tooling processes for quick batch production of plastic and metal parts<br>4. critically explore technologies used for rapid prototyping in terms of their parameters, application, limitations, cost, materials, equipment, outcomes and implications<br>5. distinguish the types of Additive Manufacturing capabilities based on part geometry customer demands and CNC machine capabilities<br>6. identify different post processing techniques involved after rapid prototyping. |                       |   |   |        |                                 |                  |           |

### Objective(s):

1. To produce CAD drawings which communicate the appropriate manufacturing details, standards, and specifications..
2. To effectively communicate with others using oral, written, and graphical methods and procedures..
3. To function effectively on teams or on group projects and assume leadership roles when appropriate..
  4. To introduce STUDENTS to the basic tools of computer-aided design (CAD) and computer-aided manufacturing (CAM)
  5. To understand the basic analytical fundamentals that are used to create and manipulate geometric models in a computer program
  6. To prepare the student to be an effective user of a CAD/CAM system.

**Outcome(s):** After the completion of the course, students will be able to

1. use parametric CAD software for geometric modeling of mechanical designs
2. visualize of machine components and assemblies before their actual fabrication through modeling, animation, shading, rendering, lighting and coloring
3. apply of CAD computational analysis tools to engineering design.
4. create a complete CAD documentation for an engineering design.
5. model complex shapes including freeform curves and surfaces Explain the basic concepts of CNC programming and machining
6. implement CNC programs for milling and turning machining operations

### List of Exercises:

#### CAD

1. Understanding of various CAD commands and creating simple objects.
2. Understanding of holes, cuts and model tree relations.
3. Creation shafts, rounds, chamfers and slots.
4. Sketch Tools & Datum planes.
5. Creation of objects by revolved features, patterns and copies, sweeps and blends.
6. Creation of engineering drawing details such as dimensioning, sectional views, adding esthetics.
7. Assembling of part models using constraints with bill of materials.
8. Assembly operations - part modifications, adding another assembly features – display.
9. Mass properties and tolerance analysis.

#### CAM

1. Understanding of CNC Machines and CNC Programming and Creation of 2-D contour Pockets, Slots
2. Drills and Facing, 2-D high Speed blend
3. Surface Roughing for Bottle die
4. Surface finishing for Phone die
5. Manufacturing of Crane Hook
6. Manufacturing of Connecting Rod
7. Manufacturing of Turbine Blade
8. 3-D Machining using ball nose cutters

### Objective(s)

1. To understand how and why finite element technique works
2. To learn the selection of the element type for a defined problem.
3. To use ANSYS package to solve engineering problems for a variety of application
4. To learn to use finite element analysis in design
5. To know various fields of engineering where these tools can be effectively used to improve the output of a product
6. To impart the fundamental knowledge on using various analytical tools like ANSYS Engineering Simulation.

### Outcome(s):

Students will be able to:

1. Use the tools like ANSYS in solving real time problems and day to day problems.
2. Apply the Finite Element Method for the calculation stresses, strains and deformations in any component
3. critically evaluate the model results in comparison to simplified analytical solutions
4. Versatility in using these tools for any engineering and real time applications.
5. Gain knowledge on utilizing these tools for a better project in their curriculum
6. Face industry with confidence in using these tools in their respective jobs

### List of Experiments:

1. Introduction to Finite Element Analysis Software.
2. Static analysis of a corner bracket.
3. Statically indeterminate reaction force analysis.
4. Determination of Beam stresses and Deflection.
5. Bending analysis of a Tee-shaped beam.
6. Analysis of cylindrical shell under pressure.
7. Bending of a circular plate using axisymmetric shell element.
8. Stress analysis in a long cylinder.
9. Solidification of a casting.
10. Transient Heat transfer in an infinite slab.
11. Transient Thermal stress in a cylinder.
12. Vibration analysis of a simply supported beam.
13. Natural frequency of a motor generator.
14. Thermal – structural contact analysis of two bodies.
15. Drop test of a container (Explicit Dynamics).

### Objectives:

First year ME students will each do a 14-week mini project, each generally comprising about one week of prior reading, twelve weeks of active research, and finally a presentation of their work for assessment (see assessment information below). Each student will be allotted to a Faculty supervisor for mentoring.

Mini projects should present students with an accessible challenge on which to demonstrate competence in research techniques, plus the opportunity to contribute something more original. Mini projects should have inter disciplinary/ industry relevance. The students can select a mathematical modeling based/Experimental investigations or Numerical modeling. All the investigations are clearly stated and documented with the reasons/explanations. All the projects should contain A clear statement of the research objectives, background of work, Literature review, techniques used, prospective deliverables, benefit from this [line of] research, Detailed discussion on results, Conclusions and references.

---

### Outcomes:

Students are able to

1. Formulate a specific problem and give solution
  2. Develop model/models either theoretical/practical/numerical form
  3. Solve, interpret/correlate the results and discussions
  4. Conclude the results obtained and write the documentation in standard format
- 

### Assessment:

1. 50 % of marks for a scientific report on the project.  
Regarding the formatting and structure, the report should be written as a journal article using the style file of a journal appropriate for the field of the research (which journal format is most appropriate should be agreed between student and supervisor). If the journal you selected has a page limit, it can be ignored but the report should not exceed 8000 words (common sense should be used if there are a lot of equations).

Regarding content, the report should be understandable by your fellow students, so the introduction and literature review could be a bit more detailed than in a research paper. The results and discussions are in elaborate form and at end conclusions and include references.

2. 50 % of marks for an oral presentation which will take place at the end of the semester and evaluation by a committee consist of Supervisor, one senior faculty and Head of the department or his nominee.
