Quality of end semester examinations: Setting of the question papers and valuation are carried out by external examiners, The list of the examiners is supplied to the Controller of the Examinations, by Chairman, Board of the Studies of the department concerned. Moderation is carried out by faculty concerned to the subject, who takes care of topographical errors and also pattern of the syllabus maintained in the question paper. If the student wants to go for re-valuation in any subject, his or her paper is evaluated by two examiners either internal or external examiners. There should not be any deviation in marks between these two (up to 10% is allowed), If not, the paper will be evaluated by third examiner. The marks given by third examiner is final.

Quality of the internal examinations: Two internal examinations are conducted in a semester per course. Course outcomes (CO) are mentioned against each question in order to evaluate CO-PO mapping. Total marks for the subject or course in internal examination is thirty marks. It consist of two parts, Part-A and Part-B. Part-A has two or three questions, which carries six marks, while part-B has three questions, out of which two are to be attempted, which carries fourteen marks. Standard model paper, consisting of questions from previous university papers is set in every course, from which internal examination paper is set. Average of these two internal examination will be considered for the evaluation of the final marks.

Evaluation of Assignments: Two assignments are given in a semester for each course. One assignment before first sessional examination and other before the second internal examination, Average of these two will be considered for the evaluation of the marks. Assignments will be given from standard model paper. Total marks, gained by the student is sum of internal examination marks and assignment marks.

9.	<p>Quality of Student Projects</p> <p>(i) B.E/B.Tech -</p> <p>(ii) M.E/M.Tech -</p> <p>Quality of student projects</p> <p>a. Clear and precise objectives: Objective of the project is an essence of the project. Student has to write the abstract of the proposed project. Abstract of the project carries back ground of the problem, aim or objective, design variables, methodology adopted and brief results. Student has to identify the problem, so he or she has to study the background of the problem in order to define objective of the proposed work.. Objectives or goals must be clearly defined before initiating the project. Objectives must be solvable and achievable.</p> <p>b. Methodology: Before going for methodology, or materials and methods, student has to define number of variables existing in his/her project. Student has to define whether the given project is on the basis of experiment or simulation work. If the student is executing experimental work, he/she has to draw the schematic sketch of the experimental work indicating number of components present in the program. Procedures of fabrication of the component are to be written. Student has to clearly identify operating variables existing in the experiment. Equations related to the different parameters are to be clearly written. Allowances are to be mentioned on each component. Un-certainty analysis is to be performed on instrumentation and procedure. If the student is adopting simulation procedure or any analytical methods, he or she has to write equations and the assumption made in the simulation program.</p> <p>c. Literature review: The student has to go for literature review in order to formulate or identify the problem, Literature review is work carried out by the previous researchers related to the present work. Once literature review is made, it is easy to identify research gaps. Once research gasps are identified, problem or aim can be formulated. Literature review is to be made from reputed National/International journals or proceedings of National or International Conferences in order to have good and quality literature review.</p> <p>d.Design or setting of experiment. A mathematical tool namely design of experiment is to be employed in order to determine number of experiments to be carried out and number of the variables existing in the experiment which</p>	

	<p>effect the performance of the experiment.</p> <p>e. Bench marks used /Assumptions made. In any simulation program, number of assumptions is to be made in order to simplify the procedure.</p> <p>f. Interpretation of the results: A theoretical result can be interpolated with experimental result or with theoretical result by other researcher. However, the percentage of deviation between these two results must be within the limits.</p> <p>g. Overall presentation of the report: The report should consists of conclusions which give us summary of the work. The list of papers consulted should be given at the end of the report, Appendices are to be given at the end of the report whenever they are necessary</p>
