The faculty and student coordinators have initiated the zoom session, introduced the speaker, invited HoD for presenting his opening remarks and also monitored the students' attendance during the session. Dr. P. Ravindra, Prof. & Head has welcomed the speaker, faculty and students. He has complimented the alumnus for his enthusiasm to reconnect with the department and share his experiences for the benefit of the budding engineers. He has highlighted the advantages of such lectures on the students learning outcomes.

Objective of the lecture:

To enlighten the students on role played by chemical engineers in chemical manufacture sector with Pharmaceutical industry as a case study.

Summary of the lecture:

The Guest Lecture highlighted the importance of the various course subjects, unit operations and processes to design and develop manufacturing processes like Semi-Conductors, Nano Technology and Nano catalysis, Food processing, Petrochemicals, Polymers, Water etc.

The challenges handled by chemical engineers were explained that ranged from high precision and rate controlled operations, targeted drug release, environment control, bioprocess development, process optimization, reactions, alternative energy sources, replace usage of metal. As Chemical Engineering is a vast field, it open its reach to a huge possibilities for startup companies with precision and digital applications.

The pharmaceutical industries are of two types:

- 1) Innovators
- 2) Generics

Innovators:-Theses industries spend their time and money in formulating the drug for a particular cause, gets the drug patented and then release the drug in market. For Example GSK and Pfizer.

Generics:-When the patents filed by innovators gets expired, the Generics make the alternative for the drug made by Innovators, which is more affordable and effective. For Example Aurbindo Pharma and Dr.Reddy's Laboratory

There are two types of bulk drug manufacturers:

- 1) Active Pharmaceutical Ingredient(API)
- 2) Drug Substance Manufacturers

Responsibilities of chemical engineers in a Pharma industry may be in the range of:

- Production Engineer:-Takes care of capacity management, Increase in no. of batch production and optimization in process timelines to get high output.
- Project Engineer:-Brings latest facilities to the plant, designing the facility and controlling the process.
- Safety Engineer:-Prevention from a runaway reaction and to keep the plant and the staff safe.
- Business Development:-To marketing and planning to support the growth and expansion.
- Technology Transfer Engineer:-To transfer the technology from R&D team and implement it to the production plant.
- Operational Excellence and CIP:-To bring continuous improvement to the project and improve the efficiency to the yield of drug produced.
- Project Management and Quality Assurance:-To assure the quality of the product according to the ICH guideline.

Roles and functions:

- Safe Process Development:-To take measures to stop an operational catastrophe in plant
- Kilo Lab and CPP:-Optimization in scaling the reaction from lab size to plant size to check the

process parameters.

- Continuous Manufacturing:-To reduce the size of the process reactor to make it cost efficient
- Polymorph Development:-To change the shape of the drug for high effectiveness and engineering the particle form the purpose(Particle Engineering)
- Process Analytical Tools:-Monitoring the reaction on a periodic basis to check the growth of the drug crystals.
- Scale up Development:-Bringing new technology and innovations to the project for its efficiency.

Case study – Addition of an exothermic reagent to a reaction:

- Initial study at lab scale: for example given was 100ml reagent added in 100 minutes.
- Scale-up studies: the average flow rate of the reactant is increased, AKA the time taken to add the same amount of reagent is reduced.
- The amount of the heat generated by any exothermic reaction is calculated that is necessary not only to cool the apparatus, but also to evaluate the risk, scalability, and criticality.
- The criticality of a process is especially important as it is helpful to predict the worst case scenarios or troubleshoot, accurately.
- A device called the reaction calorimeter was introduced as way to measure this quantity accurately in a specific period of time.

Closing remarks by faculty coordinator:

Faculty coordinator, Dr. Naga Prapurna has expressed profound thanks to the speaker for accepting the department invitation at a short notice. The powerpoint presentation and lecture was relevant to the topic for sem-iii students to understand the significance of the chemical engineering course. The speaker was requested to help the department through the following future interactions like:

- Revive the MoU with Dr. Reddys labs, Hyderabad for collaborative academic and research activities.
- Offer collaborative projects for U.G students as part of their sem-viii U.G project work
- Permit students for industrial visit
- Allow students for summer internship work
- Plan to submit projects for funding, in area of mutual interest.

Outcomes of the lecture:

The expert from pharmaceutical field has laid a foundation for the budding chemical engineers to understand the roles, responsibilities, and challenges. To think about the different opportunities lying in pharmaceutical industry for work, design, development and research. The students have understood through the case study as to how they could apply their theoretical learning in such industries.

Current Market Situation

Mid 2020

- Market slowdown worldwide
- No major investments in new projects
- Already started projects – On hold/Progressing at slow place
- Freeze in recruitments...

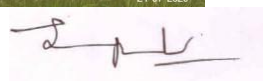

BUT

- **In near future (End of 2020/ Start of 2021) there will be many jobs in the market**

ALUMNI TALK-2

Speaker : Mrs.Divya Ogoti, 2010 Pass out , EEE

Date of session : 29-June-2020

Profile of Speaker : Senior Software Engineer, Deloitte

Contact Number : 9176565044

Topic : Doing MBA

Gist of the Session: She spoke about

Her journey as a student, types of MBA courses, current trends in MBA education, among many other topics. Ms. Divya conveyed the need of holistic educational and professional development.

Her main emphasis was on suitability- allowing the students to take the decision of pursuing an MBA. Choosing quality over quantity, keeping the end goal in mind (job satisfaction, decent pay cheque, entrepreneurial responsibility and freedom, etc.), development of skills were some noteworthy issues discussed during the presentation.

Intellectual takeaways from the presentation include:

1. The necessity of online co-curricular courses (through which students can gain a competitive edge and add Feathers to their Caps),
2. Importance of work experience and networking,
3. Banking on ones' strengths, and
4. Stress on job satisfaction and personal relevance rather than adaptation of the compulsive 'Herd Mentality'
