

**Theme: Resilience, Innovation, Efficiency**

**An Initiative by the Ministry of Education, AICTE and MIC**

**Day 1 – Detailed Institutional Daily Report**

**Inaugural Session:**

The three-day workshop commenced with a formal inauguration emphasizing the strategic importance of Artificial Intelligence integration within core engineering disciplines, particularly Electrical and Mechanical Engineering.

**Address by Prof. C.V. Narasimhulu, Principal, CBIT**

Prof. Dr. Narsimulu inaugurated the program by highlighting AI as a transformational force reshaping engineering education and industrial practices. He emphasized that initiatives such as this workshop are essential for preparing core engineering students to remain relevant in rapidly evolving technology-driven industries. He acknowledged the importance of exposing students to real-world industry use cases rather than limiting learning to theoretical concepts.

**Address by Dr. Umakanta Choudhury , Prof. & Advisor(I&I), CBIT,**

**Ex , Executive Director, R&D and Corp. Technology Management, BHEL**

- Dr. Umakanta Chowdhary elaborated on the deep interconnection between **Electrical Engineering and Mechanical Engineering** in modern intelligent systems.

He explained how:

- Predictive maintenance is both an electrical systems challenge and a mechanical reliability challenge, requiring integrated analysis of signals, components, and operating conditions.
- Failure prediction in turbines, motors, power grids, transportation systems, and other stressed infrastructure highlights the strong interdependence between Electrical Engineering and Mechanical Engineering, necessitating a multidisciplinary project approach.
- Representative use cases include predictive maintenance and early warning systems for gas turbine systems, industrial automation setups, and critical rotating machinery.
- Autonomous vehicles rely equally on intelligent electrical/electronic systems (sensing, control, AI) and robust mechanical design and reliability.
- These technologies have strategic importance, particularly in defence and warfare applications, where system reliability, early fault detection, and mission readiness are critical.

Through examples of Mechanical Systems, automotive systems, and industrial machinery, he demonstrated how AI acts as the integrating intelligence layer across both domains, reinforcing the necessity for interdisciplinary AI competence, which will accelerate Innovation and efficiency

of the system.. He also requested the Resource persons for getting the EEE and Mechanical Students certified with AI.

He expressed his sincere appreciation to the **Ministry of Education (MoE)** and **AICTE–Innovation Cell (MIC)** for launching the timely and visionary initiative titled “**AI for Atmanirbhar Bharat: HEI Pre-Summit Engagements towards India AI Impact Summit 2026**” under the IndiaAI Impact Summit 2026. He also communicated that this MIC-driven initiative represents a significant step toward accelerating **AI awareness, adoption, and capacity building** across the higher education ecosystem, in strong alignment with the National vision of **Atmanirbhar Bharat**. He further highlighted that active engagement of Higher Education Institutions during the pre-summit phase will substantially strengthen **grassroots innovation, interdisciplinary collaboration, and industry-relevant and Strategic AI applications**.

### Address by **Dr. K. Krishna Veni** Vice – Principal, CBIT

Dr. Krishnaveni highlighted the long-term academic importance of the workshop and announced institutional commitment to sustaining learning momentum. She declared that:

- Students will mandatorily undertake **five additional AI-based projects** over the coming month
- GenAI Pioneer will provide number of **industry problem statements**

She further emphasized that all participants will receive certifications including IBM, Microsoft and other industry-recognized credentials, . **He also communicated about the Excellent Initiative by MoE, AICTE.**

### Address By **Dr Bheema Reddy, Manager, Indovation, AICTE**

This AI initiative, "**AI for Atmanirbhar Bharat,**" by MoE and AICTE serves as a critical foundational component within the broader framework of pre-summit engagements for the **IndiaAI Impact Summit 2026**. Its primary objective is to systematically **accelerate AI integration** across India's vast higher education landscape through a multi-pronged strategy:. The initiative is strategically designed to operationalize the national vision of **Atmanirbhar Bharat (Self-Reliant India)** by fostering a self-sustaining ecosystem of innovation. It aims to transform Higher Education Institutions (HEIs) into hubs where theoretical knowledge converges with practical, problem-solving applications. During this preparatory phase, the program ensures that the momentum built at the local and institutional levels culminates in a impactful, cohesive, and nationally aligned discourse at the flagship **IndiaAI Impact Summit in 2026**.

### Address by **Dr. G. Laxmaiah.HOD – Mechanical Engineering**

Dr. Laxmaiah expressed strong support for AI integration within core mechanical engineering. He spoke about:

- The growing relevance of AI in autonomous vehicles
- Intelligent manufacturing systems
- Predictive maintenance and digital twin technologies

He emphasized that AI is no longer confined to IT disciplines but has become central to mechanical engineering innovation.

## Address by Dr. M. Bala Subba Reddy, HOD – Electrical Engineering

Dr. Subba Reddy discussed the pervasive role of AI across electrical engineering, with special focus on:

- Electric vehicles as AI-driven systems
- Smart grids and intelligent energy management
- Power electronics integrated with AI control systems

He stressed that the future of electrical engineering is inherently intertwined with AI-based intelligence.

## Inaugural Address by Uma Desu, CAIO – GenAI Pioneer

Uma Desu delivered a strategic keynote outlining:

- The unprecedented rise of AI-driven engineering careers
- Highest salary packages reaching **₹2.5 crore in AI and robotics roles in 2025**
- The example of a 24-year-old professional securing a ₹2,195 crore valuation-based compensation opportunity
- GenAI Pioneer will be providing 50 Industry Use Cases. Students will learn the AI Tools to master them. Teams of 3-4 will be formed and each team shall pick one project. By Day2 evening, all teams will have completed their projects.
- On Day 3, the top 3 teams will receive certificates from GenAI Pioneer and prizes from Idealabs.

He presented the **Top 30 high-growth AI domains**, emphasizing those strongly connected to core engineering, including:

- Autonomous vehicles
- Mechatronics AI systems
- Robotics intelligence
- Smart manufacturing
- Energy AI systems

The keynote reinforced that core engineering combined with AI execution capability forms the foundation of future premium engineering careers.

## Morning Session: AI Transformation Across Electrical and Manufacturing Industries

Instructor: Uma Desu

### Industry Transformation Overview

The session began with a comprehensive overview of how AI is fundamentally transforming traditional industries, moving engineering roles from static system design to intelligent, predictive, and self-optimizing systems.

Participants were introduced to the **high-value career pathway**, where domain expertise combined with AI system execution leads to premium industry roles.

### AI in Electrical Engineering and Smart Energy Systems

Key applications discussed included:

- **Smart Grid Demand Forecasting and Predictive Load Planning** by Siemens Energy

- **Power Theft Detection using Anomaly Machine Learning** by Tata Power, generating savings of **\$2–5 million annually per utility**
- **Outage Prediction Systems** developed by Infosys Energy Practice

Equipment intelligence initiatives included:

- Thermal intelligence by TCS IoT
- Motor fault prediction by Bosch
- AI-based asset reliability systems by Infosys and industry partners

Emerging roles highlighted:

- Smart Grid AI Engineer
- Power Systems AI Architect
- Predictive Maintenance Specialist
- IoT + AI Systems Engineer

## AI in Manufacturing and Industrial Systems

Major transformations covered:

- Predictive maintenance platforms by Honeywell
- Production optimization by Accenture
- Vision-based quality inspection by Hyundai (100% component inspection in real time)
- Inventory intelligence using IBM Sterling AI

Impact metrics discussed:

- 40% downtime reduction
- 25% yield improvement
- 99.7% defect detection accuracy

## Advanced Engineering Intelligence

Students were exposed to:

- AI-driven material prediction and fatigue life modeling
- Structural risk analysis using ML
- Heat transfer optimization and HVAC intelligence by Honeywell
- Microsoft Research AI reducing data center cooling energy by 30%

## Robotics and Automation Intelligence

Key industry examples included:

- Amazon deploying over 520,000 mobile robots in fulfilment centres
- Vision-based pick-and-place robotic systems
- Robot health monitoring by Bosch
- Cycle time reduction by ABB Robotics

The robotics market projection of **\$210 billion by 2025** was presented, along with real student placement success stories including **₹18 LPA roles at ABB**.

## Afternoon Session: RPA and Intelligent Automation Systems (TPO Lab students with the Desktop Computer)

### Software Evolution Framework

Students were introduced to the evolution from:

- Hard-coded systems
- Cloud-based automation
- To intelligent agent-driven systems

Robotic Process Automation (RPA) was presented as a foundational Industry 4.0 skill enabling intelligent workflow orchestration.

RPA — the same automation backbone used by global giants like Siemens, Toyota, GE and Tata to run smart factories, power grids and supply chains.

This is a high-value, high-package engineering skill.

Usage per the Engineering Disciplines:

Manufacturing / Industrial:

- Siemens – procurement, plant reporting
- Bosch – supplier onboarding, quality data
- Toyota – production planning, invoicing
- Ford – supply chain scheduling
- BMW – quality & logistics automation
- GE – maintenance workflows
- Thermo Fisher – invoice processing
- Arçelik – customs & purchase workflows
- Tata Manufacturing – inventory & vendor payments
- Unilever – demand planning
- P&G – materials management
- Honeywell – service scheduling
- Caterpillar – parts logistics
- Schneider Electric – order processing

Electrical / Energy / Utilities:

- Siemens Energy – grid ops reporting
- GE Power – maintenance scheduling
- Schneider Electric – asset automation
- Tata Power – billing, meter-to-cash
- National Grid – outage & compliance
- Duke Energy – customer ops
- Enel – grid data processing
- EDF Energy – regulatory reporting

### Smart Campus Notification System – Live Industry Use Case

A complete real-world automation workflow was executed using **n8n**, demonstrating zero-code intelligent systems:

Workflow included:

1. Gmail email extraction
2. Selection of critical emails
3. Gemini LLM API for summarization, classification, urgency detection
4. Automated report generation in Google Sheets
5. WhatsApp alerts via Twilio integration

This demonstrated how modern industries connect multiple platforms into intelligent automated systems without traditional programming.

Companies such as **Infosys, Wipro, ServiceNow and IBM** were cited as real-world adopters of similar RPA workflows across manufacturing, education, and enterprise operations.

### AI-Powered Website Automation

Students were introduced to AI-driven digital transformation:

- Automated website cloning tools
- Manual GenAI-based development using screenshot-to-code conversion
- ChatGPT generating HTML and CSS
- Real-time testing using CodePen

This illustrated how AI is radically accelerating digital engineering workflows.

### Alignment with AICTE and MoE Objectives:

#### Resilience

- Predictive maintenance systems preventing failures
- Smart grid outage forecasting
- Automated operational workflows reducing human dependency
- Intelligent robotics reliability monitoring

#### Innovation

- AI-driven smart grids and energy intelligence
- Vision AI quality systems
- Robotics intelligence
- GenAI-powered automation workflows
- Intelligent website generation

#### Efficiency

- 40% downtime reduction in manufacturing
- 30% energy optimization in cooling systems
- Automated enterprise workflows eliminating manual processing
- Real-time AI decision-making systems

### Key Outcomes of Day 1

By the end of Day 1, participants achieved:

#### Technical Competencies

- Understanding AI transformation across core engineering domains
- Exposure to real industrial AI systems
- Hands-on experience with RPA and intelligent automation
- Practical GenAI application development

#### Career Readiness

- Clear mapping of high-value engineering roles

- Understanding of skill stacks required for premium careers
- Awareness of real industry project execution expectations

### Innovation Capacity

- Ability to conceptualize AI-driven systems
- Execution of automated workflows
- Development of AI-assisted engineering solutions

### Conclusion of Day 1

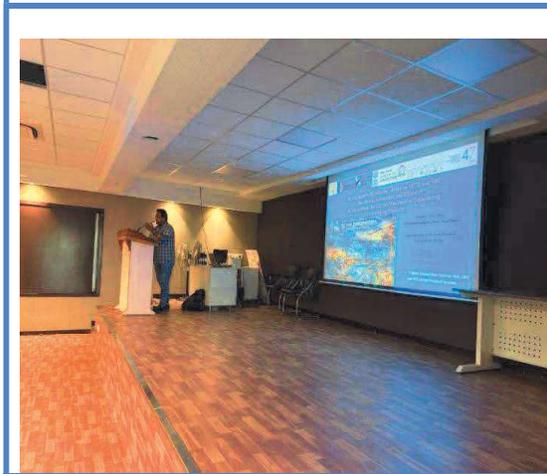

The first day successfully established the foundation for AI-driven core engineering transformation, combining:

- Strategic industry insight
- Real-world case studies
- Hands-on intelligent automation
- Career pathway clarity

The sessions reinforced that **AI is no longer an auxiliary tool but the central intelligence layer of modern engineering systems**, directly aligned with AICTE's vision of resilience, innovation, and efficiency in higher education. 170 Plus students Participated on eth first day. Day 2 and 3 planned with both Theory and Application together in TPO Lab of Placement Budling.

(Dr Umakanta Chouhury)  
Prof. & Advisor(I&I), CBIT  
Ex, ED, R&D and CTM BHEL

Attendance sheets

**IIC 8.0 Activity AI Initiative driven by AICTE and MIC  
Resilience, Innovation and Efficiency  
AI Applications for EEE and Mechanical Engineering  
Emerging Products**

**3-Day Workshop on  
AI FOR ENGINEERS  
For Electrical & Mechanical Students**

**DAY 1**  
AI-Powered Design & Automation

**DAY 2**  
Smart Robotics & Industrial Copilot

**DAY 3**  
Digital Twins & Predictive Maintenance

**HANDS-ON SESSIONS - LIVE DEMOS - CAREER INSIGHTS**

Speaker: Uma Desu,  
Chief Artificial Intelligence Officer , GenAI Pioneer

Program Convener: Dr Umakanta Choudhury,  
Prof. & Advisor(I&I), CBIT

Date: 27-1-26 to 29-1-26 ( 3 days)

Tim: 9:45 am onwards

Venue: D Block Ground Floor Seminar Hall, CBIT  
And TPO Lab for Practical Sessions.

## Three-Day Workshop on “AI for Engineers – Electrical & Mechanical Engineering”

Program Convener: Dr Umakanta Choudhury, Prof. & Advisor(I&I), CBIT

Instructor: Uma Desu, Chief Artificial Intelligence Officer , GenAI Pioneer

### Day 2 – Detailed Institutional Daily Report ( 28-1-26)

Theme: Industrial AI Foundations, Core AI Technologies, Prompt Engineering & Industry Certifications

#### Morning Session – Industrial AI, Agentic Systems & Future Skills

The morning session focused on building a strong understanding of **Industrial AI** and its **real-world deployment in utilities and manufacturing sectors**.

##### ◆ 1. AI in Utilities and Manufacturing – Real Industry Applications

Participants were exposed to:

- AI-driven predictive maintenance in power systems
- Smart grid optimization and demand forecasting
- Manufacturing automation and quality control
- Energy efficiency systems

The emphasis remained on **working industrial AI systems**, not theoretical models.

##### ◆ 2. Emergence of Agentic AI in Industry

The concept of Agentic AI was introduced as:

Day-2 of the AI Workshop-28-1-26

- Autonomous AI systems capable of observing, deciding, and acting
- Used in operations optimization, maintenance planning, and intelligent workflows

This helped participants understand the transition from **AI tools to autonomous industrial intelligence**.

---

### ◆ 3. Global Industry Vision – NVIDIA & Microsoft

Two strategic perspectives were discussed:

#### ◆ NVIDIA:

- AI-driven digital twins
- Robotics and intelligent factories
- Simulation-led industrial design

#### ◆ Microsoft (Satya Nadella):

- AI as a universal platform shift
  - Copilot-driven productivity
  - Human-AI collaboration as the future of work
- 

### ◆ 4. Defining Industrial AI & Core Focus Areas

Industrial AI was formally defined and mapped to:

- Utilities and energy systems
  - Manufacturing automation
  - Robotics and autonomous machines
  - Digital twins
  - Predictive intelligence
- 

### ◆ 5. Industry 4.0 vs Industry 5.0 Skills

Clear differentiation was made:

**Industry 4.0:** Automation, IoT, analytics, robotics, AI-assisted systems

**Industry 5.0:** Human-AI collaboration, autonomous agents, cognitive systems, ethical AI, creativity + intelligence

#### Professional Certifications Completed

##### ✓ Databricks Certification – Completed live

Guidance given to complete Microsoft Certification at home.

---

### Afternoon Session – Core AI Technologies, Prompt Engineering & Certifications

The afternoon transitioned from industry vision into **hands-on foundational AI technologies and professional skill development**.

---

### 1. Natural Language Processing (NLP) Foundations

Students were introduced to real NLP pipelines including:

- Tokenization – breaking text into meaningful units
- Sentence splitting techniques – structuring documents
- Vectorization – converting text into numerical embeddings

- Document search using vector databases
- Parsing and searching across: PDFs, Audio Files, MP4 files

This demonstrated how **modern AI searches knowledge beyond plain text.**

## 2. Machine Learning Fundamentals (Conceptual)

Using simple analogies, the following were explained:

- Supervised learning – learning from labeled examples
- Unsupervised learning – pattern discovery
- Reinforcement learning – learning through rewards

This built the conceptual bridge between **data and intelligent decision systems.**

---

## 3. Prompt Engineering – Core Industry Skill

### Prompt Structure Formula Introduced:

**Role + Goal + Context + AVE (Audience, Variables, Examples)**

### Prompt Rules Covered:

- Token sequence length
- Clarity of role and target
- Context building
- Use of examples
- Output format control

Each element was explained in detail.

---

### Prompt Engineering as a Career Path

Real industry demand was shown including:

- Example of ₹16 LPA Prompt Engineering role
  - Growing enterprise usage of structured prompting
  - Prompt engineering as a high-value Industry 5.0 skill
- 

### Core Prompt Engineering Techniques Introduced:

- Ensured Zero / Few-Shot prompting
- Knowledge Generation Prompting
- Chain of Thought Prompting
- Tree of Thought Prompting
- Audience Persona Pattern

Initially shown with generic examples, followed by **industry-oriented scenarios** to demonstrate real impact.

Students were encouraged to self-explore why structured prompting dramatically improves AI outcomes.

Here's an expanded, report-ready section you can plug directly into your Day-2 summary.

---

### Expanded Focus: Prompt Engineering as Brain-Mapping & Cognitive Engineering

A major highlight of the afternoon session was demonstrating that **Prompt Engineering is essentially structured human thinking mapped into AI instructions**, not random question-asking.

Students were guided to understand that every advanced prompting technique mirrors how expert engineers naturally solve problems.

◆ **Prompt Engineering = Converting Human Intelligence into Machine Intelligence**

It was clearly shown that:

- The human brain does not solve problems in one sentence
- It breaks problems into steps, context, examples, alternatives, and reasoning paths
- Prompt engineering simply **externalizes this thinking process for AI**

In essence:

Prompt Engineering is the engineering of human cognition into AI workflows.

---

✿ **Brain-Mapping of Core Prompt Engineering Techniques**

Each technique was mapped directly to natural human thinking patterns:

---

🧠 **Ensured Zero / Few-Shot Prompting → Learning by Observation**

Equivalent to:

- How humans learn from examples first
- How students understand after seeing solved problems

AI is taught exactly the same way.

---

🔍 **Chain of Thought Prompting → Step-by-Step Logical Reasoning**

Equivalent to:

- Engineering problem solving
- Breaking systems into cause-effect relationships

AI is instructed to reason like a human engineer.

---

🌳 **Tree of Thought Prompting → Exploring Multiple Solution Paths**

Equivalent to:

- Comparing alternatives before deciding
- System design trade-offs

AI behaves like a design engineer evaluating options.

---

📄 **Knowledge Generation Prompting → Structured Knowledge Creation**

Equivalent to:

- Writing manuals
- Creating SOPs
- Building documentation

AI becomes a knowledge engineer.

---

👤 **Audience Persona Pattern → Contextual Intelligence**

Equivalent to:

- Explaining the same concept differently to a professor, manager, or technician

AI adapts output based on human cognitive framing.

---

### **Why This Makes Prompt Engineering a High-Value Skill**

Students were clearly shown that:

- ✓ It multiplies AI accuracy
- ✓ It converts AI into an engineering partner
- ✓ It mirrors how experts think
- ✓ It is critical for industrial AI systems

This is why companies pay ₹15L–₹40L+ for prompt engineering & AI interaction roles.

### **Industry 5.0 Connection**

Prompt engineering was positioned as:

- The interface between human intelligence and autonomous AI
- A core Industry 5.0 collaboration skill
- A form of cognitive system design

Where:

Humans provide structured reasoning  
AI provides speed, scale, and execution

---

### **Learning Outcome from Prompt Engineering Module**

By the end of this segment, students understood:

- Prompting is structured thinking
  - Good prompts = good engineering design
  - AI performance depends on cognitive clarity
  - Prompt engineering is transferable across all domains
- 

### **4. IBM Prompt Engineering Certification – Completed live (IBM servers)**

Students were also guided for:

- Microsoft AI Certification (home completion)
- Forage (GEORUS) Industry Certification

 **Total: 4 certifications initiated/completed in one day**

---

### **5. Introduction to Autonomous Systems & Industry Exposure**

Students were introduced to:

- Basics of autonomous vehicles
- Role of AI in perception and decision making
- Emerging internships in autonomous systems
- Real global industry opportunities

Basic definition of **electric vehicles (EVs)** was also introduced as preparation for the next day's deep dive.

---

### **Upcoming Skill Coverage Previewed**

For Day 3:

Day-2 of the AI Workshop-28-1-26

- ✓ Electric Vehicles in detail
- ✓ Computer Vision fundamentals
- ✓ Chatbot systems

### Mapping Day-2 Outcomes to AICTE Core Goals

---

#### AICTE Goal 1 – RESILIENCE

Built through:

- AI-driven predictive maintenance
- Smart grid optimization
- Autonomous systems
- NLP-based intelligent search
- Machine learning adaptability

 Students learned how AI prevents failures and improves system reliability.

---

#### AICTE Goal 2 – INNOVATION

Built through:

- Agentic AI systems
- Prompt engineering as a new AI interface
- Autonomous vehicles & robotics
- Vector AI and multimodal search
- Human-AI collaboration models

 Students were exposed to next-generation AI engineering thinking.

---

#### AICTE Goal 3 – EFFICIENCY

Built through:

- Industrial automation
- Intelligent decision support
- Fast knowledge retrieval
- Optimized operations
- AI-powered workflows

 Clear demonstration of how AI reduces cost, time, and operational waste.

---

#### Key Measurable Outcomes of Day 2

- ✓ Industrial AI understanding in utilities & manufacturing
- ✓ Core AI technology foundations (NLP, ML, AI search)
- ✓ Prompt engineering as a professional skill
- ✓ 2 certifications completed live + 2 in progress
- ✓ Exposure to autonomous systems & global internships
- ✓ Clear alignment with AICTE resilience, innovation, and efficiency

Dr U.K.Choudhury  
Prof. & Advisor(I&I), CBIT

### **Day 3 Learning Impact**

- ✓ System-level AI engineering mastery
- ✓ Autonomous intelligence understanding
- ✓ Real-world project deployment experience
- ✓ Engineering problem solving maturity

#### **AICTE OBJECTIVE ALIGNMENT — DETAILED MAPPING**

##### **RESILIENCE**

Achieved through:

- Predictive asset maintenance
- Fault intelligence systems
- Smart grid forecasting
- Risk-aware autonomous machines
- Continuous monitoring agents

##### **INNOVATION**

Enabled through:

- Agentic AI architectures
- Autonomous system design
- Cognitive workflow engineering
- Vision-based quality systems
- Multimodal AI pipelines

##### **EFFICIENCY**

Delivered by:

- Automated workflows
- Predictive optimization
- Energy management systems
- Intelligent decision engines

#### **MEASURABLE IMPACT & KPIS (ANALYTICAL)**

#### **INSTITUTIONAL & STUDENT TRANSFORMATION IMPACT**

##### **Academic Advancement**

- AI embedded into core engineering disciplines
- Enhanced problem-solving approach
- Interdisciplinary engineering exposure

### Employability Readiness

- Industry-aligned skills
- Certification credentials
- Portfolio of real AI systems

### Innovation Culture

- Project-driven learning
- Autonomous solution development
- Continuous experimentation mindset

### FUTURE ROADMAP

CBIT aims to:

- Establish AI-driven engineering labs
- Integrate AI across curriculum
- Partner with industry AI platforms
- Launch student innovation incubators
- Conduct advanced AICTE-aligned programs

### AICTE OUTCOME MAPPING MATRIX (FORMAL COMPLIANCE)

AICTE IIC Objective	Workshop Implementation	Measurable Outcome
Resilience	Predictive maintenance, smart grid AI	Failure reduction systems
Innovation	Autonomous AI, agentic systems	New solution prototypes
Efficiency	Automation workflows	Process optimization
Skill Development	Certifications, projects	Industry readiness
Entrepreneurship	System design thinking	Innovation mindset

### STUDENT SKILL PROGRESSION MODEL

- Predictive AI system builders
- Autonomous intelligence designers
- Workflow automation engineers
- Industry-aligned problem solvers

### ❖ ENHANCED FINAL IMPACT STATEMENT

**This AICTE IIC 8.0 workshop established a new benchmark for core engineering education by embedding Artificial Intelligence as the foundational intelligence layer across infrastructure, manufacturing, automation, and autonomous systems.**

**The program delivered:**

- ✓ Resilient engineering solutions
- ✓ Innovation-driven system design
- ✓ Efficiency-focused digital transformation
- ✓ Industry-ready graduates

**Positioning CBIT as a leader in AI-integrated core engineering education.**

#### ❏ FINAL IMPACT STATEMENT

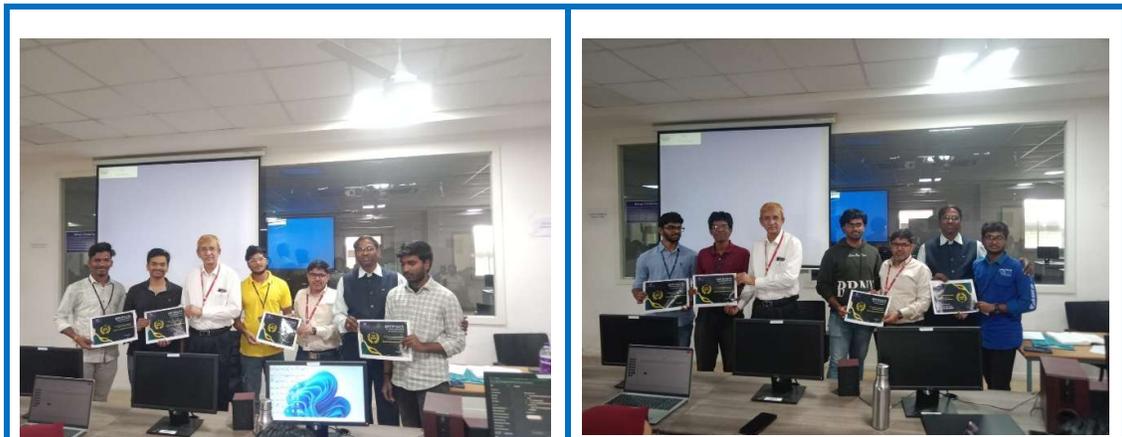

This AICTE IIC 8.0 workshop established a new benchmark for core engineering education by embedding Artificial Intelligence as the foundational intelligence layer across infrastructure, manufacturing, automation, and autonomous systems.

The program delivered:

- ✓ Resilient engineering solutions
- ✓ Innovation-driven system design
- ✓ Efficiency-focused digital transformation
- ✓ Industry-ready graduates

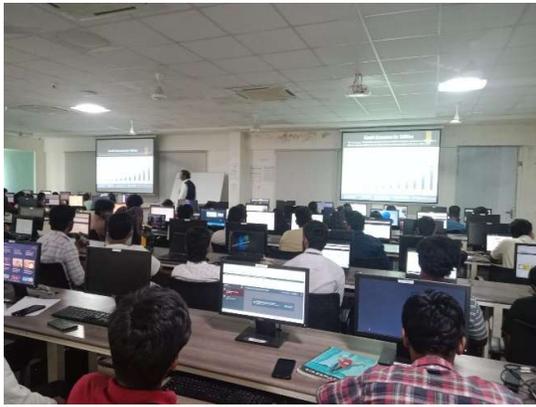

Positioning CBIT to provide AI-integrated core engineering education and implementing the AI initiative of AICTE and the Ministry of Education Innovation Cell.

### **Event Last day (3<sup>rd</sup>) Day Photographs**

Sample Certificate Distribution for the top performing Students.
