**CHAITANYA BHARATHI INSTITUTE OF TECHNOLOGY**

(Autonomous Institution under UGC, Affiliated to Osmania University)

Department of Electronics & Communication Engineering

Accredited by NBA and NAAC-UGC,

Chaitanya Bharathi (Post), Gandipet, Hyderabad-500075

## **CHAITANYA BHARATHI INSTITUTE OF TECHNOLOGY (A)**

***OUR MOTTO: SWAYAM TEJASWIN BHAVA***

### **VISION and MISSION of the INSTITUTE**

#### **Vision**

To be a centre of excellence in technical education and research.

#### **Mission**

To address the emerging needs through quality technical education and advanced research.

### **VISION and MISSION of the DEPT. of ECE**

#### **Vision**

To emerge as a vibrant model of excellence in education, research and innovation in Electronics and Communication Engineering.

#### **Mission**

- M1: To impart strong theoretical and practical knowledge of the state of art technologies to meet growing challenges in the industry.
- M2: To carry out the advanced and need based research in consultation with the renowned research and industrial organizations.
- M3: To create entrepreneurship environment including innovation, incubation and encourage to patent the work.

## **DEPARTMENT OF ELECTRONICS & COMMUNICATION ENGINEERING**

### **Program Educational Objectives of M.E (Communication Engineering) Program**

- PEO1 Graduates will Design & Develop Communication Systems either independently or in a group.
- PEO2 Graduates will able to learn and adopt the emerging technologies in the area of Communication Engineering.
- PEO3 Graduates will demonstrate the ability to do research and become a lifelong learner.
- PEO4 Graduates will Develop rational approach to solve real world problems with Self-confidence and ethical & Societal Responsibilities.

### **Program Outcomes of M.E (Communication Engineering) Program**

- PO1 An ability to independently carry out research / investigation and development work to solve practical problems.
- PO2 An ability to write and present a substantial technical report/document.
- PO3 Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.
- PO4 Students will be able to use modern engineering tools/software to design and develop advanced communication systems.
- PO5 Students will be able to develop self-confidence, team work, skills for lifelong learning and committed to social responsibilities.

**Prerequisite:** Students should have in depth knowledge of Computer Networks.

**Course Objectives:**

This course aims to:

1. Familiarize the student with the basic taxonomy and terminology of the computer networking area.
2. Provide the student with knowledge of advanced networking concepts and techniques.
3. Provide the student with knowledge of Real Time Communications over Internet and Packet Scheduling.

**Course Outcomes:**

Upon completion of this course, students will be able to:

1. Recall the concepts and Issues of Real Time Communications over Internet.
2. Classify protocols and algorithms for Communication Networks.
3. Identify the mechanisms for Quality of Service in networking.
4. Analyze IP addressing challenges and services in Internet
5. Explain the different versions of IP Protocols, IP switching and MPLS Protocols.

**UNIT-I**

**Overview of Internet Concepts, Challenges and History:** Overview of -ATM. TCP/IP Congestion and Flow Control in Internet; Throughput analysis of TCP congestion control, TCP for high bandwidth delay networks and Fairness issues in TCP.

**UNIT-II**

**Issues of Real Time Communications over Internet:** Adaptive applications, Latency and throughput, Integrated Services Model (IntServ), Resource reservation Protocol. Characterization of Traffic by Linearly Bounded Arrival Processes (LBAP), Leaky bucket algorithm and its properties.

**UNIT-III**

**Packet Scheduling Algorithms-Requirements and Choices:** Scheduling guaranteed service Connections, GPS, WFQ and Rate proportional algorithms, High speed scheduler design; Theory of Latency Rate servers and delay bounds in packet switched networks for LBAP traffic; Active Queue Management - RED, WRED and Virtual clock, Control theoretic analysis of active queue management.

**UNIT-IV**

**IP Address Lookup-Challenges:** Packet classification algorithms and Flow Identification, Grid of Tries, Cross producting and controlled prefix expansion algorithm. Admission control in Internet: Concept of Effective bandwidth, Measurement based admission control; Differentiated Services in Internet (DiffServ), DiffServ architecture and framework.

**UNIT-V**

IPv4, IPv6, IP tunneling, IP switching and MPLS, Overview of IP over ATM and its Evolution to IP switching; MPLS architecture and framework, MPLS Protocols, Traffic Engineering issues in MPLS.

**Prerequisite:** The knowledge of DSP is required.

**Course Objectives:**

This course aims to:

1. Analyze digital IIR and FIR filters for the given specifications.
2. Understand the basic concepts of Multi-rate digital signal processing.
3. Learn the various parametric and non-parametric spectral estimation methods.

**Course Outcomes:**

Upon completion of this course, students will be able to:

1. Design digital filters for the given specifications.
2. Interpret the concepts of Multi-rate digital signal processing.
3. Understand the concepts of linear prediction filters.
4. Analyze various Power Spectral Estimation methods for random signals

**UNIT-I**

**Review of Digital Filters:** FFT Algorithms, review of digital filter design and structures-Basic FIR/IIR filter design & structures, design techniques of linear phase FIR filters, IIR filters by impulse invariance, bilinear transformation, Cascaded, lattice structures and parallel realization of FIR and IIR filters.

**UNIT-II**

**Multirate DSP:** Introduction, Decimator and Interpolator, Sampling rate conversion, multistage decimator and interpolator, polyphase filters, Uniform digital filter banks, two channel Quadrature Mirror Filter bank- perfect reconstruction conditions.

**UNIT-III**

**Linear Prediction & Optimum Linear Filters:** Introduction to discrete random signals, Power Density spectrum, Ergodic process. Forward-backward linear prediction filters, solution of normal equations, AR Lattice and ARMA Lattice-Ladder Filters, FIR and IIR Wiener filters.

**UNIT-IV**

**Power Spectrum Estimation:** Estimation of Spectra from Finite-Duration Observations of Signals, Nonparametric Methods for Power Spectrum Estimation-Bartlett and Welch methods. Parametric methods for Power Spectrum Estimation-Yule Walker method and Burg method. Minimum-Variance Spectral Estimation, Eigen analysis Algorithms for Spectrum Estimation, Pisarenko method and MUSIC algorithm.

**UNIT-V**

**Applications of Digital Signal Processing:** Dual-Tone Multi frequency Signal Detection, Spectral analysis of sinusoidal signals, Non-stationary signals and Random signals, sub band coding of speech signals, JPEG-2000, Trans multiplexers, Introduction to wavelets.

This course aims to:

1. The basic principles of an antenna and its parameters for characterizing its performance.
2. The fundamental concepts of various types of antennas, arrays for customizing the pattern parameters.
3. The concept of aperture and microstrip antennas.

**Course Outcomes:**

Upon completion of this course, students will be able to:

1. Understand the radiation parameters of an antenna.
2. Apply the concept of current distribution to analyze the antennas.
3. Analyze the linear arrays for uniform distribution.
4. Appraise the characteristics of broad side, end fire arrays and non-uniform arrays.
5. Learn the aperture antennas using Huygen's principle, image theory and Microstrip antennas.

**20EC C104****WIRELESS AND MOBILE COMMUNICATION**

Instruction	3 L Hours per Week
Duration of SEE	3 Hours
SEE	60 Marks
CIE	40 Marks
Credits	3

**Prerequisite:** Requires concepts of Electromagnetic theory, Antennas and Wave propagation and Digital Communication.

**Course Objectives:**

This course aims to:

1. Facilitate the understanding of the basics of Cellular System design Fundamentals and Large-scale propagation models
2. Provide the concepts of small-scale fading and Equalization.
3. Build knowledge on multiple access techniques, GSM and Cellular Standards.

**Course Outcomes:**

Upon completion of this course, students will be able to:

1. Understand and apply frequency-reuse concept in mobile communications, and to analyze its effects on interference, system capacity, handoff techniques.
2. Analyze path loss and interference for wireless telephony and their influences on a mobile-communication system's performance.
3. Distinguish various multiple-access techniques for mobile communications and their advantages and disadvantages.
4. Evaluate GSM and CDMA systems by functioning with knowledge of forward and reverse channel details, advantages and disadvantages of using these technologies.
5. Devising the higher generation Cellular standards 3G, 4G & 5G.

**UNIT-I**

**The Cellular Concept System Design Fundamentals:** Frequency reuse, Frequency management, Channel Assignment Strategies, Handoff Strategies, Co-channel Interference, Adjacent channel interference, Power control for Reducing Interference, Cell Splitting and Sectoring.

**UNIT-II**

**Mobile Radio Propagation Large Scale Path Loss:** Free space propagation model, Reflection, Ground Reflection (Two-Ray) model, Diffraction: Knife – edge Diffraction Model, Scattering, Practical link budget design using path loss models: Log Normal Shadowing, Determination of percentage of coverage area, Outdoor propagation models: Okumura and Hata models, Indoor propagation models: Partition losses (same floor), Partition losses between floors, Signal penetration into buildings.

**UNIT-III**

**Mobile Radio Propagation Small Scale Fading and Multipath:** Impulse response model, Spread Spectrum Sliding Correlator Channel Sounding, Parameters of Mobile Multipath Channels, Types of Small-Scale Fading: Flat Fading, Frequency selective Fading, Fast Fading and Slow Fading.

#### UNIT-IV

**Equalization:** Fundamentals of Equalization, Training a Generic Adaptive Equalizer, Equalizers in Communication Receiver, Linear Equalizers, Non-Linear Equalizers: Decision Feedback Equalization (DFE), Maximum Likelihood Sequence Estimation (MLSE) Equalizer, Algorithms for Adaptive Equalization: Zero Forcing Algorithm and Least Mean Square Algorithm.

#### UNIT-V

**Multiple Access Techniques:** FDMA, TDMA and CDMA. Comparison of these technologies based on their signal separation, Advantages and Disadvantages.

**GSM System:** Architecture and Interfaces, Subsystems, Logical channels, HSCSD, GPRS and EDGE.

**IS-95 System:** Architecture, Air interface, Physical and Logical channels, Evolution of CDMA One to CDMA 2000.

**Higher Generation Cellular Standards:** 3G, 4G, VoLTE, UMTS, Introduction to 5G.

## ADVANCED COMMUNICATION NETWORKS LAB

Instruction	4 P Hours per Week
Duration of SEE	--
SEE	--
CIE	50 Marks
Credits	2

**Prerequisite:** Students should have in depth knowledge of Computer Networks.

### Course Objectives:

This course aims to:

1. Provide the student with knowledge sub-netting and routing mechanisms.
2. Provide the student with knowledge of basic routing protocols for Network design and implementation.
3. Provide the student with knowledge configuring User Datagram Protocol.

### Course Outcomes:

Upon completion of this course, students will be able to:

1. Identify the different types of network devices and their functions within a network.
2. Understand and build the skills of sub-netting and routing mechanisms.
3. Understand basic protocols of computer networks, and how they can be used to assist in Network design and implementation.
4. Configure a network using Linux and a mail server for IMAP/POP protocols.
5. Design and configure UDP Client Server.

### List of Assignments:

1. Study of Networking Commands (Ping, Tracert, TELNET, nslookup, netstat, ARP, RARP) and Network Configuration Files.
2. Linux Network Configuration.
  - a. Configuring NIC's IP Address.
  - b. Determining IP Address and MAC Address using if-config command.
  - c. Changing IP Address using if-config.
  - d. Static IP Address and Configuration by Editing.
  - e. Determining IP Address using DHCP.
  - f. Configuring Hostname in /etc/hosts file.
3. Design TCP iterative Client and Server application to reverse the given input sentence.
4. Design a TCP concurrent Server to convert a given text into upper case using multiplexing system call "select".
5. Design UDP Client Server to transfer a file.
6. Configure a DHCP Server to serve contiguous IP addresses to a pool of four IP devices with a default gateway and a default DNS address. Integrate the DHCP server with a BOOTP demon to automatically serve Windows and Linux OS Binaries based on client MAC address.
7. Configure DNS: Make a caching DNS client, and a DNS Proxy; implement reverse DNS and forward DNS, using TCP dump/Wire shark characterize traffic when the DNS server is up and when it is down.
8. Configure a mail server for IMAP/POP protocols and write a simple SMTP client in C/C++/Java client to send and receive mails.

9. Configure FTP Server on a Linux/Windows machine using an FTP client/SFTP client Characterize file transfer rate for a cluster of small files 100k each and a video file of 700mb. Use a TFTP client and repeat the experiment.
10. Signaling and QoS of labeled paths using RSVP in MPLS.
11. Find shortest paths through provider network for RSVP and BGP.
12. Understand configuration, forwarding tables, and debugging of MPLS.

**Suggested Reading:**

**Prerequisite:** The knowledge of signal processing algorithms and MATLAB are required.

**Course Objectives:**

This course aims to:

1. Simulation of FFT, Multirate concepts using MATLAB.
2. Spectral analysis of noisy signals using MATLAB.
3. Implementation of digital filters using MATLAB.

**Course Outcomes:**

Upon completion of this course, students will be able to:

1. Implement FFT algorithms for linear filtering and correlation using MATLAB.
2. Design and realize of the digital filters using MATLAB.
3. Experiment with multirate techniques using MATLAB.
4. Perform parametric and non-parametric estimation of PSD using MATLAB.
5. Design and Implement the adaptive filters using MATLAB.

<b>CO 5</b>	1	3	1	2	1

**List of Experiments:**

1. FFT of input sequence and comparison with DFT.
2. Design of IIR Butterworth, Chebyshev type-I & II, Elliptic LPF, HPF, BPF &BSF and calculate Group delay.
3. Design of FIR LPF, HPF, BPF &BSF using windows. Multiband FIR filter and calculate Group delay.
4. State space matrix representation from difference equation
5. Solution of normal equation using Levinson Durbin
6. Decimation and Interpolation using rational factors
7. Design a Multistage decimator multirate filter
8. Maximally decimated analysis DFT filter bank
9. Cascade and parallel realization of digital IIR filter
10. Convolution and M fold Decimation.
11. Parametric Estimation of PSD
12. Nonparametric Estimation of PSD
13. Design of Adaptive filter using LMS algorithm.

**Sample Mini Projects:**

1. Design the best IIR band pass filter to meet the given specifications:  
Pass band cut off frequencies: [500 600] Hz  
Stop band cut off frequencies: [525 675] Hz  
Pass band ripple:  $\leq 2\text{dB}$   
  
Stop band attenuation:  $\geq 60\text{dB}$   
Phase response: Approximately linear in pass band Consider Butterworth, Chebyshev, Elliptic and Bessel filters
2. Design a three stage multirate filter to meet the given specifications:  
Pass band cut off frequency: 450 Hz  
Stop band cut off frequency: 500 Hz  
Pass band ripple:  $\leq 3\text{dB}$   
Stop band attenuation:  $\geq 40\text{dB}$   
Sampling frequency: 40 KHz  
Compare with single stage filter.
3. Consider a clean speech signal of length 5000 samples and compute the Power Spectrum. Now add 0dB random noise. Compute the power spectrum using Welch and Eigen value Estimation method and also compare with the original spectrum.
4. Design a speech signal compression using octave filter banks and also calculate the compression ratio.

**Prerequisite:** The knowledge of antennas is essential.

**Course Objectives:**

This course aims to:

1. Understand the characteristics and radiation pattern of Infinitesimal antenna.
2. Simulate various antennas.
3. Study the effect of change in different parameters on antenna arrays.

**Course Outcomes:**

Upon completion of this course, students will be able to:

1. Determine specifications, design, construct and test antenna.
2. Explore and use tools for designing, analyzing and testing antennas.
3. Apply the concept of current distribution to find the field patterns.
4. Estimate the effect of the height of the monopole antenna on the radiation characteristics.
5. Study the effect of the variation of phase difference 'beta' between the elements of the array and case studies.

**Prerequisite:** Requires concepts of Electromagnetic theory, Antennas & Wave propagation and Digital Communication.

### Course Objectives:

This course aims to:

1. Facilitate the experimental setup for understanding the Cellular concepts and experiments using GSM and CDMA.
2. Provide the facility to learn AT commands in 3G networks and DSSS technique for CDMA to observe various spread spectrum parameters.
3. Build knowledge on concepts of software radio by studying building blocks such as Baseband and RF section.

### Course Outcomes:

Upon completion of this course, students will be able to:

1. Appraising Cellular concepts, GSM and CDMA networks.
2. Experimenting with GSM handset and fault insertion techniques.
3. Illustrate 3G communication system by means of various AT commands usage in GSM.
4. Testing on DSSS kit for implementing CDMA concept.

1. Study of DSSS technique for CDMA to observe effect of PN codes, Chip rate, Spreading factor and Processing gain.
2. Study of GSM handset for various signaling and Fault insertion techniques (Major GSM handset sections: clock, SIM card, charging, LCD module, Keyboard, User interface).
3. Study Transmitter and Receiver sections in Mobile Handset and also measure GMSK modulated signal.
4. Study various GSM AT Commands such as SMS and HTTP.
5. Study File system by AT commands in 3G network.
6. Establishing Call Setup, Estimation of Coverage area and Capacity in GSM and CDMA.
7. Develop concepts of Software radio by studying building blocks such as Baseband and RF section.
8. Develop Convolutional Encoder, Interleaver and De-Interleaver in Software Radio.
9. Study and analyze different modulation techniques in time and frequency domains using SDR Kit.
10. Estimation of GPS satellite position using RINEX data.
11. Estimation of key performance parameters of IRNSS L5 and S1 band signals.
12. Estimation of user position using GNSS Single Frequency receiver.

**20EC C109****MINI PROJECT WITH SEMINAR**

Instruction	4 P Hours per Week
Duration of SEE	--
SEE	--
CIE	50 Marks
Credits	2

**Prerequisite:** Knowledge of preparing slides by using power point presentations, Capable of searching for suitable literature and Presentation skills.

**Course Objectives:**

This course aims to:

1. The mini-project shall contain a clear statement of the research objectives, background of work, literature review, techniques used, prospective deliverables, and detailed discussion on results, conclusions and references.
2. To expose and practice of searching and referring the required literature.
3. This is expected to provide a good initiation for the student(s) towards R&D.

**Course Outcomes:**

Upon completion of this course, students will be able to:

1. Familiarize in searching the suitable literature in the chosen field.
2. Develop skills to understand and summarize the contents from the literature.
3. Ability to synthesize knowledge/ skills previously gained and applied in execution of a chosen technical problem.
4. Enhance oral presentation skills through power point presentations.
5. Learn and present the findings of their technical solution in a written report.

**Guidelines:**

1. As part of the curriculum in the II - Semester of the Program each student shall do a mini project, generally comprising about three to four weeks of prior reading, twelve weeks of active research, and finally a presentation of their work for assessment.
2. Each student will be allotted to a faculty supervisor for mentoring.
3. Mini projects should present students with an accessible challenge on which to demonstrate competence in research techniques, plus the opportunity to contribute something more original.
4. Mini projects shall have inter-disciplinary/ industry relevance.
5. The students can select a mathematical modeling based/Experimental investigations or Numerical modeling.
6. All the investigations are clearly stated and documented with the reasons/explanations.
7. The mini-project shall contain a clear statement of the research objectives, background of work, literature review, techniques used, prospective deliverables, detailed discussion on results, conclusions and references.

**Course Objectives:**

This course aims to:

1. The Dissertation Phase-I (Project work) will preferably be a problem with research potential and should involve scientific research, design, generation/collection and analysis of data, determining solution and must preferably bring out the student contribution(s).
2. To expose and learn the required simulation software/experimental techniques.
3. To carry out the work in a research environment or in an industrial environment

**Course Outcomes:**

Upon completion of this course, students will be able to:

1. Survey the literature such as books, national/international refereed journals and contact resource persons for the selected topic of research/project field.
2. Consolidate the literature survey and will be motivated to define the title of the project, able to decide the aim(s), objectives and design specifications of the project.
3. Learn the required software/ computational/analytical tools for implementations.
4. Document a report comprising of summary of literature survey, detailed objectives, project specifications, or computer aided design, proof of concept/functionality, part of results if any.

**Prerequisite:** Knowledge on Programming and Problem Solving, Computer Organization and embedded systems.

**Course Objectives:**

This course aims to:

1. Provide an overview of Internet of Things, building blocks of IoT and the real-world applications.
2. Introduce Python Programming language and packages.
3. Introduce Raspberry Pi device, its interfaces and Django Framework.

**Course Outcomes:**

Upon completion of this course, students will be able to:

1. Understand the terminology, enabling technologies and applications of IoT
2. Apply the concept of M2M and understand the basics of modern networking with the concepts of SDN and NFV.
3. Understand the basics of Python Scripting Language which is used in many IoT devices.
4. Describe the steps involved in IoT system design methodology.
5. Design simple IoT systems using Raspberry Pi board with sensors, actuators and develop web applications using python-based framework called Django.

**Introduction and Concepts:** Introduction to Internet of Things, definitions and characteristics of IoT, physical design of IoT-Things in IoT, IoT Protocols, Logical Design of IoT-IoT Functional Blocks, IoT Communication Models, IoT Communication APIs, IOT Enabling Technologies Wireless Sensor Networks, Cloud Computing, Big Data Analytics, Communication Protocols, Embedded Systems, IoT Levels & Deployment Templates.

**UNIT-II**

**Domain Specific IoTs:** IoT applications for Home Automation, Cities, Environment, Energy, Retail, Logistics, Agriculture, Industry, health and Lifestyle

**IoT and M2M:** Introduction, M2M, Differences between IoT and M2M, Software Defined Networking, Network Function Virtualization.

**UNIT-III**

**Introduction to Python:** Motivation for using Python for designing IoT systems, Language features of Python, Data types- Numbers, Strings, Lists, Tuples, Dictionaries, Type Conversions, Data Structures: Control of flow-if, for, while, range, break/continue, pass, functions, modules, packaging, file handling, data/time operations, classes, Exception handling, Python packages of Interest for IoT - JSON, XML, HTTPLib, URLLib and SMTPLib.

**UNIT-IV**

**IoT Platforms Design Methodology:** Introduction, IoT Design Methodology Steps-Purpose and Requirements Specification, Process Specification, Domain Model Specification, Information Model Specification, Service Specifications, IoT Level Specification, Functional View Specification, Operational View Specification, Device and Component Integration, Application Development, Case Study on IoT System for Weather Monitoring.

**UNIT-V**

**IoT Physical Devices and End Points:** Basic building blocks of an IoT device, Raspberry Pi-About the Raspberry Pi board, Raspberry Pi Interfaces-Serial, SPI, I2C, Other IoT Devices-pcDuino, BeagleBone Black, Cubieboard

**IoT Physical Servers and Cloud Offerings:** Introduction to cloud storage models and Communication APIs, WAMP-AutoBahn for IoT, Xivelycloud for IoT

**Prerequisite:** The knowledge of Wireless/Mobile communications is essential.

**Course Objectives:**

This course aims to:

1. Understanding of Sensor node architecture with hardware and software details for data storage and data dissemination.
2. Familiarization of sensor network protocols such as network based and cluster-based protocols.
3. Analysis of issues pertaining to connectivity, coverage and security in a WSN.

**Course Outcomes:**

Upon completion of this course, students will be able to:

1. Recall the Network Architecture, hardware details, programming tools, Protocols and Special feature of WSN.
2. Demonstrate hardware and Programming Tools for Performance comparison of wireless sensor networks simulation and experimental platforms
3. Analyze Sensor Network Protocols and Security Challenges, Sensor deployment mechanisms.
4. Identify open issues for future research, and enabling technologies in wireless sensor network
5. Design wireless sensor network system for different applications under consideration.

**UNIT-I**

Introduction and overview of sensor network architecture and its applications, Sensor Network comparison with Ad-Hoc Networks, Sensor node architecture with hardware and software details. Data dissemination and processing; differences compared with other database management systems, data storage; query processing.

**UNIT-II**

**Hardware:** Examples like mica2, mica-Z, telos-B, cricket, Imote2, T-node, Bt-node, and Sun SPOT, Software (Operating Systems): tiny OS, MANTIS, Contiki, and Ret-OS.

**UNIT-III**

**Programming tools:** C, net-C. Performance comparison of wireless sensor networks simulation and experimental platforms like open source (NS-2) and commercial

**UNIT-IV**

**Overview of Sensor Network Protocols** (Details of At Least 2 Important Protocols Per Layer): Physical, MAC and routing/ Network layer protocols, node discovery protocols, multi-hop and cluster-based protocols, Fundamentals of 802.15.4, Bluetooth, Bluetooth low energy (BLE), UWB.

**UNIT-V**

**Specialized Features of WSN:** Energy preservation and efficiency; security challenges; fault tolerance, Issues related to Localization, connectivity and topology, Sensor deployment mechanisms; coverage issues; sensor Web; sensor Grid, Open issues for future research, and Enabling technologies in wireless sensor network.

2. Formulate the research problem, prepare the research design
3. Identify various sources for literature review and data collection report writing
4. Equip with good methods to analyze the collected data
5. Know about IPR copyrights

**Course Outcomes:**

Upon completion of this course, students will be able to:

1. Define research problem, review and assess the quality of literature from various sources
2. Improve the style and format of writing a report for technical paper/ Journal report, understand and develop various research designs
3. Collect the data by various methods: observation, interview, questionnaires

**UNIT-I**

**Research Methodology:** Research Methodology: Objectives and Motivation of Research, Types of Research, research approaches, Significance of Research, Research Methods versus Methodology, Research Process, Criteria of Good Research, Problems Encountered by Researchers in India, Benefits to the society in general. Defining the Research Problem: Selection of Research Problem, Necessity of Defining the Problem

**UNIT-II**

**Literature Survey Report Writing:** Literature Survey: Importance and purpose of Literature Survey, Sources of Information, Assessment of Quality of Journals and Articles, Information through Internet. Report writing: Meaning of interpretation, layout of research report, Types of reports, Mechanics of writing a report. Research Proposal Preparation: Writing a Research Proposal and Research Report, Writing Research Grant Proposal

**UNIT-III**

**Research Design:** Research Design: Meaning of Research Design, Need of Research Design, Feature of a Good Design, Important Concepts Related to Research Design, Different Research Designs, Basic Principles of Experimental Design, Developing a Research Plan, Steps in sample design, types of sample designs.

**UNIT-IV**

**Data Collection and Analysis:** Data Collection: Methods of data collection, importance of Parametric, non-parametric test, testing of variance of two normal population, use of Chi-square, ANOVA, F-test, z-test

**UNIT-V**

**Patents and Copyright:** Patent: Macro economic impact of the patent system, Patent document, how to protect your inventions. Granting of patent, Rights of a patent, how extensive is patent protection. Copyright: What is copyright. What is covered by copyright? How long does copyright last? Why protect copyright? Related Rights: what are related rights? Enforcement of Intellectual Property Rights: Infringement of intellectual property rights, Case studies of patents and IP Protection

**Course Objectives:**

This course aims to:

1. Equip the students with the basic knowledge of hazards, disasters, risks and vulnerabilities including natural, climatic and human induced factors and associated impacts
2. Impart knowledge in students about the nature, causes, consequences and mitigation measures of the various natural disasters
3. Enable the students to understand risks, vulnerabilities and human errors associated with human induced disasters
4. Enable the students to understand and assimilate the impacts of any disaster on the affected area depending on its position/ location, environmental conditions, demographic, etc.
5. Equip the students with the knowledge of the chronological phases in a disaster management cycle and to create awareness about the disaster management framework and legislations in the context of national and global conventions

**Course Outcomes:**

Upon completion of this course, students will be able to:

1. Ability to analyze and critically examine existing programs in disaster management regarding vulnerability, risk and capacity at different levels
2. Ability to understand and choose the appropriate activities and tools and set up priorities to build a coherent and adapted disaster management plan
3. Ability to understand various mechanisms and consequences of human induced disasters for the participatory role of engineers in disaster management
4. Understand the impact on various elements affected by the disaster and to suggest and apply appropriate measures for the same
5. Develop an awareness of the chronological phases of disaster preparedness, response and relief operations for formulating effective disaster management plans and ability to understand various participatory approaches/strategies and their application in disaster management.

**UNIT-II**

**Natural Disasters:** Hydro meteorological disasters: Causes, Early warning systems- monitoring and management, structural and non-structural measures for floods, drought and Tropical cyclones; Geographical based disasters: Tsunami generation, causes, zoning, Early warning systems- monitoring and management, structural and non-structural mitigation measures for earthquakes, tsunami, landslides, avalanches and forest fires. Case studies related to various hydro meteorological and geographical based disasters.

**UNIT-III**

**Human Induced Hazards:** Chemical disaster- Causes, impacts and mitigation measures for chemical accidents, Risks and control measures in a chemical industry, chemical disaster management; Case studies related to various chemical industrial hazards eg: Bhopal gas tragedy; Management of chemical terrorism disasters and biological disasters; Radiological Emergencies and case studies; Case studies related to major power break downs, fire accidents, traffic accidents, oil spills and stampedes, disasters due to double cellar construction in multistoried buildings.

**UNIT-IV**

**Disaster Impacts:** Disaster impacts- environmental, physical, social, ecological, economical, political, etc.; health, psycho-social issues; demographic aspects- gender, age, special needs; hazard locations; global and national disaster trends; climate change and urban disasters.

**UNIT-V**

**Concept of Disaster Management:** Disaster management cycle – its phases; prevention, mitigation, preparedness, relief and recovery; risk analysis, vulnerability and capacity assessment; Post-disaster environmental response- water, sanitation, food safety, waste management, disease control; Roles and responsibilities of government, community, local institutions, NGOs and other stakeholders; Policies and legislation for disaster risk reduction, DRR Programs in India and the activities of National Disaster Management Authority.

**Course Objectives:**

This course aims to:

1. Creating awareness about different types of stress and the role of yoga in the management of stress.
2. Promotion of positive health and overall wellbeing (Physical, mental, emotional, social and spiritual).
3. Prevention of stress related health problems by yoga practice.

**Course Outcomes:**

Upon completing this course, students will be able to:

1. Understand yoga and its benefits.
2. Enhance Physical strength and flexibility.
3. Learn to relax and focus.
4. Relieve physical and mental tension through asanas
5. Improve work performance and efficiency.

**Course Objectives:**

This course aims to

1. Understand the need and importance of Values for self-development and for National development.
2. Imbibe good human values and Morals
3. Cultivate individual and National character.

**Course outcomes:**

After completion of the Course, Students will be able to

1. Summarize classification of values and values for self-development.
2. Identify the importance of values in personal and professional life.
3. Apply the importance of social values for better career and relationships.
4. Compile the values from holy books for personal and social responsibility.
5. Discuss concept of soul and reincarnation, values Dharma, Karma and Guna.

**UNIT-I**

**Human Values, Ethics and Morals:** Concept of Values, Indian concept of humanism, human values; Values for self-development, Social values, individual attitudes; Work ethics, moral and non-moral behavior, standards and principles based on religion, culture and tradition.

**UNIT-II**

**Value Cultivation, and Self-Management:** Need and Importance of cultivation of values such as Sense-of Duty, Devotion to work, Self-reliance, Confidence, Concentration, Integrity & discipline, and Truthfulness.

**UNIT-III**

**Spiritual Outlook and Social Values:** Personality and Behavior, Scientific attitude and Spiritual (soul) outlook; Cultivation of Social Values Such as Positive Thinking, Punctuality, Love & Kindness, avoiding fault finding in others, Reduction of anger, forgiveness, Dignity of labour, True friendship, Universal brotherhood and religious tolerance.

**UNIT-IV**

**Values in Holy Books** : Self-management and Good health; **and internal & external Cleanliness**, Holy books versus Blind faith, Character and Competence, Equality, Nonviolence, Humility, Role of Women.

**UNIT-V**

**Dharma, Karma and Guna:** Concept of soul; Science of Reincarnation, Character and Conduct, Concept of Dharma; Cause and Effect based Karma Theory; The qualities of Devine and Devilish; Satwic, Rajasic and Tamasicgunas.

2. Study various business analytics methods including predictive, prescriptive and prescriptive analytics
3. Prepare the students to model business data using various data mining, decision making methods

**Course Outcomes:**

Upon completing this course, students will be able to:

1. Identify and describe complex business problems in terms of analytical models.
2. Apply appropriate analytical methods to find solutions to business problems that achieve stated objectives.
3. Interpret various metrics, measures used in business analytics
4. Illustrate various descriptive, predictive and prescriptive methods and techniques
5. Model the business data using various business analytical methods and techniques
6. Create viable solutions to decision making problems

**UNIT-I**

**Introduction to Business Analytics:** Introduction to Business Analytics, need and science of data driven (DD) decision making, Descriptive, predictive, prescriptive analytics and techniques, Big data analytics, Web and Social media analytics, Machine Learning algorithms, framework for decision making, challenges in DD decision making and future.

**UNIT-II**

**Descriptive Analytics:** Introduction, data types and scales, types of measurement scales, population and samples, measures of central tendency, percentile, decile and quadrille, measures of variation, measures of shape-skewness, data visualization

**UNIT-III**

**Forecasting Techniques:** Introduction, time-series data and components, forecasting accuracy, moving average method, single exponential smoothing, Holt's method, Holt-Winter model, Croston's forecasting method, regression model for forecasting, Auto regression models, auto-regressive moving process, ARIMA, Theil's coefficient

**UNIT-IV**

**Decision Trees:** CHAID, Classification and Regression tree, splitting criteria, Ensemble and method and random forest. **Clustering:** Distance and similarity measures used in clustering, Clustering algorithms, K-Means and Hierarchical algorithms, **Prescriptive Analytics-** Linear Programming (LP) and LP model building,

3. Fabrication methods of metal matrix composites.
4. Manufacturing of Polymer matrix composites.
5. Failure mechanisms in composite materials.

**Course Outcomes:**

Upon completing this course, students will be able to:

1. Classify and characterize the composite materials.
2. Describe types of reinforcements and their properties.
3. Understand different fabrication methods of metal matrix composites.
4. Understand different fabrication methods of polymer matrix composites.
5. Decide the failure of composite materials.

**UNIT-I**

**Introduction:** Definition, classification and characteristics of composite materials, advantages and application of composites, functional requirements of reinforcement and matrix, effect of reinforcement (size, shape, distribution, volume fraction) on overall composite performance.

**UNIT-II**

**Reinforcements:** Preparation-layup, curing, properties and applications of glass fibers, carbon fibers, kevlar fibers and boron fibers, properties and applications of whiskers, particle reinforcements, mechanical behavior of composites, rule of mixtures, inverse rule of mixtures, isostrain and isostress conditions.

**UNIT-III**

**Manufacturing of metal matrix composites:** Casting, solid state diffusion technique, cladding, hot isostatic pressing, properties and applications.

**Manufacturing of ceramic matrix composites:** liquid metal infiltration, liquid phase sintering.

**Manufacturing of carbon-carbon composites:** knitting, braiding, weaving, properties and applications.

**UNIT-IV**

**Manufacturing of Polymer Matrix Composites:** Preparation of moulding compounds and prepregs, hand layup method, autoclave method, filament winding method, compression moulding, reaction injection moulding, properties and applications.

**UNIT-V**

**Strength:** Lamina failure criteria-strength ratio, maximum stress criteria, maximum strain criteria, interacting failure criteria, hygrothermal failure, laminate first ply failure, insight strength.

3. Create an awareness on Project Monitoring and Cost Analysis
4. Provide adequate knowledge to the students on Recourse Management Costing-Variance Analysis
5. Train the students with the concepts of Budgetary Control for cost management and to provide basic platform on Quantitative techniques for cost management.

**Course Outcomes:**

Upon completing this course, students will be able to:

1. Acquire in-depth knowledge about the concepts of project management and understand the principles of project management.
2. Determine the critical path of a typical project using CPM and PERT techniques.
3. Prepare a work break down plan and perform linear scheduling using various methods.
4. Solve problems of resource scheduling and levelling using network diagrams.

**UNIT-I**

**Project Management:** Introduction to project managements, stakeholders, roles, responsibilities and functional relationships. Principles of project management, objectives and project management system. Project team, organization, roles, responsibilities. Concepts of project planning, monitoring, staffing, scheduling and controlling.

**UNIT-II**

**Project Planning and Scheduling:** Introduction for project planning, defining activities and their interdependency, time and resource estimation. Work break down structure. Linear scheduling methods-bar charts, Line of Balance (LOB), their limitations. Principles, definitions of network-based scheduling methods: CPM, PERT. Network representation, network analysis-forward and backward passes.

**UNIT-III**

**Project Monitoring and Cost Analysis:** introduction-Cost concepts in decision-making; Relevant cost, Differential cost, Incremental cost and Opportunity cost. Objectives of a Costing System; Inventory valuation; Creation of a Database for operational control; Provision of data for Decision-Making, Time cost tradeoff- Crashing project schedules, its impact on time on time, cost. Project direct and indirect costs.

**UNIT-IV**

**Resources Management and Costing-Variance Analysis:** Planning, Enterprise Resource Planning, Resource scheduling and levelling. Total Quality Management and Theory of constraints. Activity-Based Cost Management, Bench Marking; Balanced Score Card and Value-Chain Analysis

**Standard Costing and Variance Analysis.** Pricing strategies: Pareto Analysis. Target costing, Life Cycle Costing. Costing of service sector. Just-in-time approach, Material Requirement

**UNIT-V**

**Budgetary Control:** Flexible Budgets; Performance budgets; Zero-based budgets. Measurement of Divisional profitability pricing decisions including transfer pricing.

**Quantitative Techniques for Cost Management:** Linear Programming, PERT/CPM, Transportation Assignment problems, Simulation, Learning Curve Theory.

3. About wear and corrosion along with preventive steps to be taken.
4. The basic concepts and importance of fault tracing.
5. The steps involved in carrying out periodic and preventive maintenance of various equipments used in industry.

**Course Outcomes:**

Upon completion of this course, students will be able to:

1. Identify the causes for industrial accidents and suggest preventive measures for safety.
2. Understand the basic need and requirements of different maintenance procedures.
3. Apply different techniques to reduce and prevent wear and corrosion in industry.
4. Analyze different types of faults present in various equipments like machine tools, IC engines, boilers etc.
5. Formulate a plan for periodic and preventive maintenance techniques as required for industrial equipments like motors, pumps and air compressors.

**UNIT – I**

**Industrial safety:** Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, safety color codes, fire prevention and firefighting, equipment and methods.

**Workplace safety standards during pandemic:** workplace safety requirements mandating appropriate personal protective equipment, sanitation, social distancing, infectious disease preparedness and response plans, record keeping, training, and hazard communications in workplaces safety.

**UNIT – II**

**Fundamentals of maintenance engineering:** Definition and aim of maintenance engineering, primary and secondary functions and responsibility of maintenance

department, types of maintenance, types and applications of tools used for maintenance, maintenance cost & its relation with replacement economy, service life of equipment.

**UNIT – III**

**Wear:** Types, causes, effects, wear reduction methods.

**Lubrication:** Types and applications, lubrication methods, general sketch, working and applications of screw down grease cup, pressure grease gun, splash lubrication, gravity lubrication, wick feed lubrication, side feed lubrication, ring lubrication.

**Corrosion and prevention:** Definition of corrosion, principle and factors affecting the corrosion, types of corrosion, corrosion prevention methods.

**UNIT-IV**

**Fault tracing:** Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment's like, any one machine tool, pump, air compressor, internal combustion engine, boiler, electrical motors, types of faults in machine tools and their general causes.

**UNIT – V**

**Periodic and Preventive Maintenance:** Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components and electric motors. Periodic and preventive maintenance of machine tools, pumps, air compressors, diesel generator sets.
