Sub: Initiation of Consultancy Project: Reg.-

Dear Sir,

It is observed that, based on Dr. Thanikanti Sudhakar Babu, research profile, research articles, research metrics like citations and h-index, and as per our continuous discussions on research collaboration, I am interested to grant him a consultancy project to avail his research services as a principal investigator from your esteemed institution. As part of this project, the PI and his team will work on developing various innovative approaches to enhance power generation from renewable energy resources. The total project amount for two years is USD 26400. The project fund should be utilized to recruit a postdoctoral research fellow/Research Scientist/Senior Research fellow and pay him a monthly salary for two years and any miscellaneous expenditure.

I assure you that this initiation will lead to a major project in the future and it will be benefitted to both institutions.

The details of the project are given as follows:

Project title in short	: Enhancement of the performance of different renewable energy sources using modern techniques
Grant number	: NU-CBIT/BH-TSB/01/2022
Project fund	: USD 26400.
Duration	: Two years

The complete information about the project is provided in the Contract for Availing Research Service document.

Thank you,

Yours Sincerely

Dr. Belqasem Aljafari, Ph.D.

Appendix A

Project Title: Enhancement of the performance of different renewable energy sources using modern techniques

Problem Statement:

PV power plants and Building Integrated PV Systems (BIPVs) are highly prone to partial shading encountering total losses of higher than 80% annually. The lowest current generated by shaded modules causing power loss limits current output. Creates hotspot in the shaded cells/modules resulting in permanent damage of the modules. Bypass diodes enhance the current flow (for hotspot reduction) by compromising with the voltage of the shaded modules and hence reducing overall power. Create multiple peaks in the characteristics curves causing MPPT tracking failure and additional losses. Partial shading contributes to 70% of losses in the converters connected to the system. Mitigation techniques are available in the literature exhibits vulnerabilities such as accuracy, sensors and switches requirements, complexity, cost, efficiency, ease of implementation, and operation.

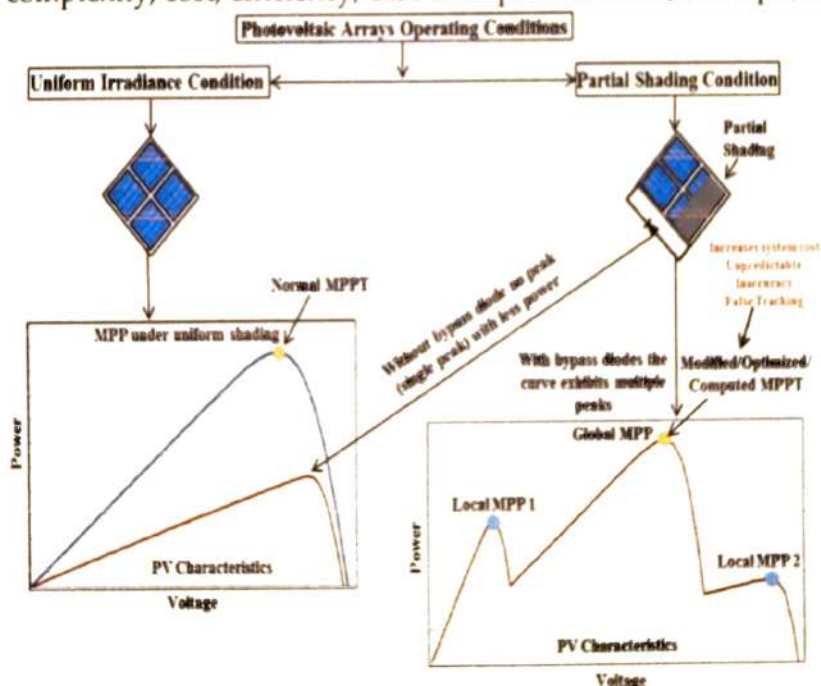

Fig. 1. Pictorial representation of Problem statement

Research Objective:

- Mathematical, theoretical, simulation, and experimental analysis of the effect of partial shading in the conventional PV systems.
- Role of bypass diodes (including faults) and their configurations in the power generation, hotspot reduction, and shading mitigation of the PV modules.
- Real-time detection and assessment of partial shading occurrence in large PV power plants and BIPVs.
- Proposal of cost-effective and high accuracy GMPP tracking mechanism for MPPTs controls in order to reduce the complexity and ease of operation in the system during shading.

Research Outcome:

By analyzing and executing above mentioned project the results should be published in reputed international as given follows:

- By developing various partial shading mitigation techniques like PV reconfiguration via static and dynamic reconfiguration techniques, switching capacitor approaches, and other new innovative methodologies, the outcome of the work should publish in various reputed journals (Minimum of eight research articles are expected).
- The outcome work must be published in the Q1 journal (Three research articles less than 10% (A), three research articles less than 20% (B), and two research articles above 20% (C)).

The project report will be prepared based on the analysis carried out and objectives met.
