CHAITANYA BHARATHI INSTITUTE OF TECHNOLOGY (Autonomous)

Gandipet, Hyderabad-75

Department of Artificial Intelligence & Mechine Learning

Course Outcomes Statement for BE. CSE(AIML) R-22

S.No	Course		Course Outcomes Statements
	Code	Name	
			Determine the extreme values of functions of two
			variables.
			Apply the vector differential operator to scalar and
			vector functions
1	22MTC01	Linear Algebra & Calculus	Solve line, surface & volume integrals by Greens, Gauss
			and Stoke's theorems.
			Determine the basis and dimension of a vector space,
			compute linear transformation
			Apply the Matrix Methods to solve the system of linear
			equations
			Demonstrate the physical properties of light
	2221/024		Explain characteristic properties of lasers and fiber optics
2	22PYC01	Optics and	Find the applications of quantum mechanics
		Semiconductor Physics	Classify the solids depending upon electrical conductivity
			Identify different types of semiconductors
			Understand real world problems and develop computer
			solutions for those problems.
			Understand the basics of Python
3	22CSC01	Problem Solving And	Apply Python for solving basic programming solutions.
		Programming	Create algorithms/flowcharts for solving real-time
			problems.
			Build and manage dictionaries to manage data.
			Handle data using files.
			Illustrate the nature, process and types of
			communication and communicate effectively without
			Darriers.
4	2256601	English	construct and compose concrent paragraphs, emails and
4	ZZEGCUI	English	Authening to appropriate mobile eliquette.
			formal lottors by using accontable grammar and
			appropriate vocabulary
			Distinguish formal from informal reports and
			demonstrate advanced writing skills by drafting formal
			reports.
			Critique passages by applying effective reading
			techniques
3	22CSC01 22EGC01	Problem Solving And Programming English	Understand the basics of Python Apply Python for solving basic programming solutions. Create algorithms/flowcharts for solving real-time problems. Build and manage dictionaries to manage data. Handle data using files. Illustrate the nature, process and types of communication and communicate effectively without barriers. Construct and compose coherent paragraphs, emails and adhering to appropriate mobile etiquette. Apply techniques of precision to write a précis and formal letters by using acceptable grammar and appropriate vocabulary. Distinguish formal from informal reports and demonstrate advanced writing skills by drafting formal reports. Critique passages by applying effective reading techniques

			Interpret the errors in the results of an experiment.
			Demonstrate physical properties of light experimentally
		Optics and	Make use of lasers and optical fibers for engineering
	22PYC03	Semiconductor Physics	applications
5		Lab	Explain the V-I characteristics of some optoelectronic
			and semiconductor devices
			Find the applications of thermistor
			Define the speech sounds in English and understand the
			nuances of pronunciation in English
			Apply stress correctly and speak with the proper tone,
6	22EGC02	English lab	intonation and rhythm
			Analyze listening comprehension texts to enhance their
			listening skills.
			Determine the context and speak appropriately in
			various situations.
			Design and present effective posters while working in
			teams, and discuss and participate in Group discussions.
			Understand various Python program development
			Environments
_			Demonstrate the concepts of Python
7	22CSC02	Problem Solving and	Implement algorithms/flowcharts using Python to solve
		Programming Lab	real-world problems.
			Build and manage dictionaries to manage data.
			Write Python functions to facilitate code reuse.
			Use Python to handle files and memory.
			Become conversant with appropriate use of CAD
			software for drafting.
	22145004		Recognize BIS, ISO Standards and conventions in
8	22MEC01	CAD AND DRAFTING	Engineering Drafting.
			Construct the projections of points, lines, planes, solids
			Analyse the internal details of solids through sectional
			VIEWS
			Create an isometric projections and views
			Understand safety measures to be followed in workshop
			to avoid accidents.
			Identify various tools used in carpentry, house wiring and
0	22145620		plumbing.
9	22MEC38	Digital Fabrication Lab	Make a given model by using workshop trades like
			carpentry, plumbing, House wiring and 3d modeling
			using solid works software for Additive Manufacturing.
			Perform pre-processing operations on STL files for 3D
			printing, also understand reverse engineering process.
			Conceptualize and produce simple device/mechanism of
			their choice.

			Calculate the solutions of first order linear differential
			equations.
			Calculate the solutions of higher order linear differential
		Differential Equations &	equations.
11	22MTC04	Numerical Methods	Solve the algebraic, transcendental and system of equations.
			Apply interpolation and numerical differentiation techniques
			for given data.
			Test the convergence and divergence of Infinite series.
			Identify the microscopic chemistry in terms of molecular
			orbitals, intermolecular forces and rate of chemical reactions.
			Discuss the properties and processes using thermodynamic
			functions, electrochemical cells and their role in batteries and
12	22CYC01	Chemistry	fuel cells.
			Illustrate the major chemical reactions that are used in the
			synthesis of organic molecules.
			Classify the various methods used in treatment of water for
			domestic and industrial use.
			Outline the synthesis of various Engineering materials &
			Drugs.
	0055004		Understand the concepts of Kirchhoff's laws and their
			application various theorems to get solution of simple dc
			circuits.
10			Predict the steady state response of RLC circuits with AC single
			phase/three phase supply.
13	22EEC01	Basic Electrical Engineering	Infer the basics of single phase transformer
			Describe the construction, working principle of DC machine
			and 3-phase Induction motor.
			Acquire the knowledge of electrical wires, cables, earthing,
			Electrical safety precautions to be followed in electrical
			installations and electric shock and its safety and energy
			Understand the concepts of Object-Oriented features.
	2265602	Object Originated	Apply OOPs concepts and different libraries to solve
1.4			programming problems.
14	2203003	Dispect Oriented	Understand the advanced concepts of Python.
		Programming	Develop programs to access databases and web data.
			Understand APIs and third-party libraries to be used with
			Python.
			Identify the basic chemical methods to analyse the substances
			quantitatively & qualitatively.
			Estimate the amount of chemical substances by volumetric
	2201022		analysis.
14	220102	Chemistry Lab	Determine the rate constants of reactions from concentration
			of reactants/ products as a function of time.
			Calculate the concentration and amount of various substances
			using instrumental techniques.
			Develop the basic drug molecules and polymeric compounds.

			Gain an understanding of Rural life, Culture and Social
			realities.
			Develop a sense of empathy and bonds of mutuality with
			Local Communities.
15	22MBC02	Community Engagement	Appreciate significant contributions of Local communities to
			Indian Society and Economy.
			Exhibit the knowledge of Rural Institutions and contributing to
			Community's Socio-Economic improvements.
			Utilise the opportunities provided by Rural Development
			Programmes.
			Demonstrate the features of Object-Oriented Programming.
			Understand APIs and third-party libraries to be used with
			Python.
			Use Python libraries to solve real-world problems.
16	22CSC04	Object-Oriented	Write scripts to solve data science/machine leaning problems
		Programming Lab	using NumPy and Pandas.
			Develop applications by accessing web data and databases.
			Demonstrate knowledge of the relationship between
			mechanical structures of robotics and their operational
			workspace characteristics
			Understand mechanical components, motors, sensors and
17	22MEC37	Robotics & Drones Lab	electronic circuits of robots and build robots.
			Demonstrate knowledge of robot controllers.
			Use Linux environment for robotic programming.
			Write Python scripts to control robots using Python and Open
			CV.
			Comprehend the circuit analysis techniques using various
			circuital laws and theorems
			Analyse the parameters of the given coil and measurement of
			power and energy in AC circuits
18	22EEC02	Basic Electrical Engineering	Determine the turns ration/performance parameters of
		Lab	single-phase transformer
			Infer the characteristics of DC shunt motor different tests.
			Illustrate different parts and their function of electrical
			components, equipment and machines.

Course Outcomes Statements for BE (CSE-AIML)-R20

B.E. Program Outcomes (PO's)

Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals and an engineering specialization for the solution of complex engineering problems

Problem analysis: Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Design/development of solutions: Design solutions for complex engineeringproblems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.

Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling to complex engineering activities, with an understanding of the limitations.

The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

Individual and team work: Function effectively as an individual, and as a memberor leader in diverse teams, and in multidisciplinary settings.

Communication: Communicate effectively on complex engineering activities with the engineering community and with the society at large, such as, being able to comprehend and write effective

reports and design documentation, make effective presentations, and give and receive clear instructions.

Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, member and leader in a team, to manage projects and in multidisciplinary environments.

Life-long learning: Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

R20:

Department Vision

Department Mission

PROGRAM EDUCATION OBJECTIVES (PEOs): After the completion of the program, our:

- 1. Graduates will apply their knowledge and skills to succeed in their careers and/or obtain advanced degrees, provide solutions as entrepreneurs
- 2. Graduates will creatively solve problems, communicate effectively, and successfully function in multidisciplinary teams with superior work ethics and values
- Graduates will apply principles and practices of Computer Science, mathematics and Science to successfully complete hardware and/or software-related engineering projects to meet customer

Program Specific Outcomes (PSOs):

- 1. Acquire knowledge and practical competency with emerging technologies and open-source platforms related to the areas of Artificial Intelligence and Machine Learning
- 2. Apply their professional skills in the field of algorithms, networking, image processing and computer vision, deep learning, and data analytics.
- Provide Novel solutions to existing societal problems by employing contemporary trends in industry.

CHAITANYA BHARATHI INSTITUTE OF TECHNOLOGY (Autonomous) Gandipet, Hyderabad -75 Department Of Computer Science and Engineering Course Outcomes Statement for (BE CSE-AI&ML) R-20

Sive Code Name Course Outcomes Statements 1. 20MT C01 Linear Algebra & Calculus Apply the Matrix Methods to solve the system of linear equations 1. 20MT C01 Linear Algebra & Calculus Apply the Matrix Methods to solve the system of linear equations 2. 20EG C01 English Test the convergence and divergence of the infinite Series. Determine the extreme values of functions of two variables. Apply the vector differential operator to scalar and vector functions 2. 20EG C01 English Illustrate the nature, process and types of communication and communicate effectively without barriers. Construct and compose coherent paragraphs, emails and adhering to appropriate mobile eiquette. Apply techniques of precision to write a price and appropriate vocabulary. 3. 20PY C01 Optics and Semiconductor Physics Distinguish formal from informal reports and demonstrate advanced writing skills by drating formal reports. Critique passages by applying effective reading techniques 4. 20CS C01 Programming for Problem Solving Identify and understand the computing environments for scientific and stypes and control structures to solve mathematical and scientific problem. 5. 20MT C02 Linear Algebra & Calculus Lab Apply the Matrix operations in executing various programmes. Test the convergence and divergence of the infinite Series. Develop applications using file I/O.	CN-	Course

Professor and Head Department Department of Computer Science & Engineering itanya Bharathi Institute of Technology (A) of Hyderabad-500 075.(T.S.)

			intonation and rhythm.
			Analyze IELTS and TOEFL listening comprehension texts to enhance their listening skills.
			Determine the context and speak appropriately in various situations.
			Design and present effective posters while working in teams, and discuss and participate in Group discussions.
			Interpret the errors in the results of an experiment.
		Option and	Demonstrate physical properties of light experimentally
7.	20PY C03	Semiconductor Physics Lab	Make use of lasers and optical fibers for engineeringapplications
			Explain the V-I characteristics of some optoelectronic and semiconductor devices
			Find the applications thermistor
			Identify and setup program development environment.
		Programming for	Design and test programs to solve mathematical and scientific problems.
8.	20CS C02	problem Solving	Identify and rectify the syntax errors and debug program for semantic errors
		2	Implement modular programs using functions.
			Represent data in arrays, pointers, structures and manipulate
			them through a program.
			Create, read, and write to and from simple text files.
			Become conversant with appropriate use of CAD software for drafting.
9.	20ME C01	CAD AND DRAFTING	Recognize BIS, ISO Standards and conventions in Engineering Drafting.
			Construct the projections of points, lines, planes, solids
			Analyse the internal details of solids through sectional views
			Create an isometric projections and views
			Gain an understanding of Rural life, Culture and Socialrealities.
10	20MB C02	Community	Develop a sense of empathy and bonds of mutuality with Local Communities.
10.	201415 C02	Engagement	Appreciate significant contributions of Local communities toIndian Society and Economy.
			Exhibit the knowledge of Rural Institutions and contributing to
			Community's Socio-Economic improvements.
			Utilise the opportunities provided by Rural Development Programmes.
			Calculate the solutions of first order linear differentialequations.
11	20MT C03	Differential	Calculate the solutions of higher order linear differential
	20111 005	Equations&	Evamine the series solutions for higher order diff.
		Transform Theory	equations.
			Evaluate the Improper integrals by Fourier Transform
			Solve the difference equations by Z-transforms
10	2002/001	Chamistry	Identify the microscopic chemistry in terms of molecularorbitals
12.	2004001	Chemisury	intermolecular forces and rate of chemical reactions.

You

			Discuss the properties and processes using thermodynamic functions, electrochemical cells and their role in batteries and fuel cells.
			Illustrate the major chemical reactions that are used in thesynthesis of organic molecules.
			Classify the various methods used in treatment of water for domestic and industrial use.
			Outline the synthesis of various Engineering materials & Drugs.
			Identify the key drivers and enablers of Industry4.0
			products, ad smart services
13.	20CS C05	Industry 4.0	role in an Industry 4.0world
			Illustrate the power of Cloud Computing in a networkedeconomy
			Understand the opportunities, challenges, brought about by Industry 4.0 and how organizations and individuals should prepare to reap the benefits
			Demonstrate the concepts of Object-Oriented Programming languages to solve problems.
14	2005 003	Object	Apply the constructs like selection, repetition, functions and packages to modularize the programs.
14.	2000 005	Oriented	Design and build applications with classes/modules.
		Programming	Find and rectify coding errors in a program to assess and improve performance.
			Develop packages for solving simple real world problems.
			Analyze and use appropriate library software to create graphical interface, mathematical software.
			Explore all the possible solutions of first order differentialequation.
15.	20MT C04	Equations	Analyse the solutions of higher order linear differential equations.
		Lab	Examine the series solutions for higher order differential equations.
			Evaluate the Improper integrals by Fourier Transform.
			Apply the Z-transform to solve the difference equations.
			identify the basic chemical methods to analyse the substances quantitatively & qualitatively.
16	20022002		Estimate the amount of chemical substances by volumetricanalysis.
10.	200 1002	Chemistry Lab	Determine the rate constants of reactions from concentration of reactants/ products as a function of time.
			Calculate the concentration and amount of various substances using instrumental techniques
			Develop the basic drug molecules and polymeric compounds.
			Inspect and identify suitable programming environment to workwith Python.
17.	20CSC04	Object Oriented Programming	Choose appropriate control constructs, data structures to build the solutions.
		Lab	Develop the solutions with modular approach using functions, packages to enhance the code efficiency.

			Analyze and debug the programs to verify and validate code.
			Demonstrate use of STLs and modules to build graphical interfaces, mathematical software.
			Determine the requirements of real-world problems and use
			appropriate modules to develop solutions.
			Understand safety measures to be followed in workshop to avoid accidents.
		Washelser	Identify various tools used in fitting, carpentry, tin smithy,
18.	20ME C02	Workshop / Manufacturing	house wiring, welding, casting and machining processes.
	20002 002	Practice	Make a given model by using workshop trades including fitting, carpentry, tinsmithy and House wiring.
			Perform various operations in welding, machining and casting processes.
		*	Conceptualize and produce simple device/mechanism of their choice.
			Understand the role of an engineer as a problem solver.
	00) (F) 000		Identify multi-disciplinary approaches in solving an engineering problem.
19.	20ME C03	Engineering	Build simple systems using engineering design process.
		Exploration	Analyze engineering solutions from ethical and sustainability perspectives.
			Use basics of engineering project management skills in doing projects.
		Basic Electrical Engineering	Understand the concepts of Kirchhoff's laws and to apply them
			in superposition, Thevenin's and Norton's theorems to get the
			solution of simple dc circuits
			and to acquire the basics relationship between when and to
			current in three phase circuits
	20EEC01		Understand the principle of operation, the emf and torque
20.			equations and classification of AC and DC machines
			Explain various tests and speed control methods to determine the characteristic of DC and AC machines.
			Acquire the knowledge of electrical wiring, types of wires,
			cables used and Electrical safety precautions to be followed in electrical installations
			Recognize importance of earthing, methods of earthing and
			various low-tension switchgear used in electrical installations
			Interpret the usage of semiconductor devices in making circuits like rectifiers, filters, regulators etc
			Design and Analyse the characteristics of electronic circuits and
			systems
21.	20ECC35	Basic Electronics	Make use of various types of small and large signal amplifiers for electronic control systems
			Model a prototype module using the operational amplifier for
			real time applications
			Evaluate the performance of various semiconductor devices
22.	20CSC08	Data Structures	Understand the basic concepts of data structures and sorting techniques.
			Analyze the performance of algorithms

Professor and Head Department Department of Computer Science & Engineering Chaitanya Bharathi Institute of Technology (A)

			Distinguish between linear and non-linear data structures.
			Apply linear and non-linear data structures
			Identify the significance of balanced search trees, graphs and hashing
			. Establish a suitable data structure for real world applications.
			Describe rules of inference for Propositional and Predicate logic.
			Demonstrate use of Set Theory, Venn Diagrams, relations, functions in Real-world scenarios
23.	20CSC09	Discrete Mathematics	Model solutions using Generating Functions and Recurrence Relations.
			Determine the properties of graphs and trees to solve problems arising in computer science applications.
			algebraic systems.
			Demonstrate the number system conversions and simplify
			Boolean functions.
			Recall basic theorems and properties of Boolean algebra to represent logical functions in canonical and standard forms
			Analyze and simplify Boolean expressions using karnaugh-
24.	20CSC10	Digital Logic Design	maps and tabulation method.
			Sequential circuits used in Computer Hardware
			Understand the designs of Combinational and Sequential
			circuits using Verilog HDL.
			Develop different applications by configuring registers, counters
			and memories.
			Apply data elegating transformation of the significance of data science tools and techniques
			techniques
25	2004 001	Fundamentals of Data	Analyze various inferential statistics and time-series methods
25.	20CAC01	Science	Understand and apply data visualization techniques.
			Understand predictive analytics and its applications.
			Apply data science techniques to deal with the real-world
			problems.
			and basic electrical measuring equipment.
			Make electrical connections by wires of appropriate ratings and
			able to measure electric power and energy
		Basic Electrical Engineering	Comprehend the circuit analysis techniques using various
26.	20EEC02	Lab	Determine the parameters of the given coil and calculate the
			time response of RL & RC series circuits
			Recognize the basic characteristics of transformer and
			components of switchgear
			Understand the basic characteristics of dc and ac machine by
			conducting different types of tests on them
			devices, and systems
			Analyze the measurements of time period, amplitude and phase
27	2050026	Pasia Electropics Lab	of different waveforms.
21.	20ECC36	Basic Electronics Lab	Design and analyze the behavior of the diode and transistor
			Develop various types of feedback and any and if feedback
			Examine the functionality of various analog and digital aircuite
			and under on various analog and dignar circuits

28. 20CSC11 Data Structures Lab Implement Inner-dina structures such as stacks, queues using array and linked list. 29. 20CAC02 Fundamentals of Data Scructures. Design and develop real world problem using suitable data structures. 29. 20CAC02 Fundamentals of Data Science Lab Understand the significance of data science tools. 29. 20CAC02 Fundamentals of Data Science Lab Understand the significance of Inferential Statistics. 29. 20CAC02 Fundamentals of Data Science Lab Namyze the significance of Inferential Statistics. 30. 20CAI01 MOOCS / Training / Internship Analyze the significance of Time Series Forecasting. 31. 20ACT Activity Points Analyze the coefficient of skewness and fitting of the data by various distributions. 32. 20MTC13 Mathematical Foundation for Internship On successful completion of this course, Student will be able to: Internship 33. 20CSC13 Computer Architecture and Microprocessor Analyze the coefficient of skewness and fitting of the data by various distributions. 34. 20CSC14 Data Base Management Systems Systems Design a memory module and malyze its operation of instructions, addressing modes, instruction set. Design a memory moduce and heargic to functional describe the functional to instruc				Implement the abstract data type.
28. 20CSC11 Data Structures Lab array and linked list. 29. 20CSC11 Data Structures Lab Implement non-linear data structures such as trees, graphs 29. 20CAC02 Fundamentals of Data Science Lab Science of data science tools. 29. 20CAC02 Fundamentals of Data Analyze the significance of Inferential Statistics. 30. 20CAC01 MOOCs / Training / Internship Consultation of the significance of Time Series Forecasting. 30. 20CA101 MOOCs / Training / Internship On successful completion of this course, Student will be able to: Analyze the coefficient of skewness and fitting of the data by various distributions 31. 20ACT Activity Points Analyze the coefficient of skewness and fitting of the data by various distributions 32. 20MTC13 Mathematical Foundation for Data Science & Security Evaluate areas of curves by using various distributions 33. 20CSC13 Computer Architecture and Microprocessor Understand the functional block diagram of single bus architecture of a computer and describe the function of the instruction security is succ. 34. 20CSC14 Data Base Management Systems Consult with the CPU. 34. 20CSC14 Data Base Management Systems Consult with the different users and the structure of the datasel ogical with a different users and the coperation under different users. 34. <td></td> <td></td> <td></td> <td>Implement linear data structures such as stacks, queues using</td>				Implement linear data structures such as stacks, queues using
28. 20CSC11 Data Structures Lab Implement non-linear data structures such as trees, graphs 29. 20CSC12 Fundamentals of Data Science Lab Understand the significance of data science tools. 29. 20CAC02 Fundamentals of Data Science Lab Understand the significance of data science tools. 30. 20CAC01 Fundamentals of Data Science Lab Analyze the significance of Inferential Statistics. 30. 20CAC101 MOOCS / Training / Internship On successful completion of this course, Student will be able to: Internship 31. 20ACT Activity Points Analyze the coefficient of skewness and fitting of the data by various schedus distributions 33. 20CSC13 Mathematical Foundation for Data Science & Security Analyze the coefficient of skewness and fitting of the data by various schedus distributions. 33. 20CSC13 Computer Architecture and Microprocessor Mathematical Foundation for Data Science & Security 34. 20CSC14 Data Base Management Systems Understand the functional block diagram of single base distributions and analyse the various methods distributions and analyse the significance of Interface. 34. 20CSC14 Data Science & Security Analyze the coefficient of skewness to memory and cache computer and discrivision and IO device i				array and linked list.
28. 20CSC11 Data Structures Lab Analyze various adjorithms of linear and nonlinear data structures. Design and develop real world problem using suitable data structures. 29. 20CAC02 Fundamentals of Data Science Lab Analyze the significance of data science tools. Apply statistical methods to implement functionalities in Numpy, Scipy, Pandas packages. Analyze the significance of Infernatial Statistics. Apply Exploratory Data Analytical Techniques to visualize significance of Time Series Forecasting. 30. 20CA101 MOOCs / Training / Internship On successful completion of this course, Student will be able to: Analyze the significance of Time Series Forecasting. 31. 20ACT Activity Points Analyze the coefficient of skewness and fitting of the data by various methods. 32. 20MTC13 Mathematical Foundation for Internship Analyze the coefficient of skewness and fitting of the data by various distributions. 33. 20CSC13 Computer Architecture and Microprocessor Computer Architecture and Microprocessor Computer Architecture and Microprocessor Devise flowed analyze its operation by interfacing with de CPU. 34. 20CSC14 Data Base Management Systems Classify the difference between FMS and DBMS; describe the roles of different users and the structure of the DBMS Design the database logically using ER modeling. 34. 20CSC14 Data Base Management Systems Classify the difference between FMS				Implement non-linear data structures such as trees, graphs
33. 20CSC13 Computer Architecturates Microprocessor Analyze various algorithms of linear and nonlinear data structures. Design and develop real world problem using suitable data structures. 34. 20CSC14 Fundamentals of Data Science Lab Analyze the significance of Inferential Statistics. Apply Statistical Techniques to visualize Single variable Analyze the significance of Time Series Forecasting. 30. 20CA101 MOOCS / Training / Internship On successful completion of this course, Student will be able to: Internship 31. 20ACT Activity Points Analyze the significance of Time Series Forecasting. 32. 20MTC13 Mathematical Foundation for Data Science & Security Analyze the coefficient of skewness and fitting of the data by various distributions. 33. 20CSC13 Computer Architecture Microprocessor Analyze the coefficient of skewness and fitting of the data by various distributions. 34. 20CSC14 Data Science & Security Analyze the coefficient of skewness and fitting of the data by various distributions. 34. 20CSC14 Data Science & Security Analyze the coefficient of skewness and fitting of the data by various distributions. 34. 20CSC14 Data Base Management Microprocessor Computer Architecture and Microprocessor 34. 20CSC	28.	20CSC11	Data Structures Lab	Analyze various sorting techniques

			Rows for Update, Creating Password and Security features
			Variables, Anchored Declarations, Assignment Operation and
			PL/SQL code using Control Structures

			Develop PL/SQL code using Cursors, Exception, Composite
			Identify and install web development tools
			Develop client side web pages using XHTML CSS and XML
		r	Create dynamic interactive web applications using java script
40.	20CSC18	Internet and web	Develop server side web application using Diango Frame work
		lechnologies Lab	Lederstanding working of Aigy Node is and ISON
			Understanding working of Ajax, Node. Is and JSON
			Identify and explore different frame works for web applications
41.	20ACT	Activity Points	-
			Identify and apply asymptotic notations to measure the performance of algorithms.
			Describe the algorithmic design techniques of divide and
			conquer, greedy, dynamic programming, backtracking and
			branch and bound to solve problems.
		Design and Analysis of	Apply suitable algorithmic design techniques to solve problems
.42.	20CSC12	Algorithms	to get optimal solution.
		Aigorianiis	Analyze the performance of algorithmic design techniques.
			Evaluate the efficiency of alternative solutions derived for a
			problem by applying various algorithmic design techniques
			Understand P NP NP-Hard NP-Completeness and
			Reducibility
			Identify the basics of an operating systems and its major
			components
			Understand the concepts related to process synchronization and
			deadlocks.
			Distinguish various memory management techniques
43.	20CSC20	Operating Systems	Interpret various threats and defense mechanisms used to protect
			the system.
			Evaluate various file allocation methods
			Apply security as well as recovery features in the design of
			algorithms.
			State the software process and explain perspective process
			model, evolutionary process models
			Understand the agile Software process models and demonstrate
			the skills necessary to specify the requirements of software
			product so as to prepare SRS document.
14	2005022	Software Englished	Recall the modeling concepts and estimate the cost of software
44.	2003022	Software Engineering	using empirical models
			Enlist the design principles and construct a product using coding
			principles and standards.
			Develop test cases and apply software testing methods in
			conventional and O-O approaches and estimates software
			quality of SW.
			Define the basic concepts related to Machine Learning
	1		Recognize the underlying mathematical relationships across MI
			algorithms and their paradigms.
15	2001.001		Determine the various applications of Machine Learning
45.	20CAC04	Machine Learning	Model, design and develop solutions to real world problems
		1	using Machine Learning Algorithms
			Evaluate and interpret the results of the various machine
			learning tools
			Create a computer simulation based on the physical
			characteristics of the system
			Solve ordinary and partial differential equations with
46	20CSE03	System Modeling and	computational methods
	2000000	Simulation	Display insight into the uncertainting in a surface and here it
			can be characterized
			Manipulate the data to a second
			manipulate the data structures of numerical computing

			matrices, and vectors, and visually represent data sets coming from computer simulations
			Understand the basics of embedded systems.
			Analyze the core concepts of Embedded System and Embedded
			System Architecture.
And any second			Design and develop Embedded System hardware and software
47.	20CSE12	Embedded Systems	using Embedded C.
			Analyze the operating system for embedded systems
			Analyze the embedded system development environment and
			tools used in embedded software development process.
			Understand the significance of Blockchain technology and its
			associated components
	_		Understand the need for consensus protocols in Blockchain
40	2005524	Blockchain Technology	Experience the Ethereum and Hyperledger Fabric Platforms
48.	2003624	Blockenam reemetegy	Incorporate Blockchain in financial software Systems and
			supply chain environments.
			Devise the need for Blockchain in Government sectors
			Understand the significance of Blockchain Security
			Understand the structure of models and theories of numan
			computer interaction.
			Understand the vision of a computer user.
			Understand the recognition and remembrance limitations of a
47.	20CSE26	Human Computer	Understand and analyze the mobile ecosystem and tools for
		Interaction	mobile design
			Design an interactive mobile interfaces for mobile applications
			and widgets
L			Design an interactive web interface for web applications.
			Illustrates various elements of reinforcement techniques.
			Define the key features of reinforcement learning that
			distinguishes it from AI and non-interactive machine learning
			Analyze any given application; decide if it is formulated as
48.	20CAE01	Reinforcement Learning	reinforcement learning problem
			Apply Monte Carlo method and Temporal-Difference(TD)
	-		learning for prediction
			Apply Planning and Learning with Tabular Methods.
			Use Value Prediction with Function Approximation concepts.
			Explain the basic principles of image processing and its
			significance in real world
			Interpret various types of images and applies image
			transformations.
10	200 4 502	Divited I and D	Evaluate various approaches for image segmentation and image
47.	ZUCALUZ	Digital image Processing	Pestoration
			Define image processing methods and recognize morphological
			Image processing techniques
			Recognize image compression and comprehend image
			A poly image arrange in both domains
			Apply image processing algorithms for real world problems.
			Balate the collular concerts like 6
			coverage and capacity
			Analyse the mobile radio propagation with here a least 1
50.	20ECO10	Fundamentals of Wireless Communication	scale fading

			Explain the Hazardous Waste Management and Treatment
			process.
			mitigation and control
			Interpret the Biological Treatment of Solid and Hazardous
			Waste
			Identify the waste disposal options, describe the design and
			construction, Operation, Monitoring, Closure of Landfills
			Understand Organizational Behavioral principles and practices.
			Compare various organizational designs and cultures enabling
			organizational development.
			employee's problems and decision making processes
52.	20MEO09	Organizational Behaviour	Understand the group dynamics, communication network, skills
			needed to resolve organizational conflicts.
			Analyze the behavior, perception and personality of individuals
			and groups in organizations in terms of the key factors that
			influence organizational behavior.
	1		Compute basic mathematical operations on Quantum bits
			Execute Quantum operations of Quantum computing
53.	20MTO03	Quantum Computing	Built quantum programs
			Develop the quantum algorithm
			Explain the basic concepts of biology and bioinformatics
			Identify various types of biological databases used for the
			retrieval and analysis of the information
54	2007004	Bioinformatics	Explain the sequence analysis and data mining
54.	2081004	Biointormatics	Discuss the methods used for sequence alignment and
			construction of the phylogenetic tree.
			Describe the methods used for gene and protein structure
			Implement greedy, dynamic programming, hashtashi
			branch and bound techniques
		Design and Analysis of	Demonstrate various algorithmic design techniques
55	20CSC16	Algorithms Lab	Analyze the performance of various algorithms
		ingontinins Lab	Compare various design strategies
			Formulate solutions to solve real world problems use acquired
			knowledge
			Understand Linux/Unix environment.
			Identify and interpret various system programs.
56.	20CSC23	Operating Systems Lab	Simulate memory and implement shell programming.
		operating bystems Lab	Analyze process and file more sense to all other the sense of the sens
			and/or modifying concurrent programs
			Build network-oriented applications using system calls
			Identify the problem scope and constraints in the problem
			Prepare software requirements specifications (SRS) for the
			system according to standards.
		Case Studies Lab using	Apply the design notations of structured approach to develop
57.	20CSC25	UML	ER and Data Flow Diagrams.
			Apply/Use the design notations of OO approach to develop
			UML diagrams using rational tools.
			proposed system

58.	20CAC05	Machine Learning Lab	Identify and utilize modern tools that are useful for data and
			. Recognize and implement various wave of coloring with the
			suitable

			model parameters for different machine learning techniques
			Implement and evaluate various Machine Learning approaches
			Apply Keras and Tensorflow to implement ML techniques
59.	20CAI02	Internship-II (Industrial/ Rural Internship)	
			Learn the communication protocol suites like ISO-OSI and TCP/IP
			Illustrate and explain Data Communications System and its
		Data Communication and	Identify and analyze various congestion control algorithms
60.	20CSC21	Computer Networks	Distinguish the internet protocols like IP, ARP, ICMP, IGMP, routing protocols and DHCP
			Understand the transport layer protocols like TCP, UDP, RTCP.
			Identify various application layer protocols like HTTP, WWW,
			DNS, Email Protocols, FTP and the underlying protocols.
			Understand various optimization techniques used in deep learning.
			Analyze various Autoencoders and Regularization Techniques.
	200 4 006	Deen Learning for Computer	Design and Develop various Convolution Neural Networks architectures.
61.	2004000	Vision	Design various RNNs and Encoder Decoder Models.
			Understand the importance of GANs to develop real-time
			applications
			Evaluate the Performance of different models for deep neural
			network training
			to recognize the languages
			Analyze the concept compilation Process and data structures of
			a compiler
	20CIC07	Theory of Computation &	Attains the knowledge of context free grammars and able to
62.			implement parsers
		compilers	Design Syntax directed translation scheme for a given Context
			free grammar and generation of intermediate code.
			Apply Optimization to intermediate code and machine code
			compiler
			Analyze and design classical encryption techniques and block
			ciphers.
			Analyze and design hash and MAC algorithms, and digital
		Cryptography and Network	signatures.
63.	20CSC30	C30 Security	Design network application security schemes like PGP, S/MIME, IPSec, SSL, TLS, HTTPS, SSH, etc
			Evaluate the authentication and hash algorithms
			Create and configure simple firewall architectures.
			Understand digital sign in emails and files.
			Understand various soft computing concepts and techniques.
			Analyze and design various learning models.
			Apply the neural network architecture for various real time
64.	20CSE06	Soft Computing	applications.
			Design genetic algorithms for various and list
			Develop soft computing techniques to solve different
			applications.
			Understand IoT, its hardware and software components
			Comprehend I/O interface and programming APIs
65.	20CSE07	20CSE07 Internet of Things	Analyze the use of communication protocols in IoT.
			Explore Solution framework for IoT applications
			Illustrate unstructured data storage

			Develop real time IoT based projects.
			Understand the basic concepts of Natural language processing
			pipeline and applications of NLP.
			Illustrate various text representation techniques in NLP.
	20000011	Natural Language	Analyse text classification techniques and deep learning basics
66.	20CSETT	Processing	to process natural language text.
		. –	Explore text summarization methods and example systems.
			Demonstrate levels of NLP for several case studies
			Apply NLP Pipe lines to solve real world applications.
			Recognize the basics of computer vision and its challenging
			issues.
			Develop algorithms to analyze feature detection and alignment.
			Interpret images and videos for problems such as tracking and
67.	20CAE03	Computer Vision	structure from motions.
		1992 -	Identify object, scene recognition and categorization algorithms
			for real time images.
			Analyze recovery of 3D structure of III-posed scenes.
			Apply various techniques to build computer vision applications.
			Laculate the optimum values for given objective function by
			LPP Solve the solution for maximize the profit with minimum cost
			by Transportation problem
			Determine the ontimum feasible solution for assignment and

		KNOWELDGE	Acquire the information about the fine arts in India
			Know the contribution of scientists of different eras.
			Understand the phases of the software development life cycle.
			Examine the different version control systems.
			Recognize the importance of the build and deployment tools and
99	20CSE19	DEVOPS LAB	test the software application
			Deployment of application in production environment.
			Summaries the software configuration management.
			Summaries the software configuration management.
			Apply System Commands and Networking commands of Linux
		WOULDED FORMANCE	Describe OpenMP constructs and functions.
100	20CSE40	HIGH PERFORMANCE	Design and implement parallel programs using OpenMP
100.		COMPUTING LAB	Apply the APIs in MPI programming.
		-	Design and implement parallel programs using CUDA.
			Identify the Foot Printing Tools for Information Gathering.
			Explore the Tools for scanning and scrutinizing the gathered
2.7		OVDED SECURITY I AP	information.
101	20CSE39	CIBER SECORITI LAB	Demonstrate the usage of Sniffer Tools.
			Examine Attack Launching Tools.
			Analyze the security issues and vulnerability in Email system
			Prepare database connections with application servers
			Design user interfaces using ReactJS
		ENTERPRISE	Construct strong expertise on Express framework to develop
102.	20CSE17	APPLICATION	responsive web applications.
		DEVELOPMENT LAB	Create server side applications using Node.js
			Develop SPA using Angular 2
			Invent next culture-shifting web applications
			Understand the significance of bigdata and frameworks
			associated with it.
-	20CAE13		Implement real-world use cases through hadoop framework.
103		BIG DATA	Implement Map reduce programming model
105.		FRAMEWORKS LAB	Deploy Sqoop and Hive queries
			Deploy Apache Spark and Apache SOL functionalities
			Implement real world applications using NoSOL databases such
			as MongoDB.
			Study and review research papers of new field/areas and
			summarize them
			Identify promising new directions of various cutting edge
			technologies in Computer Science and Engineering
104.	20CAC09	TECHNICAL SEMINAR	Impart skills to prepare detailed report describing the colored
			topic/area
			Acquire skills to write technical papers/articles for multi-
			Effectively communicate by making an oral procentation.
			the evaluating committee
			Review the literature related to the problem of the transfer
			Undertake problem identification formulation in the selected topic.
			Prepare synopsis of the selected to i
			Gather the required data and Suit
105.	20CAC10	PROJECT PART- 1	implementation
			Conduct evaluation
			Communicate the week of a standard simulation experiment.
			Communicate the work effectively in both oral and written
			IOFINS.

106.	20CA103	INTERNSHIP - III	
			Identify different motion planning schemas under different environments
			Define different states and have mathematical knowledge on
			different techniques for drop-off and estimation algorithms
		PLANNING AND	Analyze different planning and decision techniques
107.	20CAE09	AUTONOMOUS	Appraise different methods to solve finite Markov decision problem
		SYSTEMS	Distinguish different decision making techniques under
		-	uncertain environment
			Apply different information gathering techniques and associate Human-robot interaction
			Understand the fundamentals of computational neuroscience
			Analyse the Neural Encoding Models.
		COMPLITATIONAL	Make use of Neurons & Neural coding to extract information
108.	20CAE10	NEUROSCIENCE	Analyse the Computing in Carbon and Computing with Networks
			Analyze the various learning methodologies
			Evaluate the Performance of different neurological models
			Explain how the humans interact with computers.
-			Understand the design and implementation of the technologies
			for AR & VR systems
110	20CSE35	AUGMENTED REALITY	Apply technical and creative approaches to make successful
110.	20050555	AND VIRTUAL REALITY	applications and experiences
			Design audio and video interaction paradigms
			Understand AR&VR best practices
			Identify and examine the system and notworking a dministry.
			tools and commands
	20CAE11		Describe different addressing and configure DHCP server
		NETWORK AND SYSTEM	Configure various services like mail ftn web hosting and
111.		ADMINISTRATION	security, and use remote administration tools
			Analyze the DNS server and illustrate the web and proxy server
			Evaluate and configure the User and system security tools
			Write scripts to automate the system administration process
112.	20CAE12	Parallel Computing	
			Identify the natural resources and realise the importance of
			water, food, forest, mineral, energy, land resources and affects
1		CEM01 ENVIRONMENTAL SCIENCE	of over utilisation.
			Understand the concept of ecosystems and realise the
113	20CEM01		importance of interlinking of food chains.
115.	ZUCEMUI		Contribute for the conservation of bio-diversity
			Suggest suitable remedial measure for the problems of
			environmental pollution and contribute for the framing of
			Follow the environmental athles and a till
			and management of environmental disenters
			Understand the difference between "Sen" of the
			able to explain socially constructed theories of identity
			Recognize shifting definitions of "Map" and "Warraw"
			relation to evolving notions of "Masculinity" and "Femininity"
		GENDER	Appreciate women's contributions to society historically
114.	20EGMO4	SENSITIZATION	culturally and politically.
			Analyze the contemporary system of privilege and oppressions
			with special attention to the ways gender intersects with race
			class, sexuality, ethnicity, ability, religion, and nationality
			Demonstrate an understanding of personal life, the workplane
			the community and active civic engagement through classroom

			learning
115.	20CAC11	PROJECT:PART – 2	Demonstrate a sound technical knowledge of their selected topic. Design engineering solutions to complex problems utilizing a systematic approach Conduct investigations by using research-based knowledge and methods to provide valid conclusions. Create/select/use modern tools for the modelling, prediction and understanding the limitation of complex engineering solutions. Communicate with engineers and the community at large in written and oral forms. Demonstrate the knowledge, skills and attitudes of a professional engineer.
