LINEAR ALGEBRA AND CALCULUS (CSE, CSE(AI&ML), CSE(IOT & Cyber Security including Block Chain Technology), IT, AI&ML, AI&DS)

Instruction Duration of SEE SEE CIE Credits 3 L+1T Hours per week 3 Hours 60 Marks 40 Marks 4

Course Objectives:

- 1. To explain the Partial Derivatives and the extreme values of functions of two variables.
- 2. To discuss Physical interpretations of scalar and vector functions.
- 3. To discuss vector line, surface and volume integrals.
- 4. To explain the concepts of basis, dimension of vector space and matrix representation of a linear transformation.
- 5. To explain the solution of system of linear equations by Matrix Methods.

Course Outcomes:

Upon completing this course, students will be able to:

- 1. Determine the extreme values of functions of two variables.
- 2. Apply the vector differential operator to scalar and vector functions
- 3. Solve line, surface & volume integrals by Greens, Gauss and Stoke's theorems.
- 4. Determine the basis and dimension of a vector space, compute linear transformation.
- 5. Apply the Matrix Methods to solve the system of linear equations

UNIT-I

Partial Differentiation and Its Applications: Functions of two or more variables, Partial derivatives, Higher order partial derivatives, Total derivative, Differentiation of implicit functions, Jacobians, Taylor's expansion of functions of two variables, Maxima and minima of functions of two variables.

UNIT-II

Vector Differential Calculus and multiple Integrals: Scalar and Vector point functions, vector operator Del, Gradient, Directional derivative, Divergence, Curl, Del applied twice to point functions, Del applied to product of point functions (vector identities), Irrotational fields and Solenoidal fields, Double integral, Change of order of integration and Triple integrals.

UNIT-III

Vector Integral Calculus: Line integral, Surface integral and Volume integral. Verification of Green's theorem in a plane (without proof), verification of Stroke's theorem (without proof) and Gauss's divergence theorem (without proof).

UNIT-IV:

Vector space: Vector space, Subspace, linear combination of vectors, linear span, row and column spaces, linear dependent, independent vectors, basis, dimension, linear transformation, invertible transformation, matrix of linear transformation, kernel and range of LT, rank and nullity of LT-rank nullity theorem(without proof), change of basis.

UNIT-V

Matrices: Rank of a matrix, Echelon form, consistency of linear System of equations, Eigen values, Eigenvectors, Properties of Eigen values, Cayley-Hamilton theorem, Quadratic forms, Reduction of quadratic form to canonical form by linear transformation, Nature of quadratic form.

Text Books:

- 1. B.S. Grewal, Higher Engineering Mathematics, KhannaPublishers,44th Edition, 2017.
- 2. Erwin kreyszig, Advanced Engineering Mathematics, 9th Edition, John Wiley & Sons, 2006.
- 3. Seymour Lipschutz, Schaum's Outline of Linear Algebra, 5th Edition, McGraw Hill, 2013.

4. Gilbert Strang, Introduction to linear algebra, 5th Edition, Wellesley - Cambridge press, 2016.

Suggested Reading:

- 1. Veerarajan T., Engineering Mathematics for first year, Tata McGraw-Hill, New Delhi, 2008.
- 2. R.K. Jain, S.R.K. Iyengar, Advanced Engineering Mathematics, Narosa Publications, 5th edition, 2016.
- 3. D. Poole, Linear Algebra: A Modern Introduction, 2nd Edition, Brooks/ Cole, 2005.
- 4. Kuldeep Singh, Linear algebra: step by step. OUP Oxford, 2013.

22PYC01

OPTICS AND SEMICONDUCTOR PHYSICS (CSE, IT, CSE(AI&ML), CSE(IoT & Cyber Security including Block Chain Technology), AI&ML, AI&DS)

Instruction Duration of SEE SEE CIE Credits 3L Hours per week 3Hours 60Marks 40Marks 3

Course Objectives: The objectives of the course is to make the student

- 1. Understand the fundamentals of wave nature of flight
- 2. Acquire knowledge of lasers, holography and fiber optics
- 3. Familiarize with quantum mechanics
- 4. Learn the fundamental concepts of solids

Course Outcomes: At the end of the course, the student will be able to

- 1. Demonstrate the physical properties of light.
- 2. Explain characteristic properties of lasers and fiber optics
- 3. Find the applications of quantum mechanics
- 4. Classify the solids depending upon electrical conductivity
- 5. Identify different types of semiconductors

UNIT-I

Wave Optics: Huygens' principle –Superposition of waves –Interference of light by wave front splitting and amplitude splitting–Fresnel's biprism – Interference in thin films in reflected light–Newton's rings– Fraunhofer diffraction from a single slit –Double slit diffraction – Rayleigh criterion for limit of resolution– Concept of N-slits–Diffraction grating and its resolving power.

UNIT-II

Lasers & Holography: Characteristics of lasers – Einstein's coefficients –Amplification of light by population inversion –Different types of lasers: solid-state lasers: Ruby & Nd:YAG; gas lasers: He-Ne & CO₂; semiconductor laser –Applications of lasers in engineering and medicine. Holography: Principle – Recording and reconstruction–Applications.

Fiber Optics: Introduction –Construction –Principle –Propagation of light through an optical fiber – Numerical aperture and acceptance angle –Step-index and graded-index fibers –Pulse dispersion –Fiber losses--Fiber optic communication system –Applications.

UNIT-III

Principles of Quantum Mechanics: Introduction –Wave nature of particles – de-Broglie hypothesis – Physical significance of ψ –Time-dependent and time-independent Schrodinger equations – Born interpretation – Probability current –Wave packets –Uncertainty principle – Particle in infinite square well potential –Scattering from potential step – Potential barrier and tunneling.

UNIT-IV

Band Theory of Solids: Salient features of free electron theory of metals (Classical and Quantum) – Fermi level –Density of states – Bloch's theorem for particles in a periodic potential – Kronig-Penney model – Classification of solids: metals, semiconductors and insulators.

UNIT-V

Semiconductors: Intrinsic and extrinsic semiconductors –Charge carrier concentration in intrinsic semiconductors –Dependence of Fermi level on carrier concentration and temperature in extrinsic semiconductors (qualitative) –Carrier generation and recombination –Carrier transport: diffusion and drift – P-N junction – Thermistor – Hall effect – LED –Solar cell.

22CSC01

PROBLEM SOLVING AND PROGRAMMING

Instruction	2L+IT Hours per
week	
Duration of SEE	3 Hours
SEE	60 Marks
CIE	40 Marks
Credits	3

Course Objectives: The objectives of this course are to:

- 1. Develop logical skills and basic technical skills so that students should be able to solve basic computational problems.
- 2. Learn any basic programming language.

Course Outcomes: After completion of course, students would be able to:

- 1. Understand real world problems and develop computer solutions for those problems.
- 2. Understand the basics of Python.
- 3. Apply Python for solving basic programming solutions.
- 4. Create algorithms/flowcharts for solving real-time problems.
- 5. Build and manage dictionaries to manage data
- 6. Handle data using files

UNIT I:

Introduction to Programming - Evolution of languages: Machine, Assembly and High-level languages. Software requirements for programming: OS, compiler, linker, loader, editor. Design specification: Algorithms and Flowcharts.

UNIT II:

Data Types and Operators, Variable, Sequences and Iteration - Data types, Expressions, Precedence Rules, Operators: arithmetic, relational, logical, bit-wise and miscellaneous operators; local variable, global variables, List, String, Tuples, Sequence mutation and accumulating patterns.

UNIT III:

Conditional Statement, Loops, Arrays and Strings, user-defined Data Types -if..else, for, while, nested iteration, Concept and use of arrays, declaration and usage of arrays, 2-dimensional arrays, different types of user defined data types.

UNIT IV:

Dictionaries and Dictionary Accumulation, Functions/Methods - Dictionary basics, operations, methods, accumulation, advantages of modularizing program into functions, function definition and function invocation. Positional parameters passing arrays to functions, recursion, library functions.

UNIT V:

File Handling and Memory Management - Concepts of files and basic file operations, writing/reading data to/from a .csv file, Memory Management Operations.

Text Books and References:

- 1. R.S. Salaria, Khanna, "Programming for Problem Solving", Book Publishing Co., Delhi.
- 2. Jeeva Jose, Khanna, "Taming Python by Programming", Book Publishing Co., Delhi.
- 3. Mark Lutz, "Learning Python", 5th Edition, , O'Reilly Media, Inc.,
- 4. Python Crash Course: A Hands-On, Project-Based Introduction to Programming by No Starch Press.
- 5. Eric Matthes,, "Programming in Python", R.S. Salaria, Khanna Book Publishing Co., Delhi.
- 6. https://www.coursera.org/specializations/python-3-programming.

NPTEL/SWAYAM Course:

1. Introduction to Problem Solving and Programming, Video Lectures, Prof. D Gupta , IIT Delhi.

Problem Solving Aspects and Python Programming, Dr. S Malinga, Dr Thangarajan, Dr. S V Kogilavani, Kongu Engineering College.

22EGC01

ENGLISH

(Common to All Branches)

Instruction	2L Hours per week
Duration of SEE	3Hours
SEE	60 Marks
CIE	40 Marks
Credits	2

Course Objectives: This course will introduce the students:

- 1. To the role and importance of communication while developing their basic communication skills in English.
- 2. To basics of writing coherent paragraphs and formal emails.
- 3. To techniques of writing a précis and formal letters by using acceptable grammar and appropriate vocabulary.
- 4. To description, definition and classification of processes while enabling them to draft formal reports following a proper structure.
- 5. To gaining adequate reading comprehension techniques.

Course Outcomes: After successful completion of the course the students will be able to:

- 1. Illustrate the nature, process and types of communication and communicate effectively without barriers.
- 2. Construct and compose coherent paragraphs, emails and adhering to appropriate mobile etiquette.
- 3. Apply techniques of precision to write a précis and formal letters by using acceptable grammar and appropriate vocabulary.
- 4. Distinguish formal from informal reports and demonstrate advanced writing skills by drafting formal reports.
- 5. Critique passages by applying effective reading techniques

UNIT-I

Understanding Communication in English:

Introduction, nature and importance of communication; Process of communication; Types of communication - verbal and non-verbal; Barriers to communication; Intrapersonal and interpersonal communication; Understanding Johari Window.

Vocabulary & Grammar: The concept of Word Formation; Use of appropriate prepositions and articles.

UNIT-II

Developing Writing Skills I:

Paragraph writing. – Structure and features of a paragraph; Cohesion and coherence. Rearranging jumbled sentences. Email and Mobile etiquette.

Vocabulary & Grammar: Use of cohesive devices and correct punctuation.

UNIT-III

Developing Writing Skills II:

Précis Writing; Techniques of writing precisely. Letter Writing – Structure, format of a formal letter; Letter of request and the response

Vocabulary and Grammar: Subject-verb agreement. Use of prefixes and suffixes to form derivatives. Avoiding redundancies.

UNIT-IV

Developing Writing Skills III:

Report writing – Importance, structure, elements of style of formal reports; Writing a formal report.

Vocabulary and Grammar: Avoiding ambiguity - Misplaced modifiers. Use of synonyms and antonyms.

UNIT-V

Developing Reading Skills:

The reading process, purpose, different kinds of texts; Reading comprehension; Techniques of comprehension – skimming, scanning, drawing inferences and conclusions.

Vocabulary and Grammar: Words often confused; Use of standard abbreviations.

Text Books:

1. Language and Life: A Skills Approach, Board of Editors, Orient Black Swan, 2017.

2. Swan Michael, Practical English Usage. OUP. 1995.

Suggested Readings:

1. Wood F.T, Remedial English Grammar, Macmillan, 2007

2. Zinsser William, On Writing Well, Harper Resource Book, 2001

Sanjay Kumar and PushpLata, Communication Skills. Oxford University Press, 2011.

22PYC03

OPTICS AND SEMICONDUCTOR PHYSICS LAB (CSE, IT, CSE(AI&ML), CSE(IoT & Cyber Security including Block Chain Technology), AI&ML, AI&DS)

Instruction	3P Hours per week
Duration of SEE	3Hours
SEE	50Marks
CIE	50Marks
Credits	1.5

Course Objectives: The objectives of the course is to make the student

- 1. Apply theoretical physics knowledge in doing experiments
- 2. Understand the behaviour of the light experimentally
- 3. Analyze the conduction behaviour of semiconductor materials and optoelectronic devices

Course Outcomes: At the end of the course, the student will be able to

- 1. Interpret the errors in the results of an experiment.
- 2. Demonstrate physical properties of light experimentally
- 3. Make use of lasers and optical fibers for engineering applications
- 4. Explain the V-I characteristics of some optoelectronic and semiconductor devices
- 5. Find the applications thermistor

Experiments:

1.	Error Analysis	:	Estimation of errors in the determination of time period of a torsional pendulum
2.	Fresnel's Biprism	:	Determination of wavelength of given monochromatic source
3.	Newton's Rings	:	Determination of wavelength of given monochromatic source
4.	Single Slit Diffraction	:	Determination of wavelength of given monochromatic source
5.	Diffraction Grating	:	Determination of wavelengths of two yellow lines of light of mercury lamp
6.	Laser	:	Determination of wavelength of given semiconductor laser
7.	Holography	:	Recording and reconstruction of a hologram
8.	Optical Fiber	:	Determination of numerical aperture and power losses of given optical fiber
9.	Energy Gap	:	Determination of energy gap of given semiconductor
10.	P-N Junction Diode	:	Study of V-I characteristics and calculation of resistance of given diode in forward bias and reverse bias
11.	Thermistor	:	Determination of temperature coefficient of resistance of given thermistor
12.	Hall Effect	:	Determination of Hall coefficient, carrier concentration and mobility of charge carriers of given semiconductor specimen
13.	LED	:	Study of I-V characteristics of given LED
14.	Solar Cell	:	Study of I-V characteristics of given solar cell and calculation of fill factor, efficiency and series resistance
15.	Planck's Constant	:	Determination of Planck's constant using photo cell

NOTE: A minimum of TWELVE experiments should be done.

22EGC02

ENGLISH LAB

(Common to All Branches)

Instruction	2P Hours per we
Duration of SEE	3 Hours
SEE	50 Marks
CIE	50 Marks
Credits	1

Course Objectives: This course will introduce the students:

- 1. To nuances of Phonetics and give them sufficient practice in correct pronunciation.
- 2. To word stress and intonation.
- 3. To listen to listening comprehension material for honing their listening skills.
- 4. To activities enabling them overcome their inhibitions while speaking in English with the focus being on fluency rather than accuracy.
- 5. To team work, role behavior while developing their ability to discuss in groups and making oral presentations.

Course Outcomes: After successful completion of the course the students will be able to:

- 1. Define the speech sounds in English and understand the nuances of pronunciation in English
- 2. Apply stress correctly and speak with the proper tone, intonation and rhythm.
- 3. Analyze listening comprehension texts to enhance their listening skills.
- 4. Determine the context and speak appropriately in various situations.
- 5. Design and present effective posters while working in teams ,and discuss and participate in Group discussions.
- Introduction to English Phonetics: Introduction to auditory, acoustic and articulatory 1. phonetics, organs of speech: the respiratory, articulatory and phonatory systems.
- Sound system of English: Phonetic sounds and phonemic sounds, introduction to 2. international phonetic alphabet, classification and description of English phonemic sounds, minimal pairs. The syllable: types of syllables, consonant clusters.
- Word stress: Primary stress, secondary stress, functional stress, rules of word stress. 3
- Rhythm & Intonation : Introduction to Rhythm and Intonation. Major patterns, 4 intonation of English with the semantic implications.
- **Listening skills** Practice with Software available in (K-van solutions) 5.
- **Public speaking** Speaking with confidence and clarity in different contexts on various 6. issues.
- **Group Discussions** Dynamics of a group discussion, group discussion techniques, 7. body language.
- **Pictionary** weaving an imaginative story around a given picture. 8.
- **Information Gap Activity** Writing a brief report on a newspaper headline by building 9 on the hints given
- 10. **Poster presentation** Theme, poster preparation, team work and representation.

Suggested Reading

- 1. T Balasubramanian. A Textbook of English Phonetics for Indian Students, Macmillan,2008.
- 2. J Sethi et al. A Practical Course in English Pronunciation (with CD), Prentice Hall India.2005.

22CSC02

PROBLEM SOLVING AND PROGRAMMING LAB

Instruction	3P Hours per week
Duration of SEE	3 Hours
SEE	50 Marks
CIE	50 Marks
Credits	1.5

Course Objectives: The objectives of this course are to:

- 1. Master the fundamentals of writing Python scripts
- 2. Learn Python elements such as variables, flow controls structures, and functions
- 3. Discover how to work with lists and sequence data, and files

Course Outcomes: After completion of course, students would be able to:

- 1. Understand various Python program development Environments
- 2. Demonstrate the concepts of Python.
- 3. Implement algorithms/flowcharts using Python to solve real-world problems.
- 4. Build and manage dictionaries to manage data.
- 5. Write Python functions to facilitate code reuse.
- 6. Use Python to handle files and memory.

Laboratory / Practical Experiments:

- 1. Explore various Python Program Development Environments.
- 2. Demonstration of input/output operations
- 3. Demonstration of operators
- 4. Demonstration of selective control structures
- 5. Demonstration of looping control structures
- 6. Demonstration of Python Dictionaries.
- 7. Implementation of searching and sorting techniques.
- 8. Implementation of string manipulation operations
- 9. File handling and memory management operations

Text Books and References:

- 1. R.S Salaria, Khanna, (Programming for Problem Solving", Book Publishing Co., Delhi
- 2. Jeeva Jose, Khanna,, "Taming Python by Programming", Book Publishing Co., Delhi

22MEC01

CAD AND DRAFTING

Instruction Duration of SEE SEE CIE Credits 1 T + 3 D Hours per week 3Hours 50Marks 50Marks 2.5

Course Objectives:

- 1. To get exposure to a cad package and its utility.
- 2. Understanding orthographic projections.
- 3. To visualize different solids and their sections in orthographic projection
- 4. To prepare the student to communicate effectively by using isometric projection.
- 5. To prepare the student to use the techniques, skills, and modern tools necessary for practice.

Outcomes: At the end of the course, the Students are able to

- 1. Become conversant with appropriate use of CAD software for drafting.
- 2. Recognize BIS, ISO Standards and conventions in Engineering Drafting.
- 3. Construct the projections of points, lines, planes, solids
- 4. Analyse the internal details of solids through sectional views
- 5. Create an isometric projections and views

List of Exercises:

- 1. Introduction to CAD package: Settings, draw, modify tools, dimensioning and documentation
- 2. Construction of Conic Sections by General method
- 3. Orthographic projection: Principles, conventions, Projection of points
- 4. Projection of straight lines: Simple position, inclined to one plane
- 5. Projection of straight lines inclined to both the planes (without traces and mid-point)
- 6. Projection of planes: Perpendicular planes
- 7. Projection of planes: Oblique planes
- 8. Projection of solids: Simple position
- 9. Projection of solids: Inclined to one plane
- 10. Sections of solids: Prism, pyramid in simple position
- 11. Sections of solids: Cone and cylinder in simple position
- 12. Isometric projections and views
- 13. Conversion of isometric views to orthographic projections and vice-versa.

Text Books:

- 1. N.D.Bhatt, "Elementary Engineering Drawing", Charotar Publishers, 2012.
- 2. K.Venugopal, "Engineering Drawing and Graphics + AutoCAD", New Age International Pvt.Ltd, 2011.
- 3. Basanth Agrawal and C M Agrawal, "Engineering Drawing", 2/e, McGraw-Hill Education (India) Pvt.Ltd.

Suggested Reading:

- 1. Shaw M.B and Rana B.C., "Engineering Drawing", 2/e, Pearson, 2009.
- 2. K.L. Narayana and P.K. Kannaiah, "Text Book of Engineering Drawing", Scitech Publications, 2011.

22 MEC38

DIGITAL FABRICATION LAB

Instruction	3P Hours per week
Duration of SEE	3 Hours
SEE	50 Marks
CIE	50 Marks
Credits	1.5

Objectives: The objectives of this course are to:

- 1. Give a feel of Engineering Practices & develop holistic understanding of various Engineering materials and Manufacturing processes.
- 2. Develop skills of manufacturing, safety, precision, quality, intelligent effort, optimization, positive &team work attitude to get things right the first time.
- 3. Provide basic knowledge of Steel, Plastic, Composite and other materials for suitable applications.
- 4. Study of Principle and hands on practice on techniques of fabrication, welding, casting, manufacturing, metrology, and allied skills.
- 5. Advance important hard & pertinent soft skills, productivity, create skilled manpower which is cognizant of industrial workshop components and processes and can communicate their work in a technical, clear and effective way.

Outcomes: After completion of course, students would be able to:

- 1. Understand safety measures to be followed in workshop to avoid accidents.
- 2. Identify various tools used in fitting, carpentry, tin smithy, house wiring, welding, casting and machining processes.
- 3. Make a given model by using workshop trades including fitting, carpentry, tinsmithy and House
 - wiring.
- 4. Perform various operations in welding, machining and casting processes.
- 5. Conceptualize and produce simple device/mechanism of their choice.

List of exercises:

Group-1

- 1. To make a lap joint on the given wooden piece according to the given dimensions.
- 2. To make a dove tail-joint on the given wooden piece according to the given dimensions.
- 3. a)Wiring of one light point controlled by one single pole switch, a three pin socket controlled by a single pole switch
- b) Wiring of two light points connected in series and controlled by single pole switch. Verify the above circuit with different bulbs. Wiring of two light points connected in parallel from two single pole switches and a three pin socket
 - 4. Stair case wiring-wiring of one light point controlled from two different places independently using two 2- way switches.
 - 5. To make external threads for GI pipes using die and connect the GI pipes as per the given diagram using taps, couplings & bends.
 - 6. To connect the GI pipes as per the given diagram using, couplings, unions, reducer & bends.
- To connect the GI pipes as per the given diagram using shower, tap & valves and Demonstrate by giving water connection

Group- 2

- 1. To Study the method of Additive Manufacturing process using a 3D printer
- 2. To create a 3D CAD model of a door bracket using a modeling software
- 3. To print a door bracket using an extruder type 3D Printer.
- 4. To create a 3D CAD model by reverse Engineering
- 5. To Design an innovative component using the CAD software
- 6. To print the selected innovative component by the students using a 3D printer

Text Books:

DIFFERENTIAL EQUATIONS AND NUMERICAL METHODS (CSE, CSE(AI&ML), CSE(IOT & Cyber Security including Block Chain Technology), IT, AI&ML, AI&DS)

Instruction	3 L+1T per week
Duration of SEE	3 Hours
SEE	60 Marks
CIE	40 Marks
Credits	4

Course Objectives:

- 1. To explain the relevant methods to solve first order differential equations.
- 2. To explain the relevant methods to solve higher order differential equations.
- 3. To discuss numerical methods to solve algebraic and transcendental equations.
- 4. To discuss the interpolation and numerical differentiation.
- 5. To discuss convergence and divergence of Infinite series.

Course Outcomes:

Upon completing this course, students will be able to:

- 1. Calculate the solutions of first order linear differential equations.
- 2. Calculate the solutions of higher order linear differential equations.
- 3. Solve the algebraic, transcendental and system of equations.
- 4. Apply interpolation and numerical differentiation techniques for given data.
- 5. Test the convergence and divergence of Infinite series.

UNIT - I

Differential Equations of First Order: Exact Differential Equations, Equations Reducible to Exact Equations, Linear Equations, Bernoulli's Equations, Riccati's and Clairaut's Equations, Orthogonal trajectories, Rate of decay of radio-active materials.

UNIT-II

Higher Order Linear Differential Equations: Higher order linear differential equations with constant coefficients, rules for finding Complementary function, Particular Integral and General solution. Method of Variation of Parameters, solution of Cauchy- Euler equation. LR and LCR circuits.

UNIT-III

Numerical solution of equations: Numerical solutions of algebraic and transcendental equations by Bisection method, Regula-falsi method and Newton-Raphson's method, Solution of system of linear equations by LU decomposition methods, Crout's method, Jacobi's method, Gauss Seidel method.

UNIT-IV

Interpolation and Numerical Differentiation: Forward, Backward and Central differences, Newton's forward and backward interpolation formulae, Gauss's forward and backward interpolation formulae, Lagrange interpolation, Numerical differentiation at the tabulated points with forward, backward and central differences.

UNIT-V

Infinite Series: Convergence of sequence and series. Series of positive terms, Necessary condition for convergence, Comparison tests, limit form comparison test, D'Alembert's Ratio test, Raabe's test, Cauchy's root test, Alternating series, Leibnitz's rule, absolutely and conditionally convergence.

Text Books:

CHEMISTRY

(Common to All Branches)

Instruction: Duration of SEE: SEE CIE: Credits:

Course Objectives

- 1. This syllabus helps at providing the concepts of chemical bonding and chemical kinetics to the students aspiring to become practicing engineers
- 2. Thermodynamic and Electrochemistry units give conceptual knowledge about processes and how they can be producing electrical energy and efficiency of systems.
- 3. To teach students the value of chemistry and to improve the research opportunities knowledge of stereochemistry and organic reactions is essential.
- 4. Water chemistry unit impart the knowledge and understand the role of chemistry in the daily life.
- 5. New materials lead to discovering of technologies in strategic areas for which an insight into Polymers, nanomaterials and basic drugs of modern chemistry is essential.

Course Outcomes

At the end of the course student will be able to:

- 1. Identify the microscopic chemistry in terms of molecular orbitals, intermolecular forces and rate of chemical reactions.
- 2. Discuss the properties and processes using thermodynamic functions, electrochemical cells and their role in batteries and fuel cells.
- 3. Illustrate the major chemical reactions that are used in the synthesis of organic molecules.
- 4. Classify the various methods used in treatment of water for domestic and industrial use.
- 5. Outline the synthesis of various Engineering materials & Drugs.

UNIT-I

Atomic and molecular structure and Chemical Kinetics:

Atomic and molecular structure: Molecular Orbital theory - atomic and molecular orbitals. Linear combination of atomic orbitals (LCAO) method. Molecular orbitals of diatomic molecules. Molecular Orbital Energy level diagrams (MOED) of diatomic molecules & molecular ions (H₂, He₂⁺, N₂, O₂, O₂⁻, CO, NO). Pi- molecular orbitals of benzene and its aromaticity.

Chemical Kinetics: Introduction, Terms involved in kinetics: rate of reaction, order & molecularity; First order reaction-Characteristics: units of first order rate constant & its half-life period, second order reaction-Characteristics: units of second order rate constant & its half-life period. Numericals.

UNIT-II

Use of free energy in chemical equilibria

Use of free energy in chemical equilibria: Thermodynamic functions: Internal energy, entropy and free energy. Significance of entropy and free energy (criteria of spontaneity). Free energy and emf (Gibbs Helmholtz equations and its applications). Cell potentials, electrode potentials, – Reference electrodes (NHE, SCE)-electrochemical series. Nernst equation and its applications. Determination of pH using combined Glass & Calomel electrode. Potentiometric Acid base & Redox Titrations. Numericals.

Battery technology: Rechargeable batteries & Fuel cells.

Lithium batteries: Introduction, construction, working and applications of Li-MnO₂ and Li-ion batteries.

Fuel Cells: Introduction, difference between conventional cell and fuel cell, limitations & advantages.

3L Hours per Week 3 Hours 60 Marks 40 Marks 3 Construction, working & applications of methanol-oxygen fuel cell.

UNIT-III

Stereochemistry and Organic reactions

Stereochemistry: Representations of 3 dimensional structures, Types of stereoisomerism-Conformational isomerism – confirmations of n-butane (Newman and sawhorse representations), Configurational isomerism -Geometrical (cis-trans) isomerism & Optical isomerism- optical activity, Symmetry and chirality: Enantiomers (lactic acid)&Diastereomers (Tartaric acid), Absolute configurations, Sequence rules for R&S notation.

Types of Organic reactions: Substitution Reactions- Electrophilic substitution (Nitration of Benzene); Nucleophilic Substitution ($S_N1\& S_N2$); Free Radical Substitution (Halogenation of Alkanes)

Addition Reactions: Electrophilic Addition – Markonikoff's rule, Free radical Addition - Anti Markonikoff's rule (Peroxide effect), Nucleophilic Addition – (Addition of HCN to carbonyl compounds)

Eliminations-E1 and E2 (dehydrohalogenation of alkyl halides) Cyclization (Diels - Alder reaction)

UNIT-IV

Water Chemistry:

Hardness of water – Types, units of hardness, Disadvantages of hard water, Alkalinity and Estimation of Alkalinity of water, Boiler troubles - scales & sludge formation, causes and effects, Softening of water by lime soda process (Cold lime soda process),ion exchange method and Reverse Osmosis. Specifications of potable water & industrial water. Disinfection of water by Chlorination; break point chlorination, BOD and COD definition, Estimation (only brief procedure) and significance, Numericals.

UNIT-V

Engineering Materials and Drugs:

Introduction, Terms used in polymer science; Thermoplastic polymers (PVC) & Thermosetting polymers (Bakelite); Elastomers (Natural rubber). Conducting polymers- Definition, classification and applications.

Polymers for Electronics: Polymer resists for integrated circuit fabrication, lithography and photolithography.

Nano materials-Introduction to nano materials and general applications, basic chemical methods of preparation- Sol-gel method. Carbon nanotubes and their applications. Characterisation of nanomaterials by SEM and TEM (only Principle).

Drugs-Introduction, Synthesis and uses of Aspirin (analgesic), Paracetamol (Antipyretic), Atenolol (antihypertensive).

Text Books:

22EEC01

BASIC ELECTRICAL ENGINEERING

Instruction Duration of SEE SEE CIE Credits 2L + 1T Hours per week 3 Hours 60 Marks 40 Marks 3

Course Objectives:

1. To understand the behaviour of different circuit elements R, L & C, and the basic concepts of electrical AC circuit analysis

2. To comprehend the basic principle of operation of AC and DC machines

3. To infer about different types of electrical wires and cables, domestic and industrial wiring. safety rules and methods of earthing.

Course Outcomes: After the completion of this course, the student will be able to

- 1. Understand the concepts of Kirchhoff's laws and their application various theorems to get solution of simple dc circuits.
- 2. Predict the steady state response of RLC circuits with AC single phase/three phase supply.
- 3. Infer the basics of single phase transformer
- 4. Describe the construction, working principle of DC machine and 3-phase Induction motor.
- 5. Acquire the knowledge of electrical wires, cables, earthing, Electrical safety precautions to be followed in electrical installations and electric shock and its safety and energy calculations.

UNIT-I

DC Circuits: Electrical circuit elements (R, L and C), voltage and current sources, Kirchhoff current and voltage laws, analysis of simple circuits with dc excitation, Superposition, Thevenin's and Norton's Theorems.

UNIT-II

AC Circuits: Representation of sinusoidal waveforms, peak and RMS values, phasor representation, real power, reactive power, apparent power, power factor, Analysis of single-phase ac circuits consisting of R, L, C, series RL and RC. Three phase balanced circuits, voltage and current relations in star and delta connections.

UNIT-III

Single Phase Transformer: Construction, Working principle, EMF Equation, Ideal and Practical transformer, Equivalent circuit of Transformer, OC and SC tests on a transformer, Efficiency and Regulation

UNIT-IV

DC and AC Machines: DC Generators: Construction, Principle of operation, EMF equation, Classification, Characteristics of shunt generators. DC Motors: Classification, Torque Equation, Characteristics and Speed control of DC Shunt and Series Motors, Losses and efficiency Three - Phase Induction Motors: Principle of operation, Applications

UNIT-V

Electrical Installations: Electrical Wiring: Types of wires and cables, Electrical Safety precautions in handling electrical appliances, electric shock, first aid for electric shock, safety rules. Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, Earthing (Elementary Treatment only), Elementary calculations for energy consumption

Text Books:

1. L. S. Bobrow, Fundamentals of Electrical Engineering, Oxford University Press, 2011.

2. E. Hughes, Electrical and Electronics Technology, Pearson, 2010.

Suggested Reading:

22CSC03

OBJECT ORIENTED PROGRAMMING

Instruction	2L+1T Hours per week
Duration of SEE	3 Hours
SEE	60 Marks
CIE	40 Marks
Credits	3

Course Objectives: The objectives of this course are to:

- 1. Explore the concepts object-oriented programming like classes, constructors, Polymorphism, Inheritance, and File handling.
- 2. Prepare student for solving real-world problems using OOPs concepts.

Course Outcomes: After completion of course, students would be able to:

- 1. Understand the concepts of Object-Oriented features.
- 2. Apply OOPs concepts and different libraries to solve programming problems.
- 3. Understand the advanced concepts of Python.
- 4. Develop programs to access databases and web data.
- 5. Understand APIs and third-party libraries to be used with Python.

UNIT I:

Introduction to Object Oriented Programming Paradigms - Programming paradigms, advantages of OOP, comparison of OOP with Procedural Paradigms; Classes and Objects: Prototyping, referencing the variables in functions, inline, static and friend functions. Memory allocation for classes and objects, arrays of objects, constructors.

UNIT II :

Polymorphism and Inheritance: Overriding methods, type conversions, base classes and derived classes, types of inheritance, various types of classes, invocation of constructors and destructors inheritance, aggregation, composition, classification hierarchies, metaclass/ abstract classes, unit testing and exceptions.

UNIT III:

Python Libraries -Basics of Open Source libraries for data pre-processing, modeling and visualization.

UNIT IV:

Python to access Web Data - Regular Expressions, extracting data, sockets, using the Developer Console to Explore HTTP, Retrieving Web Page, and Passing Web Pages.

UNIT V:

Using Databases with Python - Using Databases, Single Table CRUD, Designing and representing a data model, reconstructing data with JOIN, many-to-many relationships.

Text Books and References:

- 1. Allen Downey, Jeff Elkner, Chris Meyers, "How to Think Like a Computer Scientist: Learning with Python", SoHo Books, 2009.

CHEMISTRY LAB

(Common to All Branches)

Instruction: Duration of SEE SEE: CIE Credits:

Course Objectives

- 1. To impart fundamental knowledge in handling the equipment / glassware and chemicals in chemistry laboratory.
- 2. To provide the knowledge in both qualitative and quantitative chemical analysis
- 3. The student should be conversant with the principles of volumetric analysis
- 4. To apply various instrumental methods to analyse the chemical compounds and to improve understanding of theoretical concepts.
- 5. To interpret the theoretical concepts in the preparation of new materials like drugs and polymers.

Course Outcomes

At the end of the course student will be able to:

- 1. Identify the basic chemical methods to analyse the substances quantitatively & qualitatively.
- 2. Estimate the amount of chemical substances by volumetric analysis.
- 3. Determine the rate constants of reactions from concentration of reactants/ products as a function of time.
- 4. Calculate the concentration and amount of various substances using instrumental techniques.
- 5. Develop the basic drug molecules and polymeric compounds.

Chemistry Lab

- 1. Introduction: Preparation of standard solution of oxalic acid and standardisation of NaOH.
- 2. Estimation of metal ions $(Co^{+2}\& Ni^{+2})$ by EDTA method.
- 3. Estimation of temporary and permanent hardness of water using EDTA solution
- 4. Determination of Alkalinity of water
- 5. Determination of rate constant for the reaction of hydrolysis of methyl acetate. (first order)
- 6. Determination of rate constant for the reaction between potassium per sulphate and potassium Iodide. (second order)
- 7. Estimation of amount of HCl Conductometrically using NaOH solution.
- 8. Estimation of amount of HCl and CH₃COOH present in the given mixture of acids Conductometrically using NaOH solution.
- 9. Estimation of amount of HCl Potentiometrically using NaOH solution.
- 10. Estimation of amount of Fe⁺² Potentiometrically using KMnO₄ solution
- 11. Preparation of Nitrobenzene from Benzene.
- 12. Synthesis of Aspirin drug and Paracetamol drug.
- 13. Synthesis of phenol formaldehyde resin.

Text Books:

- 1. J. Mendham and Thomas , "Vogel's text book of quantitative chemical analysis", Pearson education Pvt.Ltd. New Delhi ,6th ed. 2002.
- 2. Senior practical physical chemistry by B.D.Khosla, V.C.Garg&A.Gulati,; R. Chand & Co. : New Delhi (2011).

- 3P Hours per Week
- 3 Hours
- 50 Marks
- 50 Marks
- 1.5

Suggested Readings:

- 1. Dr.Subdharani, "Laboratory Manual on Engineering Chemistry", Dhanpat Rai Publishing,
- 2012.
 S.S. Dara , "A Textbook on experiment and calculation in engineering chemistry", S.Chand and Company, 9th revised edition, 2015.

22MBC02

COMMUNITY ENGAGEMENT

Instruction	3P Hours per week
CIE	50 Marks
Credits	1.5

Course Objectives: The main Objectives of this Course are to:

- 1. Develop an appreciation of Rural culture, life-style and wisdom among the Students.
- 2. Learn about the various livelihood activities that contribute to Rural economy.
- 3. Familiarize the Rural Institutions and the Rural Development Programmes in India.

Course Outcomes: After the completion of this Course, Student will be able to:

- 1. Gain an understanding of Rural life, Culture and Social realities.
- 2. Develop a sense of empathy and bonds of mutuality with Local Communities.
- 3. Appreciate significant contributions of Local communities to Indian Society and Economy.
- 4. Exhibit the knowledge of Rural Institutions and contributing to Community's Socio-Economic improvements.
- 5. Utilise the opportunities provided by Rural Development Programmes.

Module I Appreciation of Rural Society

Rural life style, Rural society, Caste and Gender relations, Rural values with respect to Community, Nature and Resources, elaboration of 'soul of India lies in villages' (Gandhi), Rural Infrastructure.

Module II Understanding Rural Economy and Livelihood

Agriculture, Farming, Landownership, Water management, Animal Husbandry, Non-farm Livelihood and Artisans, Rural Entrepreneurs, Rural markets, Rural Credit Societies, Farmer Production Organization/Company.

Module III Rural Institutions

Traditional Rural organizations, Self-Help Groups, Panchayati Raj Institutions (Gram Sabha), Gram Panchayat, Standing Committees, Local Civil Society, Local Administration.

Module IV Rural Development Programmes

History of Rural Development in India, Current National Programmes: SarvaShiksha Abhiyan, BetiBhachao, BetiPadhao, Ayushman, Bharat, Swachh Bharat, PM Awas Yojana, Skill India, Gram Panchayat Decentralised Planning, NRLM, MNREGA etc.

Text Books:

- 1. Singh, Katar, Rural Development: Principles, Policies and Management, Sage Publications, New Delhi, 2015.
- 2. A Hand book on Village Panchayat Administration, Rajiv Gandhi Chair for Panchayati Raj Studies, 2002.
- 3. United Nations, Sustainable Development Goals, 2015, un.org/sdgs
- 4. M.P Boraia, Best Practices in Rural Development, Shanlax Publishers, 2016.

Journals:

- 1. Journal of Rural development (published by NIRD & PR, Hyderabad).
- 2. Indian Journal of Social Work, (by TISS, Bombay).
- 3. Indian Journal of Extension Educations (by Indian Society of Extension Education).
- 4. Journal of Extension Education (by Extension Education Society).
- 5. Kurukshetra (Ministry of Rural Development, GOI).

Yojana (Ministry of Information & Broadcasting, GOI).

22CSC04

OBJECT ORIENTED PROGRAMMING LAB

Instruction
Duration of SEE
SEE
CIE
Credits

2P Hours per week 3 Hours 50 Marks 50 Marks 1

Course Objectives: The objectives of this course are to:

- 1. Master the concepts of Object Oriented Programming.
- 2. Explore the OOPs features of Python and build applications.

Course Outcomes: After completion of course, students would be able to:

- 1. Demonstrate the features of Object-Oriented Programming.
- 2. Understand APIs and third-party libraries to be used with Python.
- 3. Use Python libraries to solve real-world problems.
- 4. Write scripts to solve data science/machine leaning problems using NumPy and Pandas.
- 5. Develop applications by accessing web data and databases.

Laboratory / Practical:

- 1. Write a NumPy program to compute the cross product of two given vectors.
- 2. Write NumPy program to calculate the QR decomposition of a given matrix.
- 3. Write a Pandas program to convert a Panda Module Series to Python list and its type.
- 4. Write a Pandas program to convert a NumPy array to a Pandas series.
- 5. Create a Python project to get the citation from Google scholar using title and year of publication and volume and pages of journal.
- 6. Create a Python project to get total COVID-19 cases, total deaths due to COVID-19, total COVID-19 patients recovered in the world.

Text Book:

1. Reema Thareja, "Python Programming", Oxford Press, 2017.

22MEC37

ROBOTICS AND DRONES LAB

(Common to All Branches)

Instruction2T + 2P Hours per weekCIE100Credits3

Objectives: The objectives of this course are to:

- 1. To develop the students' knowledge in various robot and drone structures and their workspace.
- 2. To develop multidisciplinary robotics that have practical importance by participating in robotics competitions
- 3. To develop students' skills in performing spatial transformations associated with rigid body motions, kinematic and dynamatic analysis of robot systems.
- 4. Through projects done in lab, increase the true hands-on student learning experience and enhance their conceptual understanding, increase students' ability, competence and teamwork skills on dealing with real-life engineering problems

Outcomes: After completion of course, students would be able to:

- 1. Demonstrate knowledge of the relationship between mechanical structures of robotics and their operational workspace characteristics
- 2. Understand mechanical components, motors, sensors and electronic circuits of robots and build robots.
- 3. Demonstrate knowledge of robot controllers.
- 4. Use Linux environment for robotic programming.
- 5. Write Python scripts to control robots using Python and Open CV.

Lab Experiments:

- 1. Assembling of robot mechanical components, mounting of motors, sensors, electronic circuits to the chassis.
- 2. Connecting to electronic circuitry: motor drivers, incremental encoders proximity sensors, micro controller,
- 3. Different types of batteries, selection of suitable battery for application, safety precaution.
- 4. Introduction to Linux Command Line Interface: basic file and directory management and other useful commands
- 5. Controlling robot using Python: i) Move robot using Python code, ii) Make robot move in patterns using Python
- 6. Robot programming with Sensor inputs:i) Read sensor data using Python, ii) Visualize sensor data using Python, iii) Code robot to avoid obstacles by using sensor data
- Open CV: i) Create an Image and display an image; ii) Read and change pixel values; iii) Create colored shapes and save image; iv) Extract the RGB values of a pixel; v) Reading and Writing Videos
- 8. Open CV: i) Extraction of Regions of Interest; ii) Extraction of RGB values of a pixel
- 9. Coding robot to work with colors, follow colored objects, identifying shape of the objectoriented
- 10. Projects: i)Making a line follower robot using a Camera; ii) Writing code for a complex function
- 11. Assembly of a drone

22EEC02

BASIC ELECTRICAL ENGINEERING LAB

Instruction	2P Hours per week
Duration of Semester End Examination	3 Hours
Semester End Examination	50 Marks
CIE	50 Marks
Credits	1

Course Objectives:

- 1. To acquire the knowledge on different types of electrical elements and to verify the basic electrical circuit laws and theorems.
- 2. To determine the parameters and power factor of a coil, calculate the time and frequency responses of RLC circuits and to familiarize with measurement of electric power & energy.
- 3. To determine the characteristics of Transformers, dc, ac machines and switch gear components

Course Outcomes: At the end of the course, the students are expected to

- 1. Comprehend the circuit analysis techniques using various circuital laws and theorems.
- 2. Analyse the parameters of the given coil and measurement of power and energy in AC circuits
- 3. Determine the turns ration/performance parameters of single-phase transformer
- 4. Infer the characteristics of DC shunt motor different tests.
- 5. Illustrate different parts and their function of electrical components, equipment and machines.

List of Laboratory Experiments/Demonstrations:

- 1. Verification of KCL and KVL.
- 2. Verification of Thevenin's theorem.
- 3. Verification of Norton's theorem.
- 4. Charging and discharging of Capacitor.
- 5. Determination of parameters of a choke or coil by Wattmeter Method.
- 6. Power factor improvement of single-phase AC System.
- 7. Active and Reactive Power measurement of a single-phase system using
 - (i) 3-Ammeter method (ii) 3-Voltmeter method
- 8. Measurement of 3-Phase Power in a balanced system
- 9. Calibration of single-phase energy meter.
- 10. Verification of Turns/voltage ratio of single-phase Transformer.
- 11. Open Circuit and Short Circuit tests on a given single phase Transformer
- 12. Brake test on DC Shunt Motor
- 13. Speed control of DC Shunt Motor
- 14. Demonstration of Measuring Instruments and Electrical Lab components.
- 15. Demonstration of Low-Tension Switchgear Equipment/Components
- 16. Demonstration of cut out section of Machines like DC Machine, Induction Machine etc.

Note: TEN experiments to be conducted to cover all five Course Outcomes.

DATA BASE MANAGEMENT SYSTEMS (Common to CSE,CSE-AIML,AIML,CET,IT,AIDS)

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-requisites: Discrete mathematics of computer science, Programming and Data Structures.

Course Objectives:

This course aims to:

- 1. Familiarize students with fundamental concepts of database management. These concepts include aspects of database design, database languages and database-system implementation.
- 2. Understand about data storage techniques and indexing.
- 3. Impart knowledge in transaction management, concurrency control techniques and recovery procedures.

Course Outcomes:

Upon completion of this course, students will be able to:

- 1. Design database schema for an application using RDBMS concepts.
- 2. Write SQL queries for tasks of various complexities.
- 3. Build applications using database system as backend.
- 4. Understand internal working of a DBMS including data storage, indexing, query processing, transaction processing, concurrency control and recovery mechanisms.
- 5. Analyze non-relational and parallel/distributed data management systems with a focus on scalability.

CO-PO Articulation Matrix

UNIT - I

Introduction: Motivation, Introduction to Data Models (Relational, Semi structured, ER). Relational Data Bases: Relational Data Model, Relational Algebra, Relational Calculus.

UNIT - II

SQL + Interaction with Database: SQL Data Types, Basic Structure of SQL Queries, Modification of the Database, Set Operations, Aggregate Functions, Data-Definition Language, Integrity Constraints, Null Values, Views, Join Expression, Index Definition in SQL.

Simple Queries: (select/project/join/ aggregate queries), Complex queries (With Clause, Nested Subqueries, Views), Programming in a standard language and interfacing with a DB backend.

UNIT- III

Big Data: Key-value Stores and Semi structured Data, using JSON and MongoDB, or other combinations. Database Design: Introduction to ER model, Mapping from ER to relational model, Functional Dependencies, Normalization.

UNIT - IV

Physical Design: Overview of Physical Storage (Hard Disks, Flash/SSD/RAM), sequential vs random I/O, Reliability via RAID, Storage Organization (Records, Pages and Files), Database Buffers, Database Metadata, Indexing, B+-Trees.

UNIT - V

Query Processing and Optimization: Query Processing, External sort, Joins using nested loops, indexed nested loops.

Overview of Query Optimization: Equivalent expressions and concept of cost based optimization. **Transaction Processing:** Concept of transactions and schedules, ACID properties, Conflict-serializability. **Concurrency control:** locks, 2PL, Strict 2PL, optional: isolation levels, Recovery using undo and redo logs.

Text Books:

- 1. Silberschatz, Korth and Sudarshan, "Database System Concepts", 7th Edition, McGraw-Hill. Indian Edition, 2021.
- 2. Elmasri and Navathe, "Fundamentals of Database Systems", 7th Edition, Pearson Pubs, 2017.
- 3. Lemahieu, Broucke and Baesens, "Principles of Database Management", Cambridge University Press, 2018.
- 4. RP Mahapatra, "Database Management Systems", Khanna Publishing House, 2020.
- 5. Krishnan, "Database Management Systems", McGraw Hill.

Suggested Reading:

- 1. MySQL Explained: Your Step By Step Guide To Database Design
- Pro SQL Server 2008 Relational Database Design and Implementation (Expert's Voice in SQL Server) 1st Edition

22CSC20

COMPUTER NETWORKS (Common to CSE.CET)

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-requisites: Programming for problem solving and data structures.

Course Objectives:

This course aims to:

- 1. To understand the principles of data communication and organization of computer networks,
- 2. To analyze various routing protocols and congestion control algorithms.
- 3. To study the functions of the transport layer and to understand application layer protocols.

Course Outcomes:

Upon completion of this course, students will be able to:

- 1. Learn the communication protocol suites like ISO-OSI and TCP/IP.
- 2. Illustrate and explain Data Communications System and its components.
- 3. Identify and analyze various congestion control algorithms.
- 4. Distinguish the internet protocols and understand transport layer protocols like IP, ARP, ICMP, TCP, UDP, RTCP.
- 5. Identify various application layer protocols like HTTP, WWW, DNS, Email Protocols, FTP and the underlying protocols.

CO-PO Articulation Matrix

UNIT-I

Introduction: Data communication, network types and models, TCP/IP and OSI Protocol Suite, transmission media (wired and wireless), switching.

UNIT-II

Data Link Layer: Design issues, error detection and correction, elementary data link protocols, sliding window protocols, HDLC, multiple access protocols. LAN: Wired LAN, wireless LAN, Virtual LAN.

UNIT-III

Network Layer: Network layer design issues, routing algorithms, congestion control algorithms, Quality of service, IPV4, IPV6, network layer protocols: ARP, RARP, ICMP, IGMP and DHCP.

UNIT-IV

Transport Layer: Process to Process Communication, User Datagram Protocol (UDP), Transmission Control Protocol (TCP), SCTP, congestion control, quality of service.

UNIT-V

Application Layer: DNS, DDNS, SMTP, POP, IMAP, SSH, SFTP, WWW, HTTP, SNMP, Firewalls.

DATA STRUCTURES (Common to CSE,CSE-AIML,AIML,CET,IT,AIDS)

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-requisites: Basic knowledge of programming language such as python.

Course Objectives:

This course aims to:

- 1. Study various linear and non-linear data structures.
- 2. Understand the performance of operations on data structures.
- 3. Explore various searching and sorting techniques.

Course Outcomes:

Upon completion of this course, students will be able to:

- 1. Understand the basic concepts and types of data structures.
- 2. Analyze various linear and nonlinear datastructures.
- 3. Identify the applications of linear and nonlinear data structures and significance of balanced search trees, hashing.
- 4. Evaluate various searching and sorting techniques.
- 5. Use appropriate data structures to design efficient algorithms.

CO-PO Articulation Matrix

UNIT-I

Introduction: Data structures, Classification of data structures, Abstract Data Types, Analysis of Algorithms. Recursion: Examples illustrating Recursion (Factorial, Binary Search), Analyzing Recursive Algorithms. Sorting: Quick sort, Merge Sort, Selection Sort, Radix sort, Comparison of Sorting Algorithms.

UNIT-II

Stacks: Stack ADT, Applications of stack, Array based stack implementation.

Queues: Queue ADT, applications of queues, Array based queue implementation, Double Ended Queues, Circular queues.

UNIT-III

Linked Lists: Introduction, Linked lists, Representation of linked list, types of linked list, singly linked lists, implementing stack with a singly linked list and Queue, Circular linked lists, doubly linked lists, Applications of linked lists.

UNIT-IV

Trees: General Trees, Binary Trees, Implementing Trees, Tree traversals. Search Trees: Binary Search Trees, Balanced search trees- AVL trees, B- trees. Priority Queue and Heaps: Priority queue ADT, Priority queue applications, Heap Trees, implementing a priority queue with a Heap, Heap Sort.

UNIT-V

Graphs: Introduction, Applications of graphs, Graph representations, graph traversals. Hashing: Introduction, Hash Functions-Modulo, Middle of Square, Folding, Collision Resolution Techniques-Separate Chaining, Open addressing, Linear Probing, Quadratic Probing, Double Hashing.

DISCRETE MATHEMATICS

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Course Objectives

This course aims to:

- 1. Introduce Propositional and Predicate Logic.
- 2. Introduce various proof techniques for validation of arguments.
- 3. Develop an understanding of counting, functions and relations.
- 4. Familiarize with fundamental notions and applicability of graph theory and algebraic systems

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Describe rules of inference for Propositional and Predicate logic.
- 2. Demonstrate use of Set Theory, Venn Diagrams, and relations in Real-world scenarios.
- 3. Model solutions using Generating Functions and Recurrence Relations.
- 4. Determine the properties of graphs and trees to solve problems arising in computer science applications.
- 5. Distinguish between groups, semi groups and monoids in algebraic systems

CO 5	3	3	1	1	-	-	-	-	-	-	-	-			

CO-PO Articulation Matrix

Unit –I

Introduction to Propositional Calculus: Basic Connectives and Truth tables, Logical Equivalence: Laws of Logic, Logical Implication; Rules of Inference. Predicates: The Use of Quantifiers, Quantifiers, Definitions and the Proofs of Theorems

Unit –II

Sets: Sets and Subsets, Operations on sets and the Laws of Set Theory, Counting and Venn Diagrams. **Relations**: Cartesian Products and Relations. Partial ordering relations, POSET, Hasse diagrams, Lattices as Partially Ordered Sets, Equivalence relations. Pigeon hole principle.

Unit –III

Generating Functions: Generating Functions, Calculating Coefficient of generating functions. **Recurrence Relations**: The First Order Linear Recurrence Relation, Second Order Linear. Homogeneous Recurrence relations with constant coefficients, Non Homogeneous Recurrence relations.

Unit –IV

Introduction to Graphs: Graphs and their basic properties- degree, path, cycle, Sub graphs, Complements and Graph Isomorphism, Euler trails and circuits, Hamiltonian paths and cycles, planar graphs, Euler formula, Graph Coloring. **Trees:** Definitions, Properties, Spanning Trees, Minimum Spanning trees: The Algorithms of Kruskal and Prims.

Unit –V

Algebraic Structures: Algebraic Systems, Examples and General Properties, Semi groups and Monoids. Groups: Definitions and Examples, Subgroups, Homomorphisms and cyclic groups.

22ITC01

DIGITAL LOGIC AND COMPUTER ARCHITECTURE (Common to IT, AI&DS and CET branches)

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Course Objectives:

This course aims to:

- 1. To familiarize with logic gates, combinational and Sequential logic circuits.
- 2. To provide understanding of Digital Counters, registers and Data representation.
- 3. To present the operation of the Central Processing Unit.
- 4. To facilitate the techniques that computers use to communicate with input and output devices.
- 5. To introduce the concept of memory hierarchy and memory management.

Course Outcomes:

Upon completing this course, students will be able to:

- 1. Apply Boolean algebra for simplification and learn representation of data using numbers.
- 2. Understand fundamentals of combinational & sequential logic gates, registers and counters.
- 3. Infer the architecture and functionality of the central processing unit.
- 4. Explore the techniques that computers use to communicate with I/O devices for data transfer.
- 5. Comprehend memory hierarchy, cache memory and virtual memory.

CO 5	2	2	1	-	-	-	1	-	1	-	2	2	-	-	-

CO-PO Articulation Matrix

UNIT-I

Data Representation: Number Systems, Octal and Hexadecimal Numbers, Decimal Representation, Complements: (r-1)'s Complement, r's Complement, Subtraction of Unsigned Numbers, Fixed–Point Representation, and Floating –Point Representation.

Digital Logic Circuits : Digital Computers, Logic Gates, Boolean Algebra, Map simplification, Product – of-sums Simplification, Don't – Care Conditions.

UNIT-II

Combinational Circuits: Decoders, Encoders, Multiplexers, Half-Adder, Full-Adders.

Flip-Flops: SR, D, JK, T Flip- Flops, Edge triggered Flip-Flops, Excitation Tables.

Registers: Register with Parallel load, Bidirectional Shift Register with Parallel load, 4-bit Synchronous Binary Counter.

UNIT-III

Central Processing Unit: General register Organization, Instruction Formats: Three Address Instructions, Two-Address Instructions, One-Address Instructions, and Zero-Address Instructions. Addressing Modes: Data Transfer and Manipulation, Program Control, Multi core Processors and their Performance.

UNIT-IV

Input-Output Organization: Peripheral Devices: ASCII Alphanumeric Characters, Input-output Interface: I/O Bus and Interface Modules, Asynchronous Data Transfer: Strobe Control, Handshaking, Asynchronous Communication Interface, First-In- First-Out Buffer, Modes of Transfer: Interrupt-Initiated I/O, Priority Interrupt: Daisy Chaining, Parallel Priority Interrupt, Priority Encoder, Direct Memory Access (DMA): DMA Controller.

UNIT-V

Memory Organization: Memory Hierarchy, Main Memory: RAM and ROM Chips, Memory Address Map, Memory Connection to CPU, Auxiliary memory: Magnetic Disks, Solid State Drive, Associative Memory: Hardware Organization, Read and Write Operations, Cache Memory: Associative Mapping, Direct Mapping, Set-Associative Mapping, Virtual Memory: Address Space and Memory Space, Address Mapping using Pages, Associative Memory Page Table.

22CIC01

CYBER SECURITY AND TOOLS

Instruction Duration of SEE SEE CIE Credits 2 L Hours per Week 3 Hours 60 Marks 40 Marks 2

Pre-Requisites

Basic computer knowledge.

Course Objectives

- 1. To Identify and present indicators that a cybercrime has occurred and understand methods and tools used in cybercrimes,
- 2. To collect, Process, Analyze and Present Computer Forensics Evidence
- 3. To understand the legal perspectives and Organizational implications of Cyber Security.

Course Outcomes

By the end of this course, students should be able to:

- 1. Discuss different types of cybercrimes and analyze legal frameworks to deal with these cybercrimes.
- 2. Describe the usage of tools in cybercrimes.
- 3. Recognize the importance of digital evidence in prosecution.
- 4. Analyze and resolve cyber security issues in various domains.
- 5. Understand the importance of Cyber Laws and their Legal perspective.

CO5	1	-	1	-	-	-	-	-	-	-	-	2

CO-PO Articulation Matrix

Unit – I

Introduction to Cyber Crime: Cyber Crime - Definition and Origins of the Word, Cyber-crime and Information Security, Layered approach architecture for Cyber Security, Classification of Cyber Crimes. **Cyber Offenses:** Introduction, How Criminals plan the Attacks, Social Engineering, Cyber stalking, Cyber café and Cybercrimes.

Botnets: The Fuel for Cybercrime, Attack Vector..

Unit – II

Tools and Methods Used in Cybercrime: Introduction, Foot Printing Tools, Proxy Servers and Anonymizers, Phishing, Password Cracking, Key loggers and Spywares TCP-dump, Wireshark. **Malware Analysis:** Virus and Worms, Trojan Horse, Backdoors and Ransomware, Steganography, DoS and DDoS attacks, SQL Injection, Buffer Overflow.

Unit – III

Understanding Cyber Forensics: Introduction, Digital Forensics Science, Need for Computer Forensics, Cyber Forensics and Digital Evidence, Forensics Analysis of Email, Digital Forensics Life Cycle, Chain of Custody Concept, Network Forensics, Challenges in Computer Forensics.

Unit – IV

Security: Windows Security at the heart of the defense, Attacks against the windows workstation, the focus of UNIX/Linux Security, Web Browser Attacks and Operating Safely, E-Mail Security and Operating safely when using E-Mail, Introduction to Cloud Security, Web threats for Organizations.

Social media marketing: Security Risks and Perils for Organizations, Social Computing and the associated challenges for Organizations.

Unit – V

Cyber Laws: The Legal Perspectives, Need of Cyber laws: the Indian Context, The Indian IT Act, Amendments of Indian IT Act, Challenges to Indian Law and Cyber Crime Scenario in India, Digital Signatures and the Indian IT Act, Cyber Crime and Punishment, Cyber Law.

Technology and Students: The Indian Scenario

DATA BASE MANAGEMENT SYSTEMS LAB (Common to CSE-AIML,AIML,CET,IT,AIDS)

Instruction Duration of SEE SEE CIE Credits 2 P Hours per Week 3 Hours 50 Marks 50 Marks

Pre-requisites: Discrete mathematics of computer science, Programming and Data Structures.

Course Objectives:

This course aims to:

- 1. Become familiar with the concepts of structured query language.
- 2. Understand about programming language / structured query language (PL/SQL).
- 3. Become familiar with generation of form and open database connectivity.
- 4. Add constraints on Databases implement DCL, TCL and advanced SQL commands.
- 5. Develop programs using cursors, triggers, exceptions, procedures and functions in PL/SQL.

Course Outcomes:

Upon completion of this course, students will be able to:

- 1. Outline the built-in functions of SQL and apply these functions to write simple and complex queries using SQL operators.
- 2. Demonstrate Queries to Retrieve and Change Data using Select, Insert, Delete and Update. Construct Queries using Group By, Order By and Having Clauses.
- 3. Demonstrate Commit, Rollback, Save point commands, SQL Plus Reports and formulate the Queries for Creating, Dropping and Altering Tables, Views, constraints.
- 4. Develop queries using Joins, Sub-Queries and Working with Index, Sequence, Synonym, Controlling Access and Locking Rows for Update, Creating Password and Security features.
- 5. Develop PL/SQL code using Cursors, Exception, Composite Data Types and Procedures, Functions and Packages.

CO-PO Articulation Matrix

List of Experiments:

SQL:

- 1. Queries using Built-In functions, like aggregate functions, String Functions, Numeric Functions, Data Functions, Conversion Functions and other miscellaneous.
- 2. Queries using operators in SQL.
- 3. Queries to Retrieve and Change Data: Select Insert, Delete and Update.
- 4. Queries using Group By, Order By and Having Clauses.
- 5. Queries on Controlling Data: Commit, Rollback and Save point.
- 6. Queries to Build Report in SQL *PLUS.
- 7. Queries for Creating, Dropping and Altering Tables, Views and Constraints.
- 8. Queries on Joins and Correlated Sub-Queries.
- 9. Queries on Working with Index, Sequence, Synonym, Controlling Access and Locking Rows for Update.

- 10. Creating Password and Security features.
- 11. Querying in NoSql.

PL/SQL:

- 1. Write a PL/SQL code using Basic Variable, Anchored Declarations and Usage of Assignment Operation.
- 2. Write a PL/SQL code Bind and Substitution Variables, Printing in PL/SQL.
- 3. Write a PL/SQL block using SQL and Control Structures in PL/SQL.
- 4. Write a PL/SQL code using Cursors, Exception and Composite Data Types.
- 5. Write a PL/SQL code using Procedures, Functions and Packages.

<u>Note:</u> The creation of sample database for the purpose of the experiments is expected to be predecided by the instructor.

Text Books / Suggested Reading:

NETWORKS LAB (Common to CET)

Instruction Duration of SEE SEE CIE Credits 2 P Hours per Week 3 Hours 50 Marks 50 Marks

Pre-requisites: Operating Systems, Data Communication and Computer Networks.

Course Objectives:

This course aims to:

- 1. To familiarize students with the communication media, devices, and protocols.
- 2. To expose students to gain practical knowledge of computer networks and its configuration.
- 3. To create simple network topologies using simulation tools.

Course Outcomes:

Upon completion of this course, students will be able to:

- 1. Identify the different types of wiring equipment used in the network lab.
- 2. Understand the various network devices like repeater, hub, switch, and routers.
- 3. Practice the basic network configuration commands like ifconfig, ping, traceroute, nslookup, dig, arp, netstat, nmap.
- 4. Design the network topologies using GNS3 and examine the packet transfer.
- 5. Design the network using various routing protocols.

DATA STRUCTURES LAB (Common to CSE-AIML,AIML,CET,IT,AIDS)

Instruction Duration of SEE SEE CIE Credits 2 P Hours per Week 3 Hours 50 Marks 50 Marks

Pre-requisites: Any Programming Language.

Course Objectives:

This course aims to:

- 1. Understand the basic concepts of data structures and abstract data types.
- 2. Explore linear and non-linear data structures.
- 3. Study various searching, sorting and hashing techniques.

Course Outcomes:

Upon completion of this course, students will be able to:

- 1. Implement the abstract data type.
- 2. Implement linear and non-linear data structures.
- 3. Evaluate various sorting techniques.
- 4. Analyze various algorithms of linear and nonlinear data structures.
- 5. Choose or create appropriate data structures to solve real world problems.

22CIC02

CYBER SECURITY AND TOOLS LAB

Instruction Duration of SEE SEE CIE Credits 2 P Hours per Week 3 Hours 50 Marks 50 Marks 1

Pre-Requisites

Basic computer knowledge.

Course Objectives

- 1. To understand the tools used in Cyber Crimes.
- 2. To understand the phases involved in planning Cyber Crimes.
- **3.** To configure the Defense Security System. To gain knowledge of various input and output devices required for interacting in virtual world along with rendering and modelling.

Course Outcomes

By the end of this course, students should be able to:

- 1. Use Foot Printing Tools for Information Gathering.
- 2. Scan and scrutinize the information gathered.
- 3. Understand the usage of Sniffer Tools.
- 4. Become familiar with Attack Launching Tools.
- 5. Configure the proactive Défense system

22MTC13

Mathematical Foundation for Data Science and Security

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

Course Objectives

- 1. Able to learn and Analyzing data in Linear and Non-Linear form.
- 2. Able to fit the hypothetical data using probability distribution.
- 3. To know the characteristic of various continuous probability distributions.
- 4. To discuss the testing of hypothesis of sample data.
- 5. To know the security issues of Cryptography.

Course Outcomes

On successful completion of this course the students shall be able to

- 1. Analyze the coefficient of skewness and fitting of the data by various methods.
- 2. Apply properties of Mathematical Expectations and analyze the various distributions.
- 3. Evaluate areas of curves by using various distributions.
- 4. Apply various tests for testing the significance of sample data.
- 5. Apply RSA PKC for solving security issues.

CO-PO Articulation Matrix

Unit – I: Basic Statistics

Measures of Central Tendency, Measures of Dispersion, Moments (Moments about the mean and moments about a point). Skewness, Karl Pearson's coefficient of skewness and Bowley's coefficient of skewness for frequency distribution, Kurtosis. Correlation, coefficient of correlation, limits of correlation coefficient. Linear Regression, Regression coefficients, Properties of Regression Coefficients. Curve fitting by the Method of Least Squares, Fitting of Straight lines and Exponential curve..

Unit - II: Mathematical Expectation and Discrete Probability Distribution

Conditional Probability, Baye's theorem. Random variable, discrete random variable, Probability Mass Function, continuous random variable, probability density function. Mathematical expectation, properties of Expectation, properties of variance. Poisson distribution, MGF and Cumulates of the Poisson distribution, Recurrence formula for the probabilities of Poisson distribution (Fitting of Poisson distribution).

Unit – III: Continuous Probability Distributions

Normal distribution, Characteristics of normal distribution and Normal probability Curve, MGF and CGF of Normal distribution, Areas under normal curve. Uniform distribution, Moment generating function, Mean and

Variance of uniform distribution. Exponential distribution, MGF, CGF, Mean and Variance of Exponential distribution.

Unit – IV: Testing of Hypotheses

Test of significance, null and alternative hypotheses, Errors in sampling, level of significance. Large sample test: Test of significance for single proportion, difference of proportions, single mean and difference of means. Small Sample Tests: T-Test for single mean, differences of Means. F- test for equality of two population variances. Chi-Square test of Goodness of fit.

Unit - V: Number Theory & CRYPTOGRAPHY (RSA - PKC)

Division Algorithm, Greatest Common Divisor, Euclidean Algorithm, Wilson's Theorem, Euler's Phi-Function, Euler's Theorem, Some Properties of the Phi-Function. The RSA public key cryptosystem, Implementation and security issues, Pollard's p-1 factorization algorithm, Quadratic Residues and quadratic reciprocity

DESIGN AND ANALYSIS OF ALGORITHMS

Instruction Duration of SEE SEE CIE Credits

Pre-Requisites

Basics of Data structures and algorithms.

Course Objectives

This course aims to:

- 1. Provide an introduction to formalisms to understand, analyze and denote time complexities of algorithms.
- 2. Introduce the different algorithmic approaches for problem solving through numerous example problems.
- 3. Provide some theoretical grounding in terms of finding the lower bounds of algorithms and the NP-completeness.

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Analyzing performance of algorithms using asymptotic notations.
- 2. Demonstrate familiarity with major algorithms and importance of algorithm design techniques.
- 3. Apply algorithm design techniques on different problems.
- 4. Analyze the efficiency of the algorithms.
- 5. Understanding limits of efficient computation with the help of complexity classes.

CO-PO Articulation Matrix

Unit –I

Introduction: Web Fundamentals, **HTML 5.0:** basic tags, Images, Tables, Lists, Forms, Layout, Graphics, span and div tags. Grid. **Introduction to Cascading Style Sheets:** Types of CSS, text and font, color, CSS Selectors, CSS BOX Model, CSS Positioning, and CSS floating. **Bootstrap:** Introduction of Bootstrap, Container and Container-fluid, Jumbotron, Grid, Table, Form, Alert, Navbar, Modals.

Unit –II

Java Script: Introduction, data types, control structures, functions, arrays, objects, regular expressions, working with events, form validation, DOM Elements, Accessing and modifying Elements using DOM, Dynamic document with Java script.

Unit –III

Mongo DB: Introduction, Importance of NoSQL databases, Data types, Documents, nested Documents, CRUD Operations, Basic cursor methods: map, toArray, pretty, forEach, limit, count, sort, Columnar Databases, Indexing and Aggregation, MongoDB Node JS Drivers and CAP theorem.

3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Unit –IV

React Js: ES5 vs Es6, Scoping - var vs let vs const, Arrow functions, Use of this keyword (lexical scoping), Spread & rest parameter, Array & object destructure, module import and export, State, Props, Components, Lifecycle, Stateful and stateless components, Events, Router, Forms, Tables, Portals, CSS, Hook and new Features added in recent versions

Unit –V

Node JS: Creating Web Server, Functions, Buffer, Node Modules, Creating Web Server, Handling HTTP requests. **Express JS:** API methods - GET, POST, PUT, DELETE, Request & response objects, URL and Query parameters, Routing, Templates, middleware and the model-view-controller pattern.

Text Books:

BASIC ELECTRONICS AND SENSORS (Common for CSE and CSE - IOT & Cyber Security including Blockchain Technology)

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Prerequisite: Concepts of Semiconductor Physics and Applied Physics.

Course Objectives:

This course aims to:

- 1. Describe semiconductor device's principles and understand the characteristics of junction diode and transistors.
- 2. Understand working principles of Analog to Digital and Digital to Analog conversion.
- 3. Understand Interfacing of various modules myRIO.

Course Outcomes:

Upon completion of this course, students will be able to:

- 1. Identify various types of semiconductor devices for building electronic circuits.
- 2. Describe the operation of various sensors, data convertors and actuators.
- 3. Acquire the data from various sensors.
- 4. Analyze usage of sensors/actuators for the development of real-time applications.
- 5. Apply theoretical learning to implement practical real-time problems for automation.

CO-PO Articulation Matrix

UNIT-I

Diodes and its Applications: Overview of Semiconductors, Characteristics of P-N Junction diode, current equation. Characteristics of Zener Diode, Voltage regulator, Half Wave, Full Wave: Center tap, Bridge Rectifiers.

Display Systems: Constructional details of C.R.O and Applications.

UNIT-II

Bipolar Junction Transistors: Classification, Bipolar Junction Transistors Configurations. CE, CB Characteristics, h-parameters, Analysis of BJT amplifier using h-parameters in CE, CB configuration. Field Effect Transistor: Junction Field Effect Transistor: Principle of Operation, Characteristics of JFET and Operation of MOSFET.

UNIT- III

Op-Amps Circuits: Basic Principle, Ideal and practical Characteristics, Voltage Follower, Op-Amp parameters, Applications-Summer, Integrator, Differentiator, Instrumentation amplifiers, Logic Gates-IC's. Data Converters: Specifications, DAC- Weighted Resistor, R-2R Ladder, ADC-Parallel Comparator, Successive Approximation and Dual Slope(Qualitative treatment Only).

UNIT-IV

Sensors: Definition, classification, Proximity Sensors, Tacho generator as a Velocity, Optical encoder as motion and Strain Gauge as force Sensor; Temperature and light sensors, Collision Avoidance sensors. ROBOT Sensors: Sensors in robot – Touch sensors; Camera Systems in Machine: Camera Technology, History in Brief, Machine Vision versus closed Circuit Television (CCTV).

Actuators: Introduction, Types of actuators in IOT, Real life examples of actuators in IOT.

UNIT-V

Hardware/software platforms: Introduction to LabVIEW, Data Acquisition System: hardware Overview of my RIO, Converting Raw Data Values to a Voltage.

Sensors interfacing with my RIO: Introduction, Pin configuration, diagrams of thermistor, photo cell, hall effect, IR Range Finder, Bluetooth, Temperature Sensors.

Text Books:

Suggested Reading:

- 1. Arun K. Ghosh, Introduction to measurements and Instrumentation, PHI, 4th Edition 2012.
- Anindya Nag, Subhas Chandra Mukhopadhyay, Jurgen Kosel, Printed Flexible Sensors: Fabrication, Characterization and Implementation, Springer International Publishing, Year: 2019, ISBN: 978-3-030-13764-9,978-3-030-13765-6.

User guide and specifications NI myRIO-1900.

22ITC17

WEB TECHNOLOGIES

(Common to CSE, AI&DS and CET branches)

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Course Objectives:

This course aims to:

- 1. To understand how HTML, CSS, JavaScript and Bootstrap work together.
- 2. To explore various features of JS and its functionality.
- 3. To understand the basics of MongoDB and its Data Model.
- 4. To comprehend the new features of JS, role of React JS in responsive web application development.
- 5. To familiarize with configuration of NPM and backend integration with NODE JS and Express JS.

Course Outcomes:

Upon successful completion of this course, students will be able to:

- 1. Create web pages with good aesthetic sense of design using HTML CSS3, Bootstrap and popular themes.
- 2. Use JS in Validations and DOM manipulation.
- 3. Design Schema and perform CRUD operations from UI components.
- 4. Become an agile practitioner with the ability to quickly complete projects using ReactJS.
- 5. Build an end-to-end application from scratch using React JS, NODE JS, Express JS and Mongo DB.

AI TOOLS, TECHNIQUES AND APPLICATIONS

Instruction Duration of SEE SEE CIE Credits 2 L + 1 T Hours per Week 3 Hours 60 Marks 40 Marks 3

Prerequisite: Basic computer fundamentals

Course Objectives:

The objectives of this course are to:

- 1. Introduce fundamental concepts of AI.
- 2. Demonstrate the capabilities of AI applications.
- 3. Present various modeling and formulation techniques to solve problems using AI.
- 4. Introduce state-of-art tools and techniques.

Course Outcomes:

On successful completion of the course, students will be able to

- 1. Understand fundamental concepts of AI and its importance.
- 2. Identify various Machine Learning algorithms and their limitations.
- 3. Develop Chatbots based on requirements.
- 4. Analyze complex problems involving image processing, Computer Vision and HCI.
- 5. Understand smart solutions for various domains.

CO-PO Articulation Matrix

UNIT-I:

Introduction to Artificial Intelligence: Definition, importance of AI, application areas, state - of - the art in AI, overview of hard AI problems and challenges facing in the field of AI;

Machine Learning: Introduction, machine learning algorithms, machine learning in practice, testing, problems with machine learning, dangers of machine learning and benefits.

UNIT-II:

Natural Language Processing: Overview of NLP and components, applications, use cases of NLP and challenges.

Computer Vision: capabilities of computer vision, use of computer vision, computer vision on mobile devices, best practices and use cases, challenges.

UNIT – III

Building AI and Machine Learning Projects: Workflow of a ML project, data science project, data collection, data set preparation.

AI Technologies, Tools, Platforms: Tensor Flow, Scikit, PyTorch, Keras, Rapid Miner, AWS, Google Cloud AI, Azure, IBM Watson.

UNIT – IV

Chatbots: Introduction to chatbots, architecture of a chatbot, process build Chatbots, challenges in building successful Chatbots, best practices, industry case studies, Virtual assistants.

UNIT – V

Applications and Impact of AI: Smart applications, Current challenges, trends, opportunities, scalability, adversarial attacks on AI, adverse uses of AI, impact of AI on world's economy and its social implications.

AI Tools and Applications: Scikit-Learn, Tensor-Flow comparison and real applications.

ENGINEERING ECONOMICS AND ACCOUNTANCY

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Course Objectives:

This course aims to:

- 1. To demonstrate the importance of Managerial Economics in Decision Making.
- 2. To explain the concept of Accountancy and provide basic knowledge on preparation of Final accounts.
- 3. To understand the importance of Project Evaluation in achieving a firm's Objective.

Course Outcomes:

Upon completion of this Course, student will be able to:

- 1. Apply fundamental knowledge of Managerial Economics concepts and tools.
- 2. Analyze various aspects of Demand Analysis, Supply and Demand Forecasting.
- 3. Understand Production and Cost relationships to make best use of resources available.
- 4. Apply Accountancy Concepts and Conventions and preparation of Final Accounts.
- 5. Evaluate Capital and Capital Budgeting decision based on any technique.

CO-PO Articulation Matrix

UNIT-I

Introduction to Managerial Economics: Introduction to Economics and its evolution - Managerial Economics - its Nature and Scope, Importance; Relationship with other Subjects. Its usefulness to Engineers; Basic concepts of Managerial economics - Incremental, Time perspective, Discounting Principle, Opportunity Cost, Equimarginal Principle, Contribution, Negotiation Principle.

UNIT-II

Demand and Supply Analysis: Demand Analysis - Concept of Demand, Determinants, Law of demand - Assumptions and Exceptions; Elasticity of demand - Price, Income and Cross elasticity - simple numerical problems; Concept of Supply - Determinants of Supply, Law of Supply; Demand Forecasting - Methods.

UNIT-III

Production and Cost Analysis: Theory of Production - Production function - Isoquants and Isocosts, MRTS, Input-Output Relations; Laws of returns.

Cost Analysis: Cost concepts – Types of Costs, Cost-Output Relationship – Short Run and Long Run; Market structures – Types of Competition, Features of Perfect Competition, Price Output Determination under Perfect Competition, Features of Monopoly Competition, Price Output Determination under Monopoly Competition Break-even Analysis – Concepts, Assumptions, Limitations, Numerical problems.

Unit-IV

Accountancy: Book-keeping, Principles and Significance of Double Entry Bookkeeping, Accounting Concepts and Conventions, Accounting Cycle, Journalization, Ledger accounts, Trial Balance concept and preparation of Final Accounts with simple adjustments.

Unit-V

Capital and Capital Budgeting: Capital and its Significance, Types of Capital, Estimation of Fixed and Working capital requirements, Methods and sources of raising finance. Capital Budgeting, Methods: Traditional and Discounted Cash Flow Methods - Numerical problems.

Text Books:

- 1. Mehta P.L. "Managerial Economics: Analysis, Problems and Cases", Sultan Chand & Son's Educational publishers, 2016.

AI TOOLS, TECHNIQUES AND APPLICATIONS LAB

Instruction Duration of SEE SEE CIE Credits 2 P Hours per Week 3 Hours 50 Marks 50 Marks

Course Objectives:

The main objectives of this course are to:

- 1. Expose the students to AI related real world problems.
- 2. Familiarize students with AI tools and techniques.
- 3. Expose students with AI technologies and platforms.

Course Outcomes:

At the end of the course, students shall be able to

- 1. Demonstrate the capabilities of AI.
- 2. Build models for various real time problems using AI/ML Tools.
- 3. Develop Chatbots, programs for simple applications.
- 4. Analyze and interpret the experimentation results.
- 5. Develop skills to communicate the experimentation results.

CO 5	-	-	-	-	2	-	-	-	-	2	-	-	-	_	-

Lab Experiments:

- 1. Overview of AI, AI/ML project life cycle
- 2. Design/construct the workflow of a general AI project using draw.io
- 3. Train a ML model to recognize a Person or Object including gestures
- 4. Train a ML model to recognize various sound bytes and speech
- 5. Develop an app to recognize objects using image classification
- 6. Develop an Expression Match app using the trained ML model for facial expressions
- 7. Develop a Voice Authentication app tat uses a trained audio model of the user using audio classification to recognize the user's voice to authentication
- 8. Develop a conversational chatbot to automatically recognize speech, understand the intent of the user and generate a response accordingly using Amazon Lex
- 9. Design a program using Wolfram Language to classify Data (Numbers, Images, Colors) using automatic model selection
- 10. Design a program using the Wolfram Language to demonstrate Vector Encoding based Feature Extraction and Clustering for a dog image dataset

DESIGN AND ANALYSIS OF ALGORITHMS LAB

Instruction												
Duration of SEE												
SEE												
CIE												
Credits												

2 L Hours per Week 3 Hours 50 Marks 50 Marks

Pre-Requisites

Programming and Problem Solving, Basics of Data structures and algorithms lab and Object Oriented Programming.

Course Objectives

This course aims to:

- 1. Design and construct simple programs by using the different design strategies for solving different problems.
- 2. To enhance programming skills while improving their practical knowledge in implementing the algorithms.
- 3. To strengthen the practical ability and to apply suitable algorithmic approaches for solving real time problems

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Implement greedy, dynamic programming, backtracking and branch and bound techniques.
- 2. Demonstrate various algorithmic design techniques.
- 3. Analyze the performance of various algorithms.
- 4. Compare various design strategies.
- 5. Formulate solutions to solve real world problems use acquired knowledge.

CO-PO Articulation Matrix

The following task should be carried out by the students in the laboratory for each experiment:

- 1. Setup the environment for the experiment.
- 2. Select appropriate design technique to implement the problem.
- 3. Represent the solution using algorithm
- 4. Analyze the performance of the algorithm (Time and Space complexity)

Justify the performance of your solution is better than other strategies

- 1. You are given the task of choosing the optimal path to connect 'N' devices. The devices are connected with the minimum required N-1 wires into a tree structure, and each device is connected with the other with a wire of length 'L' i.e 'D₁' connected to 'D₂' with a wire of length 'L₁'. This information will be available forall 'N' devices.
 - a. Determine the minimum length of the wire which consists of N-1 wires that will connect all devices.
 - b. Determine the minimum length of the wire which connects D_i to all other devices where

1≤i≤N.

- 2. CSE department of CBIT want to generate a time table for 'N' subjects. The following information is given- subject name, subject code and list of subjects code which clashes with this subject. The problem is to identify the list of subjects which can be scheduled on the same time line such that clashes among them do not exist.
- 3. A Test has 'N' questions with a heterogeneous distribution of points. The test-taker has a choice as to which questions can be answered. Each question Q_i has points P_i and time T_i to answer the question, where 1≤i≤N. The students are asked to answer the possible subsets of problems whose total point values add up to a maximum score within the time limit 'T'. Determine which subset of questions gives student the highest possible score.
- 4. Given N items with their corresponding weights and values, and a package of capacity C, choose either the entire item or fractional part of the item among these N unique items to fill the package such that the package has maximum value.
- 5. Given a bunch of projects, where every project has a deadline and associated profit if the project is finished before the deadline. It is also given that every project takes one month duration, so the minimum possible deadline for any project is 1 month. In what way the total profits can be maximized if only one project can be scheduled at a time.
- 6. N-Queen is the problem of placing 'N' chess queens on an N×N chessboard. Design a solution for this problem so that no two queens attack each other.

Note: A queen can attack when an opponent is on the same row, column or diagonal.

7. Bi-connected graphs are used in the design of power grid networks. Consider the nodes as cities and the edges as electrical connections between them, you would like the network to be robust and a failure at one city should not result in a loss of power in other cities.

Credits

INTERNET TECHNOLOGIES LAB (Only for CET branch)

Instruction Duration of End Examination Semester End Examination Continuous Internal Evaluation 2 P Hours per week 3 Hours 50 Marks 50 Marks 1

Course Objectives:

This course aims to:

- 1. Build Strong expertise to develop front end applications using HTML5 and CSS3.
- 2. Become proficient in Bootstrap concepts.
- 3. Comprehend NoSQL Databases and MongoDB
- 4. Understand core features of JavaScript and React JS.
- 5. Learn Express JS and Node JS frameworks to develop responsive web applications.

Course Outcomes:

Upon successful completion of this course, student will be able to:

- 1. Build interactive and user-friendly static frontend UI applications using HTML, CSS and JavaScript.
- 2. Develop a web page based on Bootstrap.
- 3. Use MongoDB concepts in Web Application Development using React JS.
- 4. Create Single Page and multi-page Applications using React, Node JS, Express JS and MongoDB.
- 5. Implement MVC and responsive design to scale well across PC, tablet and Mobile Phone.

CO-PO Articulation Matrix

(Note: Setup a Node JS server in Visual Studio to run the following experiments applications)

List of Experiments:

- 1. Build a basic static website using HTML5, CSS3 and bootstrap components.
- 2. Explore the new features introduced in ES5 to recent.
- 3. Develop Functional and class components in React JS.
- 4. Demonstrate state and props in React JS.
- 5. Create an example component that implements Routing in Node JS
- 6. Design Blogging Platform using MERN (Mongo, Express, React JS and Node JS) and implement CRUD Operations.

Text Books:

- 1. Brad Dayley, Brendan Dayley, Caleb Dayley, "Node.js, MongoDB and React JS Web Development", 2nd edition, Perason Education, 2018.

BASIC ELECTRONICS AND SENSORS LAB (Common for CSE and CET)

Instruction Duration of SEE SEE CIE Credits 2 P Hours per Week 3 Hours 50 Marks 50 Marks

Prerequisite: Students should have prior knowledge of Applied Physics and Semiconductor Physics.

Course Objectives:

This course aims to:

- 1. Learn about various electronic components and devices.
- 2. Study the transistor characteristics in different modes.
- 3. Familiarize to use customizable software and modular measurement hardware to create user-defined measurement systems.

Course Outcomes:

Upon completion of this course, students will be able to:

- 1. Familiarize with basic electronic components, devices, and systems.
- 2. Formulate the research problems associate with Transistor or Op-amp circuits.
- 3. Examine the Interfacing of myRIO with various sensors/transducers, Motors.
- 4. Examine and Measure the problems encountered in Robots or sensor related systems.
- 5. Justify the solutions related with transistorized circuits for real-time applications.

CO-PO Articulation Matrix

List of Experiments:

- 1. Study of Semiconductor components, sensors, transducers.
- 2. Characteristics of Semiconductor Diodes.
- 3. CRO Applications.
- 4. Half Wave Rectifier with and without filters.
- 5. Full Wave Rectifiers with and without filters
- 6. Voltage Regulator using Zener diode.
- 7. CB Input and Output Characteristics.
- 8. FET Characteristics.
- 9. Operational Amplifiers Inverting Op-Amp, Adder.
- 10. Operational Amplifiers Integrator, Differntiator.
- 11. Interfacing LDR/Photo Resistor and LED with myRIO (Intensity control of LED with respect to Illumination).
- 12. Interfacing LM35, Thermistor, and Buzzer with myRIO. (Temperature Thresholding Application).
- 13. Interfacing IR Range Finder with myRIO. (Obstacle detection and Ranging).
- 14. Interfacing Motor with Motor Adapter using myRIO. (Motor momentum control).

- 15. Interfacing Accelerometer and Inbuilt accelerometer with myRIO. (Vibration calculation in specific axis).
- 16. Structured Enquiry: Design a switching circuit using BJT and analyse its operation.
- 17. **Open ended Enquiry:** Design a LED running lights circuit for vehicles to avoid accidents in fog/rain condition.

(Note: At least 12 experiments have to be performed.)

BLOCKCHAIN TECHNOLOGY

Instruction	3 Hours per week
Duration of SEE	3 Hours
SEE	60 Marks
CIE	40 Marks
Credits	3
Course Objectives:	

1. To get acquainted with the foundations of Bockchain.

2. To provide the significance of the bitcoin ecosystem.

3. To explore the consensus mechanisms and technologies that support ethereum.

4. To introduce Hyperledger Fabric and its architecture.

5. To familiarize Blockchain use cases in various domains.

Course Outcomes:

Upon successful completion of this course, students will be able to:

- 1. Define distributed systems and blockchain
- 2. Explain the concepts of bitcoin and consensus mechanisms in bitcoin mining.
- 3. Explore the consensus mechanisms and technologies that support Ethereum.
- 4. Describe Hyperledger Fabric architecture and Hyperledger Projects.
- 5. Analyse blockchain use cases in various domains.

Mapping of Course Outcomes with Program Outcomes and Program Specific Outcomes:

CO 5	3	3	2	2	3	-	2	-	-	2	-	1	3	3	3

UNIT-I

Blockchain Foundations: Overview of distributed systems, Introduction to Blockchain, Generic elements of a blockchain, Features of Blockchain, Applications of Blockchain, Hash Functions and Merkle Trees, Components of Blockchain Ecosystem, Cryptography and Consensus Algorithms; Types of Blockchain, Blockchain Platforms.

UNIT-II

Bitcoin Platform: Bitcoin definition, Keys and addresses, Public keys and Private keys in bitcoin, The transaction life cycle, The transaction structure, Bitcoin payments, Consensus mechanism in bitcoin,

Wallet types, Non-deterministic wallets, Deterministic wallets, Alternative Coins- Namecoin, Litecoin, Zcash

UNIT-III

Permissionless Blockchain Ethereum: Introducing Smart Contracts, Ethereum blockchain, The Ethereum stack, Ethereum virtual machine (EVM), Consensus mechanism in Ethereum, The Ethereum network, Ethereum Development, Setting up a development environment, Development tools and clients, Applications developed on Ethereum

UNIT-IV

Permissioned Blockchain Hyperledger Fabric : Introduction to Hyperledger Fabric, Hyperledger Fabric architecture, Membership services, Hyperledger Projects- Fabric, Sawtooth lake, Iroha, Components of the Fabric, Peers or nodes, Applications on Blockchain, Alternate Blockchains- Ripple, Corda.

UNIT-V

Case studies using Blockchain: Cross border payments, Know Your Customer (KYC), Food supplychain, Mortgage over Blockchain, Identity on Blockchain, Blockchain in Insurance Industry, Education, Healthcare, realestate management and Metaverse

CYBER THREAT INTELLIGENCE

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

Introduction to Cybersecurity, Basic Networking Concepts, Foundations of Information Security

Course Objectives

- 1. Understand the role and importance of threat intelligence in cybersecurity.
- 2. Identify and analyze different types of cyber threats and threat actors.
- 3. Utilize tools and techniques for collecting, analyzing, and managing threat intelligence.
- 4. Develop and implement strategies for integrating threat intelligence into cybersecurity operations.
- 5. Communicate threat intelligence findings effectively to various stakeholders.

Course Outcomes

By the end of this course, students should be able to:

- 1. Understand the role and importance of threat intelligence in cybersecurity and master the threat intelligence lifecycle.
- 2. Identify and analyze various cyber threats, threat actors, and their tactics, techniques, and procedures.
- 3. Utilize a range of tools and techniques for the collection, analysis, and management of threat intelligence effectively.
- 4. Develop strategies for integrating and operationalizing threat intelligence into cybersecurity operations to enhance organizational security posture.
- 5. Communicate threat intelligence findings clearly to various stakeholders and understand the significance of legal and ethical considerations in intelligence sharing.

CO-PO Articulation Matrix

Unit – I

Introduction to Threat Intelligence - Overview of Threat Intelligence, Definition and Scope of Threat Intelligence, The Importance of Threat Intelligence in Cybersecurity, Threat Intelligence Lifecycle, Collection, analysis, dissemination, and Feedback, Intelligence Requirements and Planning, Types of Threat Intelligence, Strategic, tactical, operational, and technical intelligence

Unit – II

Understanding Threats and Actors - Cyber Threats and Attack Vectors, Malware, phishing, ransomware, DDoS attacks, etc., Threat Actors and Their Motivations, Cybercriminals, nation-states, hacktivists, insiders,

Tactics, Techniques, and Procedures (TTPs), MITRE ATT&CK framework, Case studies of notable cyberattacks.

Unit – III

Collecting and Analyzing Threat Intelligence - Intelligence Collection Methods, Open-source intelligence (OSINT), human intelligence (HUMINT), technical intelligence (TECHINT), Threat Intelligence Platforms (TIPs) and Tools, Introduction to popular TIPs and their functionalities, Analyzing Threat Data, Data analysis techniques and tools, Creating actionable intelligence.

Unit – IV

Integrating Threat Intelligence - Threat Intelligence Feeds, Sources, and types of feeds, integrating feeds into security tools, Operationalizing Threat Intelligence, use cases in security operations, incident response, and risk management, Sharing and Disseminating Intelligence, Intelligence sharing standards (STIX, TAXII), Legal and ethical considerations in sharing threat intelligence.

Unit – V

Advanced Topics and Practical Applications - Advanced Persistent Threats (APTs) and Campaign Analysis, Understanding APTs, their methodologies, and defense strategies, Practical Exercises and Simulations, Hands-on exercises using threat intelligence tools and datasets, future scope of threat intelligence.

Textbook:

- 7. "Advanced Threat Intelligence" on Cybrary.

22CIC07

Industrial Internet of Things Systems

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60Marks 40Marks 3

Pre-Requisites

Computer Architecture and Micro Processor, Programming for Problem Solving.

Course Objectives

- 1. Understand the basics of IoT and IIOT.
- 2. Impart necessary and practical knowledge in Industrial Internet of Things.
- 3. Develop skills required to build real-time IIoT based projects.

Course Outcomes

By the end of this course, students should be able to:

- 1. Understand Internet of Things and IIOT basics components.
- 2. Illustrate working of I/O devices, sensors & communication module.
- 3. Analyse the use of protocols in IoT.
- 4. Interface I/O devices, Sensors & communication module
- 5. Develop real time IoT based projects.

CRYPTOGRAPHY AND NETWORK SECURITY

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

Data Communication and Computer Networks.

Course Objectives

- 1. To provide an understanding of security concepts and cryptographic techniques in the context of network security.
- 2. To provide with a comprehensive understanding of symmetric and asymmetric key ciphers.
- 3. To provide an understanding of cryptographic hash functions and key management techniques.
- 4. To describe IP Security protocols and wireless network security mechanisms.
- 5. To provide with an in-depth understanding of email security, transport-level security protocols, and emerging trends in cryptography and network security.

Course Outcomes

By the end of this course, students should be able to:

- 1. Demonstrate knowledge of fundamental security concepts, including the importance of security, common security approaches, principles of security, and types of security attacks.
- 2. Examine cryptographic techniques, including substitution and transposition techniques, encryption and decryption algorithms, and symmetric and asymmetric key cryptography.
- 3. Analyse commonly used hash functions, such as the Secure Hash Algorithm (SHA) and Message Digest Algorithm (MD), key management techniques and evaluate their cryptographic properties and suitability for different applications.
- 4. Analyse the knowledge of IP Security protocols and web security considerations to assess the importance of securing web-based communication channels against common threats.
- 5. Design and implement secure communication systems and protocols that incorporate email security mechanisms, transport-level security protocols, and emerging cryptographic techniques to address specific security requirements and challenges in networked environments.

CO-PO Articulation Matrix

Unit – I

Security Concepts: Introduction: The need for security, Security approaches, Principles of security, Types of Security attacks, Security services, Security Mechanisms, A model for Network Security.

Cryptography Concepts and Techniques: Introduction, plain text and cipher text, substitution techniques, transposition techniques, encryption and decryption, symmetric and asymmetric key cryptography, steganography.

Unit – II

Symmetric key Ciphers: Block Cipher principles, DES, AES, Block cipher operation, Stream ciphers, RC4. **Asymmetric key Ciphers:** Principles of public key cryptosystems, RSA algorithm, Diffie-Hellman Key Exchange, Elgamal Cryptography.

Unit – III

Introduction to Cryptographic Hash Functions: Definition and properties, Commonly Used Hash Functions-Secure Hash Algorithm and Message Digest Algorithm, Applications of Cryptographic Hash Functions-Digital signatures.

Key Management and Distribution: Symmetric Key Distribution Using Symmetric & Asymmetric Encryption, Distribution of Public Keys, Kerberos, X.509 Authentication Service, Public – Key Infrastructure.

Unit – IV

IP Security: IP Security overview, IP Security architecture, Authentication Header, Encapsulating security payload, combining security associations, Internet Key Exchange.

Wireless Network Security: Wireless Security, Mobile Device Security, IEEE 802.11 Wireless LAN, IEEE 802.11i Wireless LAN Security.

Unit – V

Transport-level Security: Web security considerations, Secure Socket Layer and Transport Layer Security, HTTPS, Secure Shell (SSH).

E-Mail Security: Pretty Good Privacy, S/MIME, Privacy Enhanced Mail.

Emerging Trends in Cryptography and Network Security: Quantum Cryptography, Homomorphic Encryption, Blockchain and Distributed Ledger Technology.

Textbook:

- 1. Cryptography and Network Security Principles and Practice: William Stallings, Pearson Education, 7th Edition.
- 2. Cryptography and Network Security: Atul Karate, Mc Graw Hill, 3rd Edition.

Reference Books

- 1. Cryptography and Network Security: C K Shyamala, N Harini, Dr T R Padmanabhan, Wiley India, 1st Edition.
- 2. Cryptography and Network Security: Forouzan Mukhopadhyay, Mc Graw Hill, 3rd Edition.
- 3. Information Security, Principles, and Practice: Mark Stamp, Wiley India.
- 4. Principles of Computer Security: WM. Arthur Conklin, Greg White, TMH.
- 5. Introduction to Network Security: Neal Krawetz, CENGAGE Learning.
- 6. Network Security and Cryptography: Bernard Menezes, CENGAGE Learning.

22CSC15N

OPERATING SYSTEMS

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

Computer Architecture and Programming Fundamentals.

Course Objectives

This course aims to:

- 1. Understand the basic concepts and design of an operating system.
- 2. Interpret the structure and organization of the file system.
- 3. Learn Inter Process Communication mechanisms and memory management approaches.
- 4. Explore cloud infrastructures and technologies.

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Understand the basics of Operating systems and its major components.
- 2. Illustrate the concepts related to process management.
- 3. Distinguish various memory management techniques.
- 4. Apply concepts of process synchronization and deadlocks to a given situation.
- 5. Evaluate various file allocation methods and security as well as recovery features in designing Operating system.

CO-PO Articulation Matrix

Unit –I

Introduction to Operating Systems: Computer System overview, Components of a computer system, functions of OS, Examples and different types of OS (RTOS vs. desktop vs. mobile etc.), OS distributions and versions. **OS architectures:** Micro-kernel, Layered, Kernel Approaches and examples.

Unit –II

Process management: Program vs. process, process states, Process Control Block (PCB), OS services and system calls (fork, wait, exec, getpid, getppid etc.), system calls vs. System programs, Process scheduling-Process context switching, scheduling algorithms, scheduling criteria. **Inter Process Communication:** Linux IPC Mechanisms, RPC, RPC exception handling and Security issues.

Unit –III

Memory Management: Memory view of a process, Process memory usage requirements, virtual and physical memory related system calls (mmap, munmap, sbrk, mprotect). Address translation mechanisms --- static mapping, segmentation, paging, page faults, page replacement algorithms, page sharing, read/write permissions, swapping. **Secondary Memory Management:** Disk structure, disk scheduling, disk management, buffering, swap space management.

Unit –IV

Concurrency and Synchronization: Introduction to threads, benefits, types and thread APIs, Synchronization, issues, hardware and software solutions for synchronization, Classical problems of synchronization. **Deadlocks:** Introduction, necessary conditions for deadlock occurrence, RAG, deadlock handling mechanisms - prevention, avoidance and recovery.

Unit –V

File Systems: File concepts, file types, allocation and organization methods, file handling system calls, File system metadata, directory structure, caching optimizations File Systems case study. **OS Security and Case Studies:** Types of threats in OS, basic security mechanisms, malware taxonomy, viruses, worms, and rootkits; Defense: overview, logging, auditing, and recovery, OS-level memory protection. Linux/Unix OS Design and architecture, Unix Shell.

22CSC18N

OPERATING SYSTEMS LAB

Instruction Duration of SEE SEE CIE Credits 2 P Hours per Week 3 Hours 50 Marks 50 Marks

Pre-Requisites

Operating systems, Programming for problem solving.

Course Objectives

This course aims to:

- 1. Explore Unix/Linux operating system.
- 2. Analyze various system calls available in Linux/Unix.

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Understand Linux/Unix environment.
- 2. Identify and interpret various system programs.
- 3. Understand and implement shell programming.
- 4. Simulate memory management, file allocation techniques and process schedules.
- 5. Analyze process and file management system calls by creating and/or modifying concurrent programs.

CO-PO Articulation Matrix

List of Experiments:

- 1. Demonstration of Linux/Unix file related system calls: mkdir, link, unlink, mount, unmount, users+, chown, chmod, open, close, read, write, lseek, stat, sync.
- 2. Demonstration of Linux/Unix process related system calls: fork, wait, exec, exit, getpid, getuid, setuidbrk, nice, sleep.
- 3. Shell programming.
- 4. Implement CPU scheduling algorithms (a) Round Robin (b) SJF (c) FCFS.
- 5. Implement page replacement algorithms (a) FIFO (b) LRU.
- 6. Programs to illustrate threads.
- 7. Demonstration of GNU/Linux IPC mechanisms- Pipes, Semaphores, Shared memory.
- 8. Implementation of Classical Problems for synchronization (Dining philosopher problem and Producer- Consumer problem).
- 9. Implementation of Bankers algorithm for Deadlock detection and avoidance.
- 10. Implementation of Linked, Indexed and Contiguous file allocation methods.
- 11. Development of applications using Linux/Unix system calls: signal, socket, accept, snd, recv, connect.

Text Books:

1. Galvin, Silberschatz, "Operating System Concepts", 10th Edition, John Wiley & Sons, 2018.

22CIC10

CRYPTOGRAPHY AND NETWORK SECURITY LAB

Instruction Duration of SEE SEE CIE Credits 2 L Hours per Week 3 Hours 50 Marks 50 Marks 1

Pre-Requisites

Data Communication and Computer Networks, Programming and Problem Solving.

Course Objectives

- 1. To implement various substitution and transposition techniques used in encryption and decryption.
- 2. To implement the algorithms for Symmetric and Asymmetric encryption.
- 3. To implement Diffie-Hellman key exchange algorithm to securely exchange secret keys between two parties.
- 4. To analyse the properties and applications of cryptographic hash functions in data integrity verification and digital signatures.
- 5. To demonstrate the use of Intrusion Detection Systems (IDS) using tools like Snort for network security monitoring.

Course Outcomes

By the end of this course, students should be able to:

- 1. Demonstrate the ability to apply encryption and decryption methods utilizing substitution and transposition techniques.
- 2. Apply symmetric and asymmetric key Algorithms, for secure data encryption/decryption, and analyse their performance and security in real-world encryption contexts.
- 3. Implement the Diffie-Hellman key exchange algorithm for secure key exchange over insecure channels and develop/test digital signature systems using the Digital Signature Standard (DSS).
- 4. Evaluate the security properties and suitability of cryptographic hash functions (MD5, SHA-512) for different applications.
- 5. Demonstrate the ability to deploy and configure Intrusion Detection Systems (IDS) for network security monitoring.

22CIE01

OOPS THROUGH JAVA

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

Basic programming skills and an understanding of fundamental concepts like variables, loops, and functions are recommended.

Course Objectives

- 1. Learn the fundamental concepts of OOP such as classes, objects, encapsulation, inheritance, and polymorphism, and how they are implemented in Java.
- 2. Design and implement Java applications using OOP principles, applying effective programming practices such as encapsulation, modularity, and reusability.
- 3. Utilize exception handling techniques like try-catch blocks and custom exceptions, and understand multithreading concepts to create Java applications that handle errors and can perform concurrent tasks.
- 4. Use Java's collection interfaces and classes, including List, Set, and Map, to organize, manage, and manipulate data in Java applications.
- 5. Design simple GUIs using Java Swing components such as buttons, text fields, and labels, and implement event handling to make interactive Java applications.

Course Outcomes

By the end of this course, students should be able to:

- 1. Understand the foundational principles of Object-Oriented Programming.
- 2. Design and implement Java applications using OOP concepts.
- 3. Apply exception handling and multithreading in Java applications.
- 4. Utilize the Java Collection Framework to manage data.
- 5. Create simple graphical user interfaces (GUIs) with Swing.

CO-PO Articulation Matrix

Unit – I

Introduction to Java and OOP Principles, History of Java and Java Basics, Overview of Java history and its significance, Bytecode and Java Virtual Machine (JVM), Setup of development environments, OOP Principles, Concepts of classes and objects, Encapsulation, inheritance, and polymorphism, Java data types, variables, and scope, Control Structures and Type Casting, Operators and control statements, Type conversion and type casting, Arrays and array manipulation.

Unit – II

Classes, Objects, and Methods, Defining and Using Classes, Creating and using custom classes, Static variables and methods, Understanding garbage collection, Methods, and Overloading, Creating methods and constructors, Method overloading and constructor overloading, Usage of this keyword, Access Control and the String Class, Access modifiers, Working with the String class, String manipulation and String Tokenizer.

Unit – III

Inheritance, Abstract Classes, and Interfaces- Inheritance and Superclasses, Basics of inheritance and its types, Usage of super keyword, Method overriding and the final keyword, Abstract Classes and Interfaces, Concepts of abstract classes and interfaces, Differences between abstract classes and interfaces, Implementing interfaces in Java, Packages and Access Control, Creating and importing packages, Access control in packages, Organizing code with packages.

Unit – IV

Exception Handling and Multithreading- Exception Handling in Java, Concepts of exception handling, Usage of try-catch, throw, throws, and finally, Creating custom exceptions, Concepts of multithreading, Creating threads using Thread and Runnable Synchronization and thread communication.

Unit – V

Overview of collection interfaces, List, Set, Map-Using ArrayList, LinkedList, HashSet, and HashMap-Accessing collections with iterators, GUI Programming with Swing-Basic GUI concepts and Swing components, Handling events and creating applets, Simple GUI programs with JButton, JLabel, and JTextField, Advanced GUI Controls- Working with complex Swing components JComboBox, JTabbedPane, Event handling with listeners.

22CIE02

OOPS THROUGH JAVA LAB

Instruction Duration of SEE SEE CIE Credits 2 P Hours per Week 3 Hours 50 Marks 50 Marks 1

Pre-Requisites

Basic programming skills and an understanding of fundamental concepts like variables, loops, and functions are recommended.

Course Objectives

- 1. Set Up and Use Java Development Tools to write, compile, and run Java programs.
- 2. Apply control structures, arrays, and other basic Java syntax to solve programming problems.
- 3. Design and implement Java programs using classes, objects, inheritance, and polymorphism.
- 4. Apply exception handling techniques and create multithreaded programs in Java.
- 5. Develop Java Collection Framework, file input/output, serialization, and create GUI applications

Course Outcomes

By the end of this course, students should be able to:

- 1. Demonstrate proficiency in using integrated development environments (IDEs) for Java development.
- 2. Develop Basic Java programs that include control structures, arrays, and basic data manipulation.
- 3. Implement Java applications using object-oriented principles, including classes, objects, inheritance, and interfaces.
- 4. Create Java applications with exception handling and multithreading capabilities.
- 5. Design and implement graphical user interfaces using Java Swing and handle events.

CO-PO Articulation Matrix

Lab Experiments

Program 1: Set up a Java development environment and understand basic program structure.

- 1. Install a Java development environment (e.g., IntelliJ IDEA, Eclipse).
- 2. Write a simple program that prints "Hello, World!" to the console.
- 3. Compile and run the program, ensuring there are no errors.
- 4. Modify the program to take user input and display a personalized greeting.

Program 2: Practice using control structures and arrays in Java.

- 1. Write a program that calculates the factorial of a given number using a loop.
- 2. Create an array of integers and initialize it with some values.
- 3. Write a loop to sum the elements of the array and print the result.
- 4. Implement a simple program that uses if-else and switch statements.

Program 3: Understand how to define and use classes and objects in Java.

- 1. Define a **Person** class with fields for **name** and **age**.
- 2. Create constructors for the class and include a method to print the person's information.
- 3. Create instances (objects) of the **Person** class in a separate main class.
- 4. Write a program that creates and manipulates objects of the **Person** class.

Program 4: Explore constructors and method overloading.

- 1. Extend the **Person** class from the previous lab to include multiple constructors.
- 2. Create a method to set the age and overload it to accept different data types (e.g., integer, string).
- 3. Write a program that uses different constructors and overloaded methods to demonstrate the flexibility of OOP.

Program 5: Implement inheritance and demonstrate polymorphism.

- 1. Create a **Student** class that inherits from **Person**.
- 2. Add additional fields and methods specific to **Student**.
- 3. Override a method from the **Person** class to demonstrate polymorphism.
- 4. Write a program that creates objects of both **Person** and **Student** types and calls the overridden method.

Program 6: Understand abstract classes and interfaces.

- 1. Create an abstract class **Animal** with an abstract method **makeSound**.
- 2. Create a concrete subclass **Dog** that implements the **makeSound** method.
- 3. Define an interface **Pet** with a method **play**.
- 4. Implement the **Pet** interface in the **Dog** class, demonstrating multiple inheritance.
- 5. Write a program that creates objects of **Dog** and calls both the abstract and interface methods.

Program 7: Learn to handle exceptions in Java.

- 1. Write a program that performs division, handling division-by-zero exceptions with **try-catch**.
- 2. Create a custom exception class for invalid inputs.
- 3. Use **throw** and **throws** to signal and handle exceptions.
- 4. Demonstrate the use of **finally** for resource cleanup.

Program 8: Implement multithreading and explore synchronization.

- 1. Write a program that creates multiple threads using the **Runnable** interface.
- 2. Implement synchronization to avoid race conditions using synchronized blocks or methods.
- 3. Demonstrate inter-thread communication with wait, notify, and notifyAll.
- 4. Create a simple producer-consumer program to illustrate synchronization.

Program 9: Work with file input/output and serialization in Java.

- 1. Write a program to read from and write to a text file.
- 2. Implement object serialization and deserialization.
- 3. Create a program that reads data from a CSV file and processes it.
- 4. Demonstrate error handling during file I/O operations.

Program 10: Utilize Java's collection interfaces and classes.

- 1. Write a program that uses **ArrayList** to manage a list of items.
- 2. Implement a simple application that uses a **HashMap** to store key-value pairs.
- 3. Create a program that demonstrates the use of **Set**, showing unique elements.
- 4. Use iterators to traverse and manipulate collections.

Program 11: Design simple graphical user interfaces with Java Swing.

- 1. Create a basic GUI with components like **JButton**, **JLabel**, and **JTextField**.
- 2. Implement event handling for button clicks and text field inputs.
- 3. Design a simple Swing-based application with a basic layout.
- 4. Create an applet that demonstrates Swing components.

22CIE03

DIGITAL FORENSICS

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

A foundational grasp of computer hardware, software, networking, basic programming (Python, C++, Java), cryptography, and virtual machines.

Course Objectives

- 1. Gain a thorough understanding of digital forensics principles, various types of digital evidence, and the impact of cybercrime on individuals and organizations.
- 2. Learn the systematic approaches and best practices for conducting digital investigations, utilizing advanced forensic tools and techniques.
- 3. Develop the skills to analyze and secure networks against cyber threats, exploring the intricacies of network forensics and implementing effective security measures.
- 4. Understand the legal aspects surrounding digital evidence, including admissibility in court, privacy laws, and ethical considerations for expert witnesses.
- 5. Prepare and present digital evidence findings in a clear, concise, and legally sound manner, enhancing the understanding of digital forensics in the judicial process.

Course Outcomes

By the end of this course, students should be able to:

- 1. Explore the core principles of digital forensics, the various types of digital evidence, and their role in cybercrime investigations.
- 2. Apply a systematic approach to conducting digital investigations, utilizing appropriate forensic tools and techniques for evidence collection and analysis.
- 3. Analyze network traffic and identify potential security breaches using network forensics tools and best practices.
- 4. Evaluate the legal implications surrounding digital evidence, including admissibility and privacy concerns.
- 5. Demonstrate digital evidence findings professionally and ethically, effectively communicating technical details to a non-technical audience.

CO5	3	2	3	3	2	-	-	-	-	-	3	2	2	1	3

CO-PO Articulation Matrix

Unit – I

Foundations of Digital Forensics- Introduction to Digital Forensics, Digital Evidence, Increasing Awareness of Digital Evidence, Digital Forensics- Past, Present, and Future, Principles of Digital Forensics, Challenging Aspects of Digital Evidence, Cyber Trail, Language of Computer Crime Investigation.

Unit – II

The Digital Investigation Process- Role of Computers in Crime, Evidence in the Courtroom, Duty of Experts, Admissibility of Digital Evidence, Levels of Certainty in Digital Forensics, Imaging Techniques, Internet Artifacts, Browser & Mail Artifacts, Direct vs. Circumstantial Evidence, Scientific Evidence in Digital Forensics.

Unit – III

Advanced Forensic Techniques and Legal Aspects- Conducting Digital Investigations, Digital Investigation Process Models, Scaffolding for Digital Investigations, Applying the Scientific Method in Digital Investigations, Investigative Scenario- Security Breach, File Analysis- Image, Audio, Video, Archives, Documents, Graphical Investigation Environments- PyFLAG, Fiwalk, Forensic Ballistics and Photography, Face, Iris, and Fingerprint Recognition, Digital Evidence Controls, Evidence Handling Procedures, Basics of Indian Evidence ACT, IPC, and CrPC, Electronic Communication Privacy ACT, Legal Policies, Anti-Forensics Detection.

Unit – IV

Network Device Forensics and Security- Network Basics for Digital Investigators, Applying Forensic Science to Networks, Digital Evidence on the Internet, Digital Evidence on Physical, Data-Link, Network and Transport Layers, Notable Security Breaches, Securing Web Applications, Services, and Servers, Basic Security for HTTP Applications and Services, Basic Security for SOAP Services, Identity Management and Web Services, Authorization Patterns, Internet Governance.

Unit – V

Cybersecurity Safeguards and Professional Practices- Preventing Cyber Attacks, General Data Protection Regulation (GDPR), Threat Management, Deception, Denial of Service Filters, Understanding Data Recovery, Conducting an Investigation, Completing the Case, Data Acquisition, Storage Formats for Digital Evidence, Using Acquisition Tools, Validating Data Acquisitions, Performing RAID Data Acquisitions, Report Writing and Expert Testimony in High Tech Investigations, Preparing for Testimony, Applying Ethics and Codes to Expert Witnesses, Google Forensics.

DIGITAL FORENSICS LAB

Instruction Duration of SEE SEE CIE Credits 2 P Hours per Week 3 Hours 50 Marks 50 Marks 1

Pre-Requisites

A comprehensive grasp of computer fundamentals including hardware, software, networking, basic programming in languages like Python, C++, Java, fundamental cryptography concepts, and virtual machine operation.

Course Objectives

- 1. Provide hands-on experience in setting up and using a digital forensics laboratory for investigative purposes.
- 2. Develop practical skills for securely acquiring and analyzing digital evidence.
- 3. Deepen understanding of internet artifacts and their significance in digital investigations.
- 4. Apply advanced forensic techniques for analyzing and authenticating various forms of digital data.
- 5. Develop a comprehensive knowledge of network forensics, incident response protocols, and ethical practices in cybersecurity.

Course Outcomes

By the end of this course, students should be able to:

- 1. Set up and effectively use a digital forensics laboratory to conduct investigations.
- 2. Securely acquire and analyze digital evidence in compliance with industry standards.
- 3. Examine internet artifacts and related digital evidence to draw insights into user behavior and potential cybercrimes.
- 4. Utilize advanced forensic tools and techniques for data recovery, analysis, and digital data authentication.
- 5. Conduct network forensics, implement incident response procedures, and apply ethical principles in cybersecurity practices.

CO5	2	3	3	3	2	1	2	2	1	-	2	3	3	2	2

CO-PO Articulation Matrix

Lab Experiments

- 1. Set up a digital forensics' lab with tools like Autopsy and FTK Imager to create a foundational environment for conducting forensic analysis.
- 2. Ensure secure digital evidence acquisition through disk imaging techniques using tools like dd and FTK Imager to prevent data contamination.
- 3. Utilize Autopsy to recover and analyze deleted files, focusing on understanding the file system structure and identifying recoverable data.

- 4. Extract and analyze internet artifacts such as browser history and emails to reconstruct user activity and identify potential evidence.
- 5. Classify different types of evidence, including direct and circumstantial, through case studies to enhance understanding of their forensic significance.
- 6. Apply advanced data recovery techniques, including file carving and signature analysis, using tools like Foremost or Scalpel to retrieve hidden or fragmented data.
- 7. Authenticate multimedia files by extracting and analyzing metadata, checking for signs of tampering, and confirming the originality of digital content.
- 8. Investigate mobile device forensics by analyzing data from a mobile device emulator to understand the challenges unique to mobile platforms.
- 9. Capture and analyze network traffic using Wireshark to detect unusual patterns, identify potential threats, and trace malicious activities.
- 10. Examine web application attacks through log analysis, focusing on detecting signs of intrusion and identifying vulnerable components in a web application.

Textbook:

22CAE12

ARTIFICIAL INTELLIGENCE and MACHINE LEARNING

Instruction Duration of SEE SEE CIE Credits 4 L Hours per Week 3 Hours 60 Marks 50 Marks 4

Pre-Requisites

Knowledge on linear algebra, algorithms

Course Objectives

This course aims to

- 1. To get the students acquainted with the concepts of different searching techniques of AI systems.
- 2. To understand the various Machine Learning Algorithms.
- 3. To familiarize various Classification and Regression techniques.

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Define the concept of Artificial Intelligence.
- 2. Apply real life problems in a state space representation so as to solve them.
- 3. Understand the features of machine learning to apply on real world problems.
- 4. Compare and contrast Classification and Regression problems.
- 5. Apply unsupervised learning algorithms to solve real world problems.

PO/RSO CO	РО 1	PO 2	PO 3	PO 4	РО 5	PO 6	РО 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3

CO 5	3	2	3	1	-	-	-	-	-	-	-	3			

CO-PO Articulation Matrix

Unit – I

Introduction: Foundations of AI, History, State of the Art, Risks and Benefits.**Intelligent agents:** Agents and Environment, The Concept of Rationality, Structure of an Agent.Solving problems by Search: Problem-Solving Agents, State space representation, Search graph and Search tree Searching for Solutions.

Unit – II

Uninformed Search Strategies: Breadth-first search, Uniform cost search, Depth- first search, Iterative deepening Depth-first search, Bidirectional search.**Informed (Heuristic) Search Strategies**: Heuristic Functions, Hill- climbing, Greedy best-first search, A* search, **Adversarial Search:** Game Theory, Alpha–Beta Pruning, Constraint Satisfaction Problems.

Unit – III

Machine Learning : What is Machine Learning, Types of Machine Learning Algorithms- Supervised, Unsupervised and Reinforcement Learning. Feature Selection and Feature Engineering: Data sets, Creating training and test sets, managing categorical data, missing features, data scaling and normalization,

Whitening, Feature selection and filtering, PCA, Visualization of high-dimensional datasets; **Regression Algorithms:** Linear models for regression, Regression types, Evaluation Metrics, Hyper parameter tuning, Grid and Random search.

Unit – IV

Linear Classification Algorithms: KNN, logistic regression, classification metrics, ROC curve.Naïve Bayes : Bayes theorem, Naïve Bayes classifiers- Multinomial, Bernoulli and Gaussian .Support Vector Machines: Linear SVM, Kernel-based classification. Decision Trees and Ensemble Learning: Binary Decision trees, Introduction to Ensemble Learning-Bagging, Random Forests, AdaBoost, Gradient Tree Boosting, Voting classifier.

Unit – V

Clustering Fundamentals: Basics, Gaussian mixture, K-means, Evaluation methods, DBSCAN, Spectral Clustering, Hierarchical Clustering. **Introduction to Neural Networks:** Introduction to deep learning, MLPs with Keras, deep learning model layers, introduction to Tensorflow.

Textbook:

22CAE13

ARTIFICIAL INTELLIGENCE and MACHINE LEARNING LAB

Instruction Duration of SEE SEE CIE Credits 2 L Hours per Week 3 Hours 50 Marks 50 Marks

Pre-Requisites

Course Objectives

- 1. Make use of Data sets in implementing the machine learning algorithms.
- 2. Implement the machine learning concepts and algorithms in any suitable language of choice.
- 3. Make use of real world data to implement machine learning models.

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Understand basic components of library environment and installations and design heuristics to solve real world problems.
- 2. Implement problems using game search algorithms.
- 3. Recognize and implement various ways of selecting suitable model parameters for different machine learning techniques.
- 4. Implement and evaluate various Machine Learning approaches.
- 5. Design and develop solutions to real world problems using ML techniques.

PO/PSO CO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3

CO-PO Articulation Matrix

LIST OF EXPERIMENTS:

- 1. Identification and Installation of python environment towards the artificial intelligence and machine learning, installing python modules/Packages Import scikitlearn, keras etc.
- 2. Implement A* algorithm on any problem.
- 3. Implement an 8-puzzle solver using Heuristic search technique.
- 4. Implement the Constraint Satisfaction problem using backtracking
- 5. Implement a program for game search
- 6. Build linear regression model using gradient descent, least squares, polynomial, LASSO and RIDGE approaches also compare all the algorithms and draw a table for all the metrics.
- 7. Demonstration of Logistic Regression for a sample training data set stored as a .CSV file. Calculate the accuracy, precision, and recall for your dataset.
- 8. Demonstration of Naïve Bayesian classifier for a sample training data set stored as a .CSV file.

Calculate the accuracy, precision, and recall for your dataset.

- 9. Build the decision tree classifier compare its performance with ensemble techniques like random forest, bagging, boosting and stacking Demonstrate it with different decision trees.
- 10. Demonstration of SVM and use for character recognition task.
- 11. Demonstration of Clustering algorithms k-Means, Agglomerative and DBSCAN to classify for the standard datasets

Textbook:

- 1. Russell, Norvig, "Artificial Intelligence: A Modern Approach", Pearson Education, 2nd Ed., 2015.
- 1. Giuseppe Bonaccorso, "Machine Learning Algorithms", 2nd Edition, Packt, 2018.

22ITE04

MOBILE APPLICATION DEVELOPMENT (Professional Elective – I)

Instruction Duration of SEE SEE CIE Credits 3 Hours per week 3 Hours 60 Marks 40 Marks

Course Objectives

- 1. To Introduce the Kotlin Programming Language for Mobile Application Development.
- 2. To demonstrate the development of basic mobile applications on android operating system.
- 3. To implement the design using specific mobile development frameworks.
- 4. To Demonstrate the Location based services in mobile application design.
- 5. To demonstrate their ability to deploy the mobile applications in marketplace for distribution.

Course Outcomes

Upon completing this course, students will be able to:

- 1. Understand the benefits of using Kotlin for Mobile application development.
- 2. Design user interface for mobile applications.
- 3. Use Intent, Broadcast receivers and Internet services in Android App.
- 4. Use multimedia, camera and Location based services in Android App.
- 5. Apply best practices to implement database and publish apps on Playstore.

CO-PO Articulation Matrix

Unit –I

Introduction to Kotlin - Basic expressions - Control flow statements - null safety – Functionspassing functions as arguments - simple lambdas. Object oriented programming in Kotlin - Classes and Objects – Constructors - Visibility modifiers - Subclasses and Inheritance – Interfaces - Data classes - Singleton class – Pairs- Triples.

Unit –II

Introduction to Android Architecture: History - Features and Android Architecture – Android SDK Tools - Application Components - User Interface Design - Views - View Groups – Layouts - Event Handling – Listeners – Adapters – Menus - Action Bars – Android Localization.

Unit –III

Intents and Broadcasts: Intent – Using intents to launch Activities, Explicitly starting new Activity, Implicit Intents, Passing data to Intents, Getting results from Activities, Native Actions, using Intent to dial a number or to send SMS. Broadcast Receivers – Using Intent filters to service implicit Intents, Resolving Intent filters, finding and using Intents received within an Activity. Notifications – Creating and Displaying notifications, Displaying Toasts.

Unit –IV

Camera –Playing audio/video - Media recording - Sensors - Listening to sensor readings – Bluetooth - Android Communications – GPS - Working with Location Manager, Working with Google Maps extensions - Maps via intent - Location based Services - Location Updates - Location Providers - Selecting a Location Provider - Finding Location.

Unit –V

Content Providers – Uri - CRUD access –Browser – CallLog – Contacts – Media Store - Data Access and Storage - Shared Preferences - Storage External - Network Connection - SQLite Databases - Deploying Android Application to the World.

Text Books:

22CIE05

Distributed Systems

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

Java Programming, Operating Systems, Computer Networks

Course Objectives

- 1. To provide students with contemporary knowledge in distributed systems
- 2. To introduce the computation and communication models of distributed systems
- 3. To describe distributed mutual exclusion techniques
- 4. To provide master skills to measure the performance of distributed synchronization algorithms
- 5. To understand the Distributed File System to analyse various file systems like NFS, AFS and the experience in building large-scale distributed applications

Course Outcomes

By the end of this course, students should be able to:

- 1. Demonstrate knowledge of the basic elements and concepts related to distributed system technologies;
- 2. Illustrate the middleware technologies that support distributed applications such as RPC, RMI and Object based middleware.
- 3. Analyse the various techniques used for Process management, synchronization and mutual exclusion
- 4. Demonstrate the concepts of Consistency and Replication Management
- 5. Apply the knowledge of Distributed File System to analyse various file systems like NFS, AFS and the experience in building large-scale distributed applications.

CO-PO Articulation Matrix

Unit – I

Introduction to Distributed Systems:

Characterization of Distributed Systems: Introduction, Examples of Distributed Systems, Trends in distributed systems, Focus on resource sharing, Challenges, Case study: The World Wide Web. **System Models:** Introduction, Physical models, Architectural models, Fundamental models.

Unit – II

Processes: Threads, Virtualization, Clients, Servers, Code Migration.

Communication: Fundamentals, Remote Procedure Call (RPC), Message Oriented Communication, Stream Oriented Communication, Group Communication. Remote Invocation: Remote Method Invocation (RMI), case study: Java RMI.
Unit – III

Clock Synchronization, Logical Clocks, Mutual Exclusion, Election Algorithms. **Distributed mutual exclusion algorithms:**

Non Token based Algorithms: Lamport's Algorithm, Ricart–Agrawala's Algorithm, Singhal's dynamic information-structure Algorithm.

Token Based Algorithms: Suzuki-Kasami's Broadcast Algorithm, Raymond's Tree based Algorithm, Comparative Performance Analysis.

Unit – IV

Consistency, Replication and Fault Tolerance:

Introduction to replication and consistency, Data-Centric and Client-Centric Consistency Models, Replica Management.

Fault Tolerance: Introduction, Process resilience, Reliable client-server and group communication, Recovery.

Unit – V

Distributed File Systems: Introduction, file service architecture. **Case Study:** Network File System (NFS), Andrew File System (AFS).

Name services: Introduction, Name services and Domain Name System, Directory Services, Case Study: The Global Name Service, The X.500 Directory Service.

Textbook:

Distributed Systems Lab

Instruction Duration of SEE SEE CIE Credits 2 L Hours per Week 3 Hours 50 Marks 50 Marks

Pre-Requisites

Java Programming, Operating Systems, Computer Networks

Course Objectives

- 1. To introduce the primitive client-server programs.
- 2. To explore underlying components of distributed systems.
- 3. To understand the significance of Synchronization.
- 4. To understand various distributed systems.

Course Outcomes

By the end of this course, students should be able to:

- 1. Develop, test and debug RPC/RMI based client-server programs.
- 2. Implement the main underlying components of distributed systems (such as IPC, name resolution, file systems etc.)
- 3. Implement various techniques of synchronization.
- 4. Design and implement application programs on distributed systems.

LIST OF EXPERIMENTS

- 1. Understanding Distributed operating Systems and Network Operating Systems.
- 2. Implementation of Client/Server application using RPC/RMI.
- 3. Implementation of Election Algorithm.
- 4. Implementation of Inter-process communication.
- 5. Implementation of Group Communication.
- 6. Implementation of Clock Synchronization algorithms.
- 7. Implementation of Mutual Exclusion Algorithm.
- 8. Implementation of Load Balancing Algorithm.
- 9. Implementation of Name Resolution protocol.
- 10. Implementation of Deadlock Detection in Distributed systems.
- 11. Discussing Different types of Distributed File Systems (NFS, AFS)

MOBILE SECURITY

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

Understanding basic computer security, familiarity with operating systems (Windows/Linux), and basic programming skills including Java for Android and Swift for iOS.

Course Objectives

- 1. Understand the fundamentals of mobile security, including device architecture and common threats.
- 2. Learn about the security models of popular mobile operating systems (Android and iOS).
- 3. Analyze common threats and vulnerabilities in mobile devices and networks.
- 4. Explore mobile cloud security and its unique challenges.
- 5. Address legal, ethical, and regulatory aspects of mobile security.

Course Outcomes

By the end of this course, students should be able to:

- 1. Describe mobile device architecture and common security risks in mobile environments.
- 2. Explain the security models of Android and iOS and understand their best practices.
- 3. Identify common mobile threats, attack vectors, and vulnerabilities.
- 4. Analyze security issues in mobile-cloud interactions and suggest secure design practices.
- 5. Evaluate legal, ethical, and regulatory considerations in mobile security and apply best practices.

CO-PO Articulation Matrix

Unit – I

Introduction to Mobile Security- Mobile device architecture, Mobile platform characteristics, Physical security of mobile devices, Common security risks in mobile environments, Secure mobile application design, Safe browsing and secure operating systems, Application isolation techniques, Viruses, worms, trojans, spyware, and malware in mobile contexts, Insecure device drivers in mobile devices.

Unit – II

Mobile Operating System Security- Android security model, Android permissions and content providers, Android inter-process communication (IPC) mechanisms, Android security tools, Secure Android debugging practices, iOS security overview, iOS app sandboxing, iOS key bags and key chains, Mobile Device Management (MDM) practices, Mobile security best practices for Android and iOS.

Unit – III

Mobile Threats and Vulnerabilities- Mobile malware types and behavior, Common mobile attack vectors, Network attacks and their impact on mobile devices, Identity theft, and mobile phishing, Mobile Denial of

Service (DoS) attacks, Bluetooth security risks and countermeasures, Analysis of mobile vulnerabilities, Techniques for mitigating mobile threats, Overview of mobile malware defenses.

Unit – IV

Mobile Cloud Security- Mobile cloud computing and its security challenges, outsourcing mobile applications and data to the cloud, Risks associated with mobile-cloud interactions, Security in cloud-based mobile applications, Leveraging cloud services securely, Managing mobile cloud-based applications, Data encryption for mobile-cloud security, Case studies on mobile cloud security incidents.

Unit – V

Legal, Ethical, and Regulatory Considerations in Mobile Security- Legal issues in mobile security, Compliance with mobile security regulations, Ethical considerations in mobile security practices, Mobile security penetration testing tools and methodologies, Forensics and incident response for mobile devices, Legal implications of mobile security breaches, Courtroom skills for mobile security experts, best practices for ensuring legal compliance in mobile security.

SOFTWARE ENGINEERING

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks

Pre-Requisites

Object-oriented programming, Programming for problem-solving, database management systems.

Course Objectives

This course aims to:

- 1. Understand the Software Engineering Practice and Process Models.
- 2. Understand Design Engineering and Project Management in Software Development.
- 3. Understand the importance of testing in software development and study various testing strategies and software quality metrics

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Acquire a working knowledge of software processes and models for each phase of software development.
- 2. Understand the agile Software process models and demonstrate the skills necessary to specify the requirements.
- 3. Recall the modelling concepts and estimate the cost of software using empirical models.
- 4. Enlist the design principles and construct a product using coding principles and standards.
- 5. Develop test cases and acquire skills necessary for independently developing a complete software project and estimate software quality.

22CIC13

DESIGN AND DEVELOPMENT OF BLOCKCHAIN APPLICATIONS

Instruction
Duration of SEE
SEE
CIE
Credits

3 Hours per Week 3 Hours 60 Marks 40 Marks 3

Course Objectives

This course aims to

- 1. To aquaint with the cryptographic principles and mechanisms behind Blockchain technology.
- 2. To gain knowledge of fundamental concepts of a Blockchain network.
- 3. To develop a comprehensive understanding of consensus algorithms and their implementation in different Blockchain networks.
- 4. To explore programmability of Blockchain through smart contracts and implement simple smart contracts.
- 5. To learn and implement real-world applications of smart contracts and Blockchain.

Course Outcomes

By the end of this course, students should be able to:

- 1. To demonstrate comprehensive understanding of crypto primitives behind Blockchain technology.
- 2. To analyze different consensus mechanisms and their limitations.
- 3. Ability to demonstrate the comprehensive understanding of Ethereum Blockchain network.
- 4. To design and develop smart contracts using Solidity programming language.
- 5. To develop, deploy and interact with real-world smart contracts and Blockchain applications.

22EEM01

UNIVERSAL HUMAN VALUES-II: UNDERSTANDING HARMONY (B.E/B. Tech - Common to all Branches)

Instruction	1T Hours per week
Duration of SEE	-
SEE	-
CIE	50 Marks
Credits	1

INTRODUCTION:

This course discusses the role of human values in one's family, in society and in nature. During the Induction Program, students would get an initial exposure to human values through Universal Human Values–I. This exposure is to be augmented by this compulsory full semester foundation course.

COURSE OBJECTIVES: This course aims to

- 1. Understand the concept of universal human values
- 2. Cultivate empathy and respect for diversity
- 3. Inspire the social responsibility and global citizenship

COURSE OUTCOMES After the completion of this course, the student will be able to

- 1. Become familiar about themselves, and their surroundings (family, society, nature).
- 2. Develop empathy and respect for diversity by gaining an appreciation for different cultures, perspectives, and identities
- 3. Exhibit responsible and ethical behavior by adhering to principles of integrity, honesty, compassion, and justice.
- 4. Recognize their role as global citizens.
- 5. Exhibit a sense of social responsibility.

CO-PO Articulation Matrix

1 - Slightly, 2 - Moderately, 3 - Substantially

MODULE -1: Course Introduction - Need, Basic Guidelines, Content and Process for Value Education

- Purpose and motivation for the course, recapitulation from Universal Human Values-I
- Self-Exploration-what is it? Its content and process; 'Natural Acceptance' and
- Experiential Validation- as the process for self-exploration.
- Natural acceptance of human values.
- Definitiveness of Ethical Human Conduct.
- Continuous Happiness and Prosperity- A look at basic Human Aspirations.
- Right understanding, Relationship and Physical Facility- the basic requirements for fulfilment of aspirations of every human being with their correct priority.
- Understanding Happiness and Prosperity correctly- A critical appraisal of the current Scenario.
- Method to fulfil the above human aspirations: understanding and living in harmony at various levels.

Include practice sessions to discuss natural acceptance in human being as the innate acceptance for living with responsibility (living in relationship, harmony and co-existence) rather than as arbitrariness in choice based on liking-disliking.

MODULE- 2: Understanding Harmony in the Human Being - Harmony in Myself

- Understanding human being as a co-existence of the sentient 'I' and the material 'Body'
- Understanding the needs of Self ('I') and 'Body' happiness and physical facility
- Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer)
- Understanding the characteristics and activities of 'I' and harmony in 'I'
- Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail.
- Programs to ensure Sanyam and Health.

Include practice sessions to discuss the role others have played in making material goods available to me. Identifying from one's own life. Differentiate between prosperity and accumulation. Discuss program for ensuring health vs dealing with disease.

MODULE-3: Understanding Harmony in the Family and Society- Harmony in Human-Human Relationship

- Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness; Trust and Respect as the foundational values of relationship.
- Understanding the meaning of Trust; Difference between intention and competence.
- Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship.
- Understanding the harmony in society (society being an extension of family): Resolution, Prosperity, fearlessness (trust) and co -existence as comprehensive Human Goals.
- Strategy for transition from the present state to Universal Human Order:

a. At the level of individual: as socially and ecologically responsible engineers, technologists, and managers.

b. At the level of society: as mutually enriching institutions and organizations.

Include practice sessions to reflect on relationships in family, hostel and institute as extended family, real life examples, teacher-student relationship, goal of education etc. Gratitude as a universal value in relationships. Discuss scenarios. Elicit examples from students' lives.

MODULE -4: Understanding Harmony in Nature and Existence - Whole existence as Coexistence.

- Understanding the harmony in Nature.
- Interconnectedness and mutual fulfilment among the four orders of nature recyclability and self-regulation in nature.
- Understanding Existence as Co-existence of mutually interacting units in all pervasive space.
- Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order.
- Holistic perception of harmony at all levels of existence.
- Competence in professional ethics: a. Ability to utilize the professional competence for augmenting universal human order b. Ability Identify the scope and characteristics of people friendly and eco-friendly production systems, c. Ability Identify and develop appropriate technologies and management patterns for above production systems.
- Case studies of typical holistic technologies, management models and production systems.

Include practice sessions to discuss human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc. Include practice Exercises and Case Studies will be taken up in Practice (tutorial) Sessions e.g. To discuss the conduct as an engineer or scientist etc.

MODE OF CONDUCT (L-T-P-C 0-1-0-0)

- While analyzing and discussing the topic, the faculty mentor's role is in pointing to essential elements to help in sorting them out from the surface elements. In other words, help the students explore the important or critical elements.
- In the discussions, particularly during practice sessions (tutorials), the mentor encourages the student to connect with one's own self and do self-observation, self-reflection, and self- exploration.
- Scenarios may be used to initiate discussion. The student is encouraged to take up "ordinary" situations rather than" extra-ordinary" situations. Such observations and their analyses are shared and discussed with other students and faculty mentors, in a group sitting.

- **Tutorials (experiments or practical) are important for this course**. The difference is that the laboratory is everyday life, and practical are how you behave and work in real life. Depending on the nature of topics, worksheets, home assignments and/or activities are included.
- The practice sessions would also provide support to a student in performing actions commensurate to his/her beliefs. It is intended that this would lead to the development of commitment, namely behaving and working based on basic human values.
- It is advised to share the experience of the Faculty to the class in a capsule form.
- Involve more in evaluating the student by different activities with proper RUBRCCS

ASSESSMENT:

This is a compulsory credit course. The assessment is to provide a fair state of development of the student, so participation in classroom discussions, self- assessment, peer assessment etc. will be used in evaluation.

EXAMPLE:

10 M
10 M
10 M
10 M
10 M

The overall pass percentage is 50%. In case the student fails, he/she must repeat the course.

MOBILE SECURITY LAB

Instruction Duration of SEE SEE CIE Credits 2 P Hours per Week 3 Hours 50 Marks 50 Marks 1

Pre-Requisites

Basic grasp of computer security concepts, familiarity with operating systems (Windows/Linux/macOS), basic programming skills in Java for Android and Swift for iOS, and understanding of mobile app development tools like Android Studio and Xcode.

Course Objectives

- 1. Understand mobile device architecture and key security features.
- 2. Analyze permissions and vulnerabilities in mobile applications.
- 3. Investigate mobile malware and common threats.
- 4. Examine mobile operating system security mechanisms.
- 5. Conduct mobile penetration testing and forensic analysis.

Course Outcomes

By the end of this course, students should be able to:

- 1. Understand mobile device architecture, including hardware components and OS features.
- 2. Analyze and identify potential vulnerabilities in mobile applications, including permissions.
- 3. Explore mobile malware and understand their behavior and mitigation.
- 4. Examine the security mechanisms of mobile operating systems, focusing on sandboxing and encryption.
- 5. Conduct penetration testing and basic forensic analysis on mobile devices.

CO-PO Articulation Matrix

List of Experiments

- 1. **Exploring Mobile Device Architecture**: Disassemble a mobile device to examine its internal components and investigate its system architecture, OS version, and security features.
- 2. **Analyzing Permissions in Mobile Applications**: Select a set of applications from the Google Play Store or Apple App Store, then use tools to extract and analyze their permissions.
- 3. **Testing Mobile Security Best Practices**: Develop a simple Android/iOS app following secure coding guidelines, then conduct a vulnerability assessment using security tools.
- 4. **Investigating Mobile Malware**: Use a sandboxed environment to run known malware samples, then analyze their behavior and potential impact on mobile devices.
- 5. Exploring Mobile Operating System Security: Compare Android and iOS security models,

focusing on sandboxing, inter-process communication, and encryption, and experiment with secure debugging practices.

- 6. **Simulating Mobile Network Attacks**: Simulate a basic network attack, like a Man-in-the-Middle or Bluetooth attack, in a controlled environment, then test countermeasures to mitigate these attacks.
- 7. **Exploring Mobile Cloud Security**: Develop a simple cloud-based mobile application, then conduct a security risk assessment focusing on data encryption and secure communication.
- 8. **Conducting Mobile Security Penetration Testing**: Perform penetration testing on a sample mobile application using tools like Metasploit or Burp Suite, then document the findings and suggest countermeasures.
- 9. Forensic Analysis of Mobile Devices: Simulate a forensic investigation on a mobile device to extract data and analyze potential breaches, using forensic tools to recover deleted data and analyze user activities.
- 10. Understanding Legal and Ethical Considerations in Mobile Security: Analyze a case study involving a mobile security breach, discuss the legal implications and ethical considerations, then draft a report outlining best practices for compliance.

Textbook:

- 1. "Android Security Internals" by Nikolay Elenkov, 1st edition, 2014, No Starch Press
- 2. "iOS Hacker's Handbook" by Charlie Miller, Dionysius Blazakis, Dino Dai Zovi, Stefan Esser, Vincenzo Iozzo, Ralf-Philipp Weinmann, 1st edition, 2012, John Wiley & Sons

Reference Books

22CIC14

DESIGN AND DEVELOPMENT OF BLOCKCHAIN APPLICATIONS LAB

Instruction Duration of SEE SEE CIE Credits

Course Objectives

- 1. To familiarize the basic concepts of blockchain.
- 2. To provide the significance of the Ethereum blockchain.
- 3. To introduce solidity programming for developing blockchain applications.
- 4. To explore Remix Tool for developing smart contracts.
- 5. To explore the features of blockchain for various applications.

Course Outcomes

Upon successful completion of this course, students will be able to:

- 1. Explore the working of blockchain fundamentals such as cryptography and distributed computing.
- 2. Implement smart contract on the Ethereum blockchain.
- 3. Build smart contracts using Solidity programming language.
- 4. Develop smart contracts using the Remix tool.
- 5. Acquire thorough knowledge of blockchain applications.

PO/PSO CO	РО 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3

CO-PO Articulation Matrix

LIST OF EXPERIMENTS:

- 1. Develop a Java/Python/Go program to create Elliptic curve public and private keys and demonstrate working of hash functions like SHA256 and ECC digital signatures.
- 2. Setup a Bitcoin wallet like Electrum and demonstrate sending and receiving Bitcoins on a testnet. Use Blockchain explorer to observe the transaction details.
- 3. Setup metamask wallet in a web browser and create wallet and user accounts. Demonstrate sending and receiving ethers on a testnet (Sepolia). Use Block explorers like etherscan to observe the transaction details.
- 4. Launch Remix web browser and write a smart contract using the solidity language for the "Hello World program".
- 5. Write Solidity program
 - (a) For incrementing/decrementing a counter variable in a smart contract.
 - (b) To send ether from a Meta-mask account to another Meta-mask account through a smart contract.
 - (c) To simulate a lottery game

2 Periods Per Week 3 Hours 50 Marks 50 Marks

- (d) To demonstrate ERC20 tokens and to create a bank which deals with ERC20 tokens. The bank should provide lending, and borrowing of ERC20 tokens.
- (e) To demonstrate ERC721 and ERC1155 tokens, access controls in a smart contract.
- 6. Write a Solidity program to demonstrate Decentralized Autonomous Organizations (DAO) and liquidity pools.
- 7. Write a Solidity program to demonstrate Multi-signature wallet, Time-locked wallet and Escrow contract.
- 8. Write a Solidity program to track provenance and movement of goods through the supply chain, ensuring transparency and authenticity (Supply-Chain)
- 9. Write a Solidity program that automatically pays out claims based on predefined conditions eliminating the need for intermediate (Insurance)
- 10. Write a Solidity program to conduct secure and transparent voting processes without relying on central authority (Voting Systems)

EMPLOYABILITY SKILLS

Instruction
Duration of SEE
SEE
CIE
Credits

2 L Hours per Week 2 Hours 50 Marks 50 Marks

Pre-Requisites

Basic Knowledge of Soft skills in the professional setting

Course Objectives: To help the students

- 1. Learn the art of communication, participate in group discussions and case studies with confidence and to make effective presentations.
- 2. With- resume packaging, preparing them to face interviews.
- 3. Build an impressive personality through effective time management, leadership qualities, self-confidence and assertiveness.
- 4. Understand professional etiquette and to make them learn academic ethics and value system.
- 5. To be competent in verbal aptitude.

Course Outcomes

By the end of the course, the students will be able to

- 1. Become effective communicators, participate in group discussions with confidence and be able to make presentations in a professional context.
- 2. Write resumes, prepare and face interviews confidently.
- 3. Be assertive and set short term and long term goals, learn to manage time effectively and deal with stress.
- 4. Make the transition smoothly from campus to work, use media with etiquette and understand the academic ethics.
- 5. Enrich their vocabulary, frame accurate sentences and comprehend passages confidently.

CO-PO Articulation Matrix

Unit – I

Verbal Aptitude: Error Detection, Articles, Prepositions, Tenses, Concord and Transformation of Sentences-Jumbled Words/Sentences- Vocabulary, Synonyms, Antonyms, One Word Substitutes, Idioms and Phrases, Word/Sentence/Text Completion- Reading Comprehension.

Unit – II

Group Discussion & Presentation Skills: Dynamics of Group Discussion-Case Studies- Intervention, Summarizing, Modulation of Voice, Body Language, Relevance, Fluency and Accuracy, Coherence. Elements of Effective Presentation – Structure of a Presentation – Presentation tools – Body language - Preparing an Effective PPT.

Unit – III

Behavioural Skills: Personal strength analysis-Effective Time Management- Goal Setting- Stress management-

Corporate Culture – Grooming and etiquette-Statement of Purpose (SOP).

Unit – IV

Mini Project: Research-Hypothesis-Developing a Questionnaire-Data Collection-Analysis-General and Technical Report - Writing an Abstract – Technical Report Writing-Plagiarism-Project Seminar.

Unit – V

Interview Skills: Cover Letter and Résumé writing – Structure and Presentation, Planning, Defining the Career Objective, Projecting ones Strengths and Skill-sets – Interviews: Concept and Process, Pre-Interview Planning, Opening Strategies, Answering Strategies, Mock Interviews.

Textbook:

- 1. Leena Sen, "Communication Skills", Prentice-Hall of India, 2005.
- 2. Gulati and Sarvesh, "Corporate Soft Skills", New Delhi: Rupa and Co., 2006.
- 3. Edgar Thorpe and Showick Thorpe, "Objective English", 2nd edition, Pearson Education, 2007.
- 4. Ramesh, Gopalswamy, and Mahadevan Ramesh, "The ACE of Soft Skills", New Delhi: Pearson, 2010.

Reference Books

- 1. Van Emden, Joan, and Lucinda Becker, "Presentation Skills for Students", New York: Palgrave Macmillan, 2004.
- 2. R.S. Aggarwal, "A Modern Approach to Verbal & Non-Verbal Reasoning", 2018.
- 3. Covey and Stephen R, "The Habits of Highly Effective People", New York: Free Press, 1989.
- 4. Shalini Verma, "Body Language Your Success Mantra", S Chand, 2006.

22ITE18

Enterprise Application Development

Instruction Duration of SEE SEE CIE Credits 3L Hours per Week 3 Hours 60 Marks 40 Marks 3

Course Objectives

- 1. To provide knowledge about web pages design and development.
- 2. To understand how the HTML, CSS and JavaScript components of Bootstrap work.
- 3. To explore the basic architecture of a React application and develop applications in agile mode.
- 4. To gain the basics of frond-end and back-end application development using Nodejs.
- 5. To understand the basics of MongoDB and its Data Model.

Course Outcomes

Upon successful completion of this course, students will be able to:

- 1. Create web pages with good aesthetic sense of design using HTML and CSS.
- 2. Create real-world React web applications and related tools.
- 3. Become an agile practitioner with the ability to quickly complete projects.
- 4. Build an end-to-end application from scratch using NODE JS.
- 5. Understand and build logical relationships between documents using MongoDB.

	PO1	PO2	PO3	PO4	PO5	PO6	P07	PO8	PO9	PO 10	PO 11	PO 12	PSO1	PSO2	PSO3

CO2	2	1	2	1	2	-	-	-	-	-	1	-	2	2	3
CO3	2	1	2	2	1	-	-	-	-	-	-	-	3	3	3
CO4	2	1	1	1	1	-	-	-	-	-	-	1	1	3	3
CO5	2	1	1	1	1	-	-	-	-	-	-	1	1	3	3

CO-PO Articulation Matrix

Unit –I

Introduction to full stack: MVC pattern, Web Fundamentals. **HTML 5.0:** Basic tags, HTML DOM, Images, Tables, Lists, Forms, Layout, Graphics, span and div tags.

Introduction to Cascading Style Sheets: Types of CSS, CSS Selectors, CSS BOX Model,Text and Font, Color, CSS Positioning and CSS floating, CSS Grid layout Module, CSS Media Queries.

Unit –II

Java Script: Data Types & Type Conversion, JSON, Events, String and Date Functions, Local Storage, Object Oriented Programming (OOP) in JS, JavaScript Regular Expressions.

Bootstrap: Introduction of Bootstrap, Container and Container-fluid, Bootstrap Carousel.

Bootstrap Component: Button, Grid, Table, Form, Alert, Image, Tabs/Pill, Navbar, Modals.

Unit –III

React JS: Introduction to React, React with JSX, Actual DOM vs React VDOM, Components, Lifecycle, State, Props, Fragments, Events, Router, Forms, Pagination, Tables, Portals, Hook, Signals. React 18 New features. **Redux and MUI:** Introduction to Redux, State, Actions, Reducers, Color

Reducer, Sort Reducer, Store, Action Creators, Middleware. React Material UI Introduction and Installation, MUI Input Components.

Integration of Google MAP API and GPS Location Tracking: Incorporating Google MAP API and GPS Location Tracking for location-based services.

Unit –IV

Node JS: Modules, Node Package Manager(npm),Creating Web Server, Sending Requests and Handling HTTP requests, Handling User authentication with NodeJS, File System, Writing a file asynchronously and Other I/O Operations.

Events: Event Emitter class, Inheriting Events and Returning event emitter.

Express JS: Introduction to the Express framework-Server-side rendering with Templating Engines, Routing, Middleware, Custom Middleware, static files.

Unit –V

Mongo DB: Introduction, Importance of NoSQL databases, JSON Vs BSON, Data types and examples. CRUD Operations, Data Modelling & Schema Design, Indexing and Aggregation, MongoDB Replication and Sharding.

Text Books:

- 1. Vasan Subramanian, "Pro MERN Stack: Full Stack Web App Development with Mongo, Express, React, and Node", second Edition, Apress Publications, 2019.
- 2. David Hows, Peter Membrey, EelcoPlugge "MongoDB Basics", Apress, 2014.

Suggested Reading:

1. Ethan Brown, "Web Development with Node and Express", Oreilly Publishers, First Edition, 2014.

Web Resources:

- 1. https://web.stanford.edu/class/cs142/index.html
- 2. https://nodejs.org/en/docs/
- 3. https://www.mongodb.com/
- 4. https://reactjs.org/
- 5. https://getbootstrap.com/docs/5.0/utilities/api/
- 6. https://edu.anarcho-copy.org/Programming%20Languages/Node/

22ITE19

Enterprise Application Development Lab

Instruction Duration of SEE SEE CIE Credits 2P Hours per Week 3 Hours 50 Marks 50 Marks 1

Course Objectives

- 1. To understand and practice HTML5 and CSS.
- 2. To introduce the fundamental concepts of JavaScript and Bootstrap.
- 3. To understand the concepts of Client-side JS Framework.
- 4. To work with the concepts of Server-side JS Framework.
- 5. To be familiar with real time database.

Course Outcomes

Upon successful completion of this course, students will be able to:

- 1. Apply HTML and CSS effectively to create dynamic websites.
- 2. Describe and utilize JavaScript concepts in real-world applications.
- 3. Develop single page applications in React Framework.
- 4. Use Node.js for server-side application development.
- 5. Design the Realtime database applications based on the requirements.

CO-PO Articulation Matrix

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	2	2	1	2	-	-	1	3	1	2	2	3	-	3
CO2	2	3	2	1	2	-	-	1	3	1	2	2	3	-	3
CO3	2	3	2	1	2	-	-	1	3	1	2	2	3	-	3
CO4	2	2	2	1	2	-	-	1	3	1	2	2	3	-	3
CO5	2	2	2	1	2	-	-	1	3	1	2	2	3	-	3

List of Experiments:

- 1. Design a Login Page using HTML, CSS (Media Query) and JavaScript.
- 2. Design a chessboard pattern using HTML and CSS.
- 3. Design a calculator application using JavaScript.
- 4. Create responsive web page of your class time table by using bootstrap grid system.
- 5. Create a timer component to start, pause and reset using ReactJS.
- 6. Create a React component that checks the strength of a password and displays the result to the user. The component will take user input and use a set of rules to determine the strength of the password.
- 7. Design the authorized end points using JWT (JSON Web Token)
- 8. Develop a backend application with REST API to perform CRUD operations on student data.(Use Postman Tool)
- 9. Design replica set of student database and insert records in primary node and display the records in secondary nodes.
- 10. Create Real-Time Chat Features in a Web Application Using React, Node.js, Socket.io, and MongoDB.

Text Books:

- 1. Vasan Subramanian, "Pro MERN Stack: Full Stack Web App Development with Mongo, Express, React, and Node", second Edition, A press Publications, 2019.
- 2. David Hows, Peter Membrey, EelcoPlugge "MongoDB Basics", Apress, 2014.

Suggested Reading:

1. Ethan Brown, "Web Development with Node and Express", Oreilly Publishers, First Edition, 2014.

22CIE07

ETHICAL HACKING

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

Basic understanding of computer networks and operating systems, familiarity with programming languages like Python or C/C++, and knowledge of cybersecurity fundamentals.

Course Objectives

- 1. Understand the principles and methodologies of ethical hacking.
- 2. Learn various techniques for reconnaissance, scanning, and enumeration.
- 3. Gain proficiency in vulnerability assessment and penetration testing.
- 4. Develop skills to identify and exploit common security vulnerabilities.
- 5. Acquire knowledge of ethical and legal considerations in penetration testing.

Course Outcomes

By the end of this course, students should be able to:

- 1. Understand the ethical and legal implications of hacking activities.
- 2. Demonstrate proficiency in conducting reconnaissance and scanning.
- 3. Identify and exploit vulnerabilities in networks and systems.
- 4. Perform penetration tests to assess the security posture of an organization.
- 5. Adhere to ethical standards and guidelines while conducting penetration testing.

PO/CO	PO 1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO5	3	2	2	3	3	-	3	2	1	1	2	3	2	3	3

CO-PO Articulation Matrix

Unit – I

Overview of Ethical Hacking: Definition, scope, and Importance of ethical hacking, Different types of hackers, Evolution of ethical hacking, Legal and regulatory frameworks related to hacking, Computer Fraud and Abuse Act, Code of ethics for ethical hackers, Ethical considerations in penetration testing, Hacking methodologies, Understanding the stages of ethical hacking, Tools and techniques.

Unit – II

The Digital Investigation Process- Role of Computers in Crime, Evidence in the Courtroom, Duty of Experts, Information Gathering Techniques -Search engine footprinting, Social media footprinting, Various tools used for footprinting, Understanding social engineering concepts, Types of social engineering attacks, phishing, pretexting, baiting, tailgating, Countermeasures and prevention techniques.

Unit – III

Introduction to port scanning-Types of port scans: TCP, UDP, SYN, ACK, FIN, NULL, XMAS -Using tools for port scanning, Enumerating services and protocols, Banner grabbing techniques, NetBIOS and SNMP enumeration, Using tools like Nessus, OpenVAS, and Nexpose-Interpreting scan results and prioritizing

vulnerabilities.

Unit – IV

Types of password attacks, Password cracking tools and utilities, Password policy enforcement and best practices, Understanding privilege escalation, Local privilege escalation techniques, exploiting misconfigurations and vulnerabilities for privilege escalation, Introduction to rootkits and malware, Detection and removal of rootkits and malware, Rootkit and malware prevention techniques.

Unit – V

Packet sniffing techniques, ARP spoofing and DNS spoofing, Man-in-the-middle attacks, Common web application vulnerabilities: SQL injection, XSS, CSRF, Tools for identifying web vulnerabilities, Exploitation techniques, and payloads. Understanding SQL injection attacks, SQL injection vulnerabilities-Types of XSS attacks: reflected, stored, DOM-based-XSS prevention and mitigation techniques.

Textbook:

- 1. "The Basics of Hacking and Penetration Testing Ethical Hacking and Penetration Testing Made Easy" by Patrick Engebretson, Second Edition, Syngress publications, 2013.
- 2. "CEH Certified Ethical Hacker All-in-One Exam Guide" by Matt Walker, Fourth Edition, McGraw Hill, 2019.
- 3. Rafay Baloch "Ethical Hacking and Penetration Testing Guide", CRC Press, 2015.

Reference Books

- 1. "Penetration Testing: A Hands-On Introduction to Hacking" by Georgia Weidman, No Starch Press, US, 2014.
- 2. "Hacking: The Art of Exploitation" by Jon Erickson, Second Edition, No Starch Press, US, 2008.

- 1. OWASP (Open Web Application Security Project): <u>https://owasp.org/</u>
- 2. SANS Institute: https://www.sans.org/
- 3. Offensive Security: https://www.offensive-security.com/

22CIE08

ETHICAL HACKING LAB

Instruction Duration of SEE SEE CIE Credits 2 P Hours per Week 3 Hours 50 Marks 50 Marks 1

Pre-Requisites

Basic understanding of computer networks and operating systems, familiarity with programming languages like Python or C/C++, and knowledge of cybersecurity fundamentals.

Course Objectives

- 1. Understand the principles and ethics of ethical hacking.
- 2. Use common tools and techniques for footprinting, port scanning, and vulnerability assessment.
- 3. Demonstrate knowledge of social engineering attacks and identify strategies to mitigate them.
- 4. Explore advanced hacking techniques, including privilege escalation, rootkits, and malware analysis.
- 5. Conduct comprehensive penetration tests and develop reports that outline vulnerabilities and remediation strategies.

Course Outcomes

By the end of this course, students should be able to:

- 1. Conduct information gathering and reconnaissance on a target system or network.
- 2. Perform various port scanning and service enumeration techniques.
- 3. Identify and mitigate common vulnerabilities in networks and systems.
- 4. Apply different password cracking methods and recommend best practices for password security.
- 5. Conduct comprehensive penetration tests and document the findings in a detailed report.

PO/CO	PO 1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO5	3	3	3	2	3	-	1	-	1	3	3	3	3	2	3

CO-PO Articulation Matrix

Lab Experiments

- 1. Learn information-gathering techniques for target domains and networks using tools like Nmap, WHOIS, Shodan, and Maltego.
- 2. Understand social engineering tactics and their security implications, simulating attacks with tools like phishing frameworks (e.g., GoPhish) or phone call scripts.
- 3. Explore port scanning and service enumeration methods with tools like Nmap and hping.
- 4. Identify vulnerabilities in networks and systems using vulnerability scanning tools like Nessus, OpenVAS, or Nexpose.
- 5. Familiarize yourself with password-cracking techniques using tools like John the Ripper or Hashcat.
- 6. Understand privilege escalation and its impact on system security through hands-on exercises with tools like Metasploit or PowerShell scripts.
- 7. Analyze rootkits and malware for detection and removal using tools like GMER, Wireshark, or

antivirus software.

- 8. Explore network sniffing and spoofing techniques with packet sniffers like Wireshark and tools for ARP spoofing like Ettercap or Bettercap.
- 9. Identify and exploit common web application vulnerabilities using tools like OWASP ZAP or Burp Suite.
- 10. Conduct a comprehensive penetration test on a target system or network using a combination of tools for reconnaissance, scanning, exploitation, and post-exploitation analysis, such as Nmap, Metasploit, and Wireshark.

Textbook:

22CAE16

Deep Learning

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

Artificial intelligence, Machine Learning

Course Objectives

The objectives of this course are

- 1. 1Provide students with a strong foundation in the history, concepts, and mathematical principles of deep learning.
- 2. Develop students' skills in gradient descent methods and regularization techniques for effective model training.
- 3. Equip students to design and implement convolutional and recurrent neural network architectures.
- 4. Enhance students' understanding and application of autoencoders and regularization methods for robust models.
- 5. Expose students to the latest deep learning models and trends, preparing them for future advancements

Course Outcomes

On Successful completion of the course, students will be able to,

- 1. Demonstrate comprehensive understanding of foundational deep learning concepts and neural network architectures.
- 2. Design and apply sophisticated neural network models to solve complex real-world problems.
- 3. Utilize diverse training algorithms and optimization methods to enhance deep learning model performance.
- 4. Implement innovative techniques for model development and regularization to improve generalization and robustness.
- 5. Investigate and apply recent advancements in deep learning, including transformers and GANs, to stay current in the field..

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO5	3	3	3	3	3	1	1	1	2	2	2	3

CO-PO Articulation Matrix

Unit – I

Neural Networks: History of Deep Learning, Deep Learning Success Stories, McCulloch Pitts Neuron, Thresholding Logic, Perceptrons, Perceptron Learning Algorithm Multilayer Perceptrons (MLPs), Representation Power of MLPs, Sigmoid Neurons, Gradient Descent

Unit – II

Backpropagation Gradient Descent (GD), Momentum Based GD, Nesterov Accelerated GD, Stochastic GD,

AdaGrad, RMSProp, Adam, Eigenvalues and eigenvectors, Eigenvalue Decomposition. **Regularization:** Bias Variance Tradeoff, L2 regularization, early stopping, Dataset augmentation, Parameter sharing and tying, Injecting noise at input, Ensemble methods, Dropout.

Unit – III

Convolutional Neural Network: The Convolution Operation, Motivation, Pooling, Convolution and Pooling as an Infinitely Strong Prior, Variants of the Basic Convolution Function, Structured Outputs, Data Types. **Pre-trained models:** LeNet, AlexNet, ZF-Net, VGGNet, GoogLeNet, ResNet. Visualizing Convolutional Neural Networks, Guided Backpropagation, Deep Dream, Deep Art, Fooling Convolutional Neural Networks.

Unit – IV

Auto encoders: relation to PCA, Regularization in auto encoders, Denoising auto encoders, sparse auto encoders, Contractive auto encoders **Recurrent Neural Networks**: Vanishing and Exploding Gradients, GRU, LSTMs. Encoder Decoder Models, Attention Mechanism.

Unit – V

Transformers: ViT and BERT models. **Generative Adversarial Networks (GANs):** Introduction, Discriminator, Generator, Activation, Common Activation functions for GANs. **Recent Trends:** Zero-shot, One-shot, Few-shot Learning; Self-supervised Learning.

22CAE23

DEEP LEARNING LAB

Instruction Duration of SEE SEE CIE Credits

Pre-Requisites

Artificial Intelligence, Machine Learning.

Course Objectives

The objectives of this course are

- 1. Implement fundamental image processing techniques like linear filtering and edge detection.
- 2. Learn to extract features such as blobs, corners, and scale space representations from images.
- 3. Understand and implement feature descriptors like SIFT, SURF, HoG, and LBP for image analysis.
- 4. Develop skills in image matching using bag-of-words approach and estimating optical flow in video sequences.
- 5. Gain basic understanding of Convolutional Neural Networks (CNNs) and apply them for image classification tasks.

Course Outcomes

On Successful completion of the course, students will be able to:

- 1. Ability to apply various image processing techniques to manipulate and enhance images.
- 2. Skill in extracting and understanding different types of features from images.
- 3. Ability to implement and use feature descriptors for image analysis tasks.
- 4. Proficiency in image matching and estimating optical flow, important for motion analysis and object tracking.
- 5. Understanding of basic CNN architecture and ability to apply it for image classification on real-world datasets

CO5	3	3	3	3	3	1	1	1	2	2	2	3

CO-PO Articulation Matrix

LIST OF EXPERIMENTS:

- 1. Implement a program to apply a given kernel to an image for linear filtering.
- 2. Write a program to detect edges in an image using techniques like Sobel, Prewitt, or Canny edge detection.
- 3. Implement a program to detect blobs in an image using techniques like Laplacian of Gaussian.
- 4. Write a program to detect corners in an image using techniques like Harris corner detection.
- 5. Implement a program to create a scale space representation of an image using Gaussian blurring at different scales.
- 6. Write a program to extract SIFT (Scale-Invariant Feature Transform) features from an image.
- 7. Implement a program to extract SURF (Speeded-Up Robust Features) features from an image.
- 8. Write a program to compute the HoG descriptor for an image.
- 9. Implement a program to compute the LBP (Local Binary Patterns) for an image.
- 10. Write a program to perform image matching using a bag-of-words approach.
- 11. Implement a program to estimate optical flow in a video sequence using techniques like Lucas-Kanade method.

12. Implement a basic CNN model using a deep learning framework like TensorFlow or PyTorch for image

2 L Hours per Week 3 Hours 50 Marks 50 Marks 1 classification on a dataset like CIFAR-10.

Sensor Technology and Applications

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

- 1. Internet of Things
- 2. Operating systems and Computer Networks.
- 3. C, C++, Python

Course Objectives

- 1. To introduce various types of sensors and the design of basic circuit building blocks.
- 2. Classification of sensors based on their working principles, sensing mechanisms, and applications
- 3. Explore the design considerations and fabrication techniques involved in developing sensors for specific applications
- 4. Understand the integration of sensors with electronic circuits and systems to create sensor networks, smart systems, and Internet of Things (IoT) applications
- 5. Gain practical experience through laboratory sessions, projects, and case studies involving sensor design, testing, and implementation

Course Outcomes

By the end of this course, students should be able to:

- 1. Define the various sensors and the fundamentals of sensor technology.
- 2. Describe knowledge of sensor characterization, classification, and principle
- 3. Apply the fundamental ideas behind smart sensors
- 4. Analysis and interpretation of sensor data, Knowledge of sensor types and applications:
- 5. Evaluate sensor performance and limitation

Unit – I

Sensors Fundamentals and Characteristics: Sensor, actuator and transducer, Signals and

Systems; Sensor Classification: passive and active Sensor, absolute and relative Sensor; Units of Measurements;

Sensors Characteristics: Basic Sensor Technology, Sensors, Sensor Systems, modern sensor devices, Limit Switches, Sensors and the measurement process

Unit – II

Sensor Classifications: Classifying sensor devices, Other Sensor Classifications, Sensor Characteristics,

Static and dynamic characteristics.

Reluctance change type, LVDT, Capacitive Sensors, Thermal Sensors, Magnetic Sensors, Proximity Sensor, Piezoelectric Effect

Unit – III

Multimedia Sensor Networks: Basic Concepts, Conceptual Architecture, Sensing Layer, Transmission Layer, and Processing Layer.

Unit – IV

Smart Sensor Technologies: Biosensor, Applications of Biosensor, Chemical Sensors, Applications, Electromagnetism in Sensing, Sensor Application, Force, Load and Weight Sensors, Agriculture, Applications on Agriculture.

Unit – V

Smart Sensors: Introduction, Primary Sensors, Excitation, Sensors –Applications: Introduction, On-board Automobile Sensors (Automotive Sensors), Home Appliance Sensors, Aerospace Sensors, Sensors for Manufacturing, Sensors for Environmental Monitoring

Textbook:

- 1. Sensors and Actuators, D. Patranabis, 2nd Ed., PHI, 2013.

Cloud Computing

Instruction Duration of SEE SEE CIE Credits 3L Hours per Week 3 Hours 60 Marks 40 Marks 3

Course Objectives

This course aims to:

- 1. Gain a comprehensive understanding of fundamental concepts in cloud computing, including its goals, benefits, risks, challenges, service models, and deployment models.
- 2. Explore cloud-enabling technologies such as cloud data center technology, virtualization, multitenant technology, and containerization, along with their roles and implications in cloud computing environments.
- 3. Analyze specialized cloud mechanisms and management mechanisms to understand their significance in optimizing cloud performance and resource utilization.
- 4. Examine various access-oriented and data-oriented security mechanisms implemented in cloud computing environments
- 5. Evaluate different cloud computing architectures to design scalable, resilient, and efficient cloud solutions aligned with organizational requirements and objectives.

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Understand the fundamental cloud computing concepts, including service models, deployment models.
- 2. Analyze cloud enabled technologies and evaluate various cloud infrastructure components, storage technologies, and networking principles.
- 3. Apply the advanced cloud computing mechanisms and cloud management mechanisms
- 4. Analyze the security challenges, identify potential risks, and evaluate strategies for securing cloud deployments.
- 5. Critique different cloud computing architectures, evaluating their scalability, resilience, and suitability for diverse application scenarios leverage emerging trends such as edge computing and fog computing.

CO-PO Articulation Matrix

Unit –I

Fundamental Concepts of Cloud Computing: Goals and Benefits, Risks and Challenges, Cloud Computing Service and Deployment Models:Public Cloud, Private Cloud, Hybrid Cloud, Community Cloud, Multi-Cloud.

Unit –II

Cloud-Enabling Technology:Cloud Data Center Technology, Modern Virtualization, Multitenant Technology, Service Technology and Service APIs, Fundamental of Containerization,Containers,

Container Images, Multi-Container Types. **Cloud Infrastructure Mechanisms:**Logical Network Perimeter, Virtual Server, Hypervisor, Cloud Storage Device, Cloud Usage Monitor, Resource Replication, Ready-Made Environment.

Unit –III

Specialized Cloud Mechanisms: Automated Scaling Listener, Load Balancer, SLA Monitor, Pay-Per-Use Monitor, Audit Monitor, Failover System, Resource Cluster, Multi-Device Broker, State Management Database

Cloud Management Mechanisms: Remote Administration System, Resource Management System, SLA Management System, Billing Management System.

Unit –IV

Cloud Computing Architectures: Workload Distribution Architecture, Elastic Resource Capacity Architecture, Multi Cloud Architecture, Hypervisor Clustering Architecture, Cloud Balancing Architecture **Specialized Cloud Architectures:** Edge Computing Architecture, Fog Computing Architecture, Metacloud Architecture, Federated Cloud Application Architecture. **Unit –V**

Cloud Computing Security: Threat Agents, Common Threats, Cloud Security and Cybersecurity Access-Oriented Mechanisms: Cloud-Based Security Groups, Hardened Virtual Server Image, Identity and Access Management (IAM) System, Cloud Security and Cybersecurity Data-Oriented Mechanisms: Data Loss Prevention (DLP) System, Trusted Platform Module (TPM). Cloud Delivery Model Considerations: Case Study on Cloud Provider and Consumer Perspective.

22ITE08

Cloud Computing Lab

Instruction Duration of SEE SEE CIE Credits 2P Hours per Week 3 Hours 50 Marks 50 Marks 1

Prerequisite: Knowledge on Data Bases and computing mechanisms.

Course Objectives:

This course aims to familiarize with:

- 1. Key concepts of virtualization.
- 2. Various deployment models such as private, public, hybrid and community.
- 3. Different service models, such as IaaS and PaaS.
- 4. Security and Privacy issues in the cloud.

Course Outcomes:

Upon completion of this course, students will be able to:

- 1. Adapt different types of virtualization and increase resource utilization.
- 2. Build a private cloud using open-source technologies.
- 3. Analyze security issues on the cloud.
- 4. Develop real-world web applications and deploy them on the commercial cloud.
- 5. Demonstrate various service models such as IaaS, PaaS, and SaaS

List of Experiments

- 1. Study of NIST model of cloud computing: Understand deployment models, service models, and advantages of cloud computing.
- 2. Understand different types of virtualizations, Host and bare metal hypervisors and implement horizontal scalability using technology like XEN, VMware's ESXi
- 3. Implement Infrastructure as a Service using your resources using technology like OpenStack, Eucalyptus.
- 4. Simulate identity management in your private Cloud using OpenStack technology.
- 5. Explore Storage as a Service for remote file access using web interface.
- 6. Cloud Security Objective: Understand Cloud Security of web server and data directory using ownCloud
- 7. Implement Platform as a Service by deploying web applications on commercial cloud using technology like Google App Engine, and Windows Azure .

- 8. To create and access VM instances and demonstrate various components such as EC2, S3, Simple DB, and DynamoDB on AWS platform.
- 9. Illustrate Software as a Service to understand on-demand application delivery and Virtual desktop infrastructure using technology like Ulteo
- 10. Case Study on Fog Computing to gain a basic understanding of implementation/applications of fog computing.

CYBER SECURITY

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

A basic knowledge of computer science concepts, understanding of operating systems and networks, programming experience preferably in C, C++, Java, or Python, familiarity with databases and web applications, and a basic understanding of information technology (IT) concepts.

Course Objectives

- 1. Gain a comprehensive understanding of fundamental and advanced cybersecurity principles.
- 2. Acquire hands-on skills for securing networks, systems, and applications.
- 3. Learn to identify common cybersecurity threats and develop strategies for prevention and incident response.
- 4. Explore legal frameworks, compliance requirements, and ethical issues in cybersecurity.
- 5. Study the latest developments and emerging trends in cybersecurity.

Course Outcomes

By the end of this course, students should be able to:

- 1. Understand and explain fundamental cybersecurity concepts, including security frameworks and standards.
- 2. Identify and describe various cyber threats and their mitigation strategies.
- 3. Apply secure practices in network and system security, ensuring protection from threats.
- 4. Analyze compliance, regulatory, and legal aspects of cybersecurity, including incident response and forensics.
- 5. Explore emerging trends and advanced cybersecurity topics, demonstrating knowledge of modern threats and technologies.

CO-PO Articulation Matrix

Unit – I

Fundamentals of Cybersecurity: Definition and Scope of Cybersecurity, Cybersecurity's Role in Modern Society, **Basic Security Concepts:** Confidentiality, Integrity, and Availability (CIA triad), Authentication, Authorization, and Accountability (AAA), **Types of Cyber Threats:** Malware- viruses, worms, Trojans, ransomware, Phishing, social engineering, DoS/DDoS attacks, advanced Persistent Threats (APTs), **Cybersecurity Frameworks and Standards:** NIST Cybersecurity Framework, ISO/IEC 27001, Common Cybersecurity Maturity Models

Network and System Security- Network Security Basics: Firewalls, Intrusion Detection Systems (IDS), Intrusion Prevention Systems (IPS), Virtual Private Networks (VPNs), Network segmentation and VLANs, **Network Security Practices:** Secure network architecture design, Defense-in-depth and zero trust architecture, **System Security:** Secure operating systems, Hardening systems and secure configuration management, Patch management and vulnerability scanning.

Unit – III

Application Security and Secure Software Development- Application Security Principles: Secure coding practices, Common software vulnerabilities, Secure development lifecycle (SDLC), **Web Application Security:** Cross-Site Scripting (XSS), SQL Injection, Cross-Site Request Forgery (CSRF), Web application firewalls (WAFs), Web security best practices, **DevSecOps and Secure Development:** Integration of security in DevOps, Automation of security tasks, Security testing in continuous integration/continuous deployment (CI/CD) pipelines

Unit – IV

Cybersecurity Management and Compliance- Cybersecurity Governance and Risk Management: Cybersecurity policies and procedures, Risk assessment and management frameworks, Business Continuity and Disaster Recovery (BC/DR), **Compliance and Regulatory Requirements:** General Data Protection Regulation (GDPR), Health Insurance Portability and Accountability Act (HIPAA), Legal and ethical considerations in cybersecurity, Data privacy and protection regulations.

Unit – V

Emerging Trends and Advanced Topics in Cybersecurity- Advanced Cyber Threats and Defense: Machine learning and artificial intelligence in cybersecurity, Behavioral analysis and threat hunting, Advanced Persistent Threats (APTs) and threat modeling, **Cloud and IoT Security:** Cloud security best practices, Securing Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Software as a Service (SaaS), IoT security challenges and solutions.

INDIAN CONSTITUTION AND FUNDAMENTAL PRINCIPLES

Instruction	1
Duration o	of SEE
SEE	
CIE	
Credits	

2 L Hours per Week 2 Hours 50 Marks

0

Pre-Requisites

Basic awareness of Indian Constitution and Government.

Course Objectives: The course will introduce the students to:

- 1. Understand the history of framing of the Indian Constitution.
- 2. Awar eness on Fundamental Rights, Duties and Directive Principles of State Policy.
- 3. Explore the organization of Union Government, and functions of President and Prime Minister.
- 4. Gain an insight into the inter-functionality of Union Legislature and Judiciary
- 5. Educate on the local governance and problems in development of rural and urban areas.

Course Outcomes

After successful completion of the course the students will be able to:

- 1. Understand the history of framing of the Indian Constitution and its features.
- 2. Assess the realization of Fundamental Rights and Directive Principles of State Policy.
- 3. Analyze the challenges to federal system and position of the President and the Prime Minister in the Union Government.
- 4. Underline the role of the Legislature and the Judiciary in Union Government and their mutual relations.
- 5. Evolve the development of the local governments in India and assess the role of Collector in district administration

CO-PO Articulation Matrix

Unit – I

Constitutional History and Framing of Indian Constitution

East India Company rule (1757-1857): Social, Economic, Political and Administrative impact of Company rule in India. British Rule (1858-1947): Indian National Movement, Government of India Acts 1909, 1919 and 1935, and Indian Independence Act 1947. Framing of the Indian Constitution: Constituent Assembly, Preamble and Salient Features.

Unit – II

Fundamental Rights, Duties and Directive Principles of State Policy

The Fundamental Rights: Features and significance of Rights. Fundamental Duties: Importance and the legal status of Duties. Directive Principles of State Policy: Socialist, Gandhian and Liberal-intellectual principles, importance and relevance.

Unit – III

Union Government and its Administration

Federalism: Division of legislative and financial powers between the Union and the State. Union Executive: Role and

position of President, Prime Minister and Council of Ministers. Emergency Provisions: National Emergency, Constitutional Emergency and Financial Emergency.

Unit – IV

Union Legislature and Judiciary

Union Legislature: Parliament of India-Composition and functions of Parliament, and Parliamentary Committees. Union Judiciary: Supreme Court of India-Composition and Functions.

Unit – V

Local Self Governments

Rural Local Governments: Zilla Parishad- CEO and functions of Zilla Parishad, Mandal Parishad- Role of Elected and Officials, Gram Panchayat- Sarpanch, Secretary and Gram Sabha. Urban Local Governments: Structure and functions of Municipalities and Municipal Corporations. District Collector: Powers and functions of Collector.

CYBER SECURITY LAB

Instruction Duration of SEE SEE CIE Credits 2 P Hours per Week 3 Hours 50 Marks 50 Marks

Pre-Requisites

A basic knowledge of computer science concepts, understanding of operating systems and networks, programming experience in C, C++, Java, or Python, familiarity with databases and web applications, and a basic understanding of information technology (IT) concepts.

Course Objectives

- 1. Gain comprehensive knowledge of fundamental and advanced cybersecurity concepts.
- 2. Develop hands-on skills for securing networks, systems, and applications.
- 3. Learn about compliance, governance, and risk management in cybersecurity.
- 4. Conduct vulnerability assessments and penetration testing.
- 5. Explore emerging trends and technologies, including AI-driven threat detection, zero-trust architecture, and cloud security.

Course Outcomes

By the end of this course, students should be able to:

- 1. Demonstrate skills in network and system security.
- 2. Apply secure practices in application security.
- 3. Analyze compliance and regulatory requirements in cybersecurity.
- 4. Conduct vulnerability assessments and penetration tests.
- 5. Understand emerging trends and technologies in cybersecurity.

CO-PO Articulation Matrix

List of Experiments

- 1. Perform a network scan, identify devices, and understand the significance of open ports and services. Discuss the security risks associated with exposed ports.
- 2. Configure basic firewall rules to allow/deny specific traffic. Test the firewall's effectiveness with simple penetration testing tools.
- 3. Create a basic web application and use OWASP ZAP or Burp Suite to find vulnerabilities like SQL injection and cross-site scripting (XSS). Implement secure coding practices to mitigate these issues.
- 4. Test the security of a wireless network and explore common attacks such as de-authentication and rogue access points. Understand WPA2/WPA3 encryption and proper wireless network configuration.
- 5. Run a vulnerability scan on a system or network. Identify and prioritize vulnerabilities, discussing their impact and potential mitigation strategies.
- 6. Set up a simple VPN connection to establish secure communication. Discuss potential vulnerabilities

in VPN configurations.

- 7. Implement basic encryption and decryption techniques using OpenSSL. Set up secure communication using SSL/TLS and understand certificate management.
- 8. Analyze a simple piece of malware in a sandbox environment to identify its behavior and infection vectors. Learn about basic reverse engineering techniques.

22CIE11

WRITING SECURE CODE

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

Fundamental understanding of programming languages, software development processes, cybersecurity principles, data structures, algorithms, development tools, web development concepts, and cryptography principles.

Course Objectives

- 1. Understand the importance of secure systems in diverse digital environments.
- 2. Learn the proactive security development process and its phases.
- 3. Apply security principles effectively in software design and development.
- 4. Implement security coding techniques to mitigate common vulnerabilities.
- 5. Foster a security-conscious culture within organizations through education and awareness.

Course Outcomes

By the end of this course, students should be able to:

- 1. Evaluate the necessity of secure systems across various application domains.
- 2. Demonstrate proficiency in designing and developing software following a proactive security approach.
- 3. Apply security principles like secure by design and default to ensure robust software security.
- 4. Implement effective security coding techniques to prevent and mitigate vulnerabilities.
- 5. Advocate for and contribute to a security-aware environment within organizations.

22CIE12

WRITING SECURE CODE LAB

Instruction Duration of SEE SEE CIE Credits 2 P Hours per Week 3 Hours 50 Marks 50 Marks

Pre-Requisites

A foundational understanding of programming concepts and software development alongside familiarity with computer security fundamentals.

Course Objectives

- 1. Develop proficiency in identifying and exploiting web application vulnerabilities.
- 2. Foster effective teamwork skills through collaboration using version control and issue-tracking tools.
- 3. Understand and apply threat modelling techniques to assess security risks in software systems.
- 4. Gain practical experience in identifying and exploiting buffer overflow vulnerabilities in programs.
- 5. Acquire skills in configuring user accounts and managing file permissions on Linux systems for improved security.

Course Outcomes

By the end of this course, students should be able to:

- 1. Proficiency in identifying and exploiting web application vulnerabilities using industry-standard tools.
- 2. Effective collaboration skills in team environments by utilizing version control and issue-tracking tools.
- 3. Ability to assess security risks in software systems through the application of threat modelling techniques.
- 4. Practical knowledge of identifying and exploiting buffer overflow vulnerabilities in programs.
- 5. Skills in configuring user accounts and managing file permissions on Linux systems to enhance security measures.

CO-PO Articulation Matrix

Unit – I

- 1. Identify and exploit vulnerabilities in a web application using Burp Suite or OWASP ZAP.
- 2. Collaborate in a team environment using Git for version control and Jira for issue tracking.
- 3. Conduct threat modeling using the STRIDE framework and assess associated risks.
- 4. Exploit buffer overflow vulnerabilities in C/C++ programs using debugging tools like GDB or Immunity Debugger.
- 5. Configure user accounts and file permissions on a Linux system using command-line tools.
- 6. Implement basic cryptographic operations using Python cryptography library or OpenSSL.

- 7. Implement data protection measures in a database management system using SQL queries and encryption libraries like bcrypt.
- 8. Perform input validation and sanitization on web forms using browser developer tools.
- 9. Develop and test a multilingual web application, exploring localization libraries.
- 10. Conduct interactive exercises and discussions to raise awareness about security best practices in a classroom setting.

SOCIAL NETWORK ANALYTICS

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

- 1. A course on "Web Technologies";
- 2. A course on "Computer Networks";
- 3. A course on "Data Warehousing and Data Mining".

Course Objectives

This course aims to

- 1. Understand the concept of Social networks and related applications.
- 2. Learn Social network analysis software Tools and Libraries.
- 3. Understand social network Graphs and Community Mining Algorithms.
- 4. Learn visualization of social networks.
- 5. Analyze human behavior in social web and related communities.

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Design the social networks
- 2. Gain skills in tracking the social networks and its tools.
- 3. Use Open source tools to perform social network analysis.
- 4. Visualize social networks and analysis.
- 5. Predict human behavior in social network and related communities.

CO-PO Articulation Matrix

Unit – I

Introduction to Social Network Analytics: Social Networks Perspective - Analysis of Network Data - Interpretation of Network Data - Social Network Analysis in the Social and Behavioral Sciences - Metrics in social network analysis.

Unit – II

Social Network Analysis, Software Tools and Libraries: Data Representation, network measures, Modeling and aggregating social network data, Social network analysis software Tools and Libraries.

Cliques, Clusters, Components and Community Mining Algorithms Applications: Components and Sub graphs: Sub graphs - Ego Networks, Triads, Cliques, Hierarchical Clustering, Triads, Network Density and conflict. Density: Egocentric and Socio centric - Digression on Absolute Density – Community structure and Density, Centrality : Local and Global - Centralization and Graph Centers, Cliques and their intersections, Components and Citation Circles - Positions, Sets and Clusters.

Unit – IV

Visualizing Social Networks with Matrix: Matrix and node and link diagrams, Hybrid representations, cover networks, Community welfare, Collaboration networks, Co-Citation networks, Advances in Network Visualization - Elites, Communities and Influence, Applications of Social Network Analysis.

Unit – V

Predicting Human Behavior and Privacy Issues: Understanding and predicting human behavior for social communities - User data management - Inference and Distribution - Enabling new human experiences - Reality mining - Context - Awareness - Privacy in online social networks - Trust in online environment - Trust models based on subjective logic - Trust network analysis - Trust transitivity analysis - Combining trust and reputation - Trust derivation based on trust comparisons - Attack spectrum and countermeasures.

GENERATIVE AI

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Course Objectives

This course aims to

- 1. To learn the fundamental concepts of Generative AI
- 2. To acquire the knowledge of encoders, decoders and autoregressive models
- 3. To acquire the knowledge of various generative models for image generation, style transfer and text generation
- 4. To learn to apply transforms, prompt engineering and APIs for real world problems
- 5. To learn to implement develop application using chat GPTs and open API

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Understand the fundamental concepts and significance of Generative AI and the unique challenges associated with generative models.
- 2. Learn the structure, function, and applications of autoencoders and autoregressive models in machine learning.
- 3. Understand the principles, architecture, and applications of Generative Adversarial Networks for image generation and style transfer.
- 4. Grasp the architecture and functionality of transformers, and apply prompt engineering techniques using Hugging Face pretrained transformers and APIs.
- 5. Explore the advancements, capabilities, and practical applications of GPT models, including developing a GPT-3 powered question-answering application.

GENERATIVE AI LAB

Instruction Duration of SEE SEE CIE Credits 2 P Hours per Week 2 Hours 50 Marks 50 Marks 1

Course Objectives

- 1. Understand fundamental concepts of generative AI models including autoencoders, GANs, and transformers.
- 2. Gain proficiency in implementing generative AI models using TensorFlow or PyTorch.
- 3. Learn to evaluate and interpret the performance of generative AI models effectively.
- 4. Explore real-world applications of generative AI across various domains such as image generation and natural language processing.
- 5. Enhance problem-solving skills by experimenting with different model architectures and datasets in generative AI tasks.

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Gain comprehensive understanding of generative AI concepts including autoencoders, autoregressive models, GANs, and transformer models.
- 2. Develop proficiency in implementing various generative AI models using TensorFlow or PyTorch.
- 3. Learn to evaluate model performance using appropriate metrics and analyze results effectively.
- 4. Enhance creative problem-solving abilities by experimenting with architectures, datasets, and hyperparameters.
- 5. Gain insights into real-world applications of generative AI models such as image generation, style transfer, and question answering.

LIST OF EXPERIMENTS:

- 1. Implement a basic autoencoder using TensorFlow or PyTorch and train it on a dataset like MNIST for image reconstruction.
- 2. Explore different regularization techniques such as L1/L2 regularization or dropout and compare their effects on the autoencoder's performance.
- 3. Implement a variational autoencoder (VAE) and train it on a dataset like FashionMNIST to generate new images.
- 4. Implement a basic autoregressive model like the Fully Visible Sigmoid Belief Network (FVSBN) using PyTorch or TensorFlow and train it on a sequential dataset like time series data.
- 5. Implement NADE and train it on a dataset like CIFAR-10 for image generation.
- 6. Implement MADE and train it on a dataset like CelebA for image generation.

- 7. Implement a Vanilla GAN using TensorFlow or PyTorch and train it on a dataset like CIFAR-10 for image generation.
- 8. Implement Progressive GAN and train it on a large dataset like LSUN for high-resolution image generation.
- 9. Implement a style transfer algorithm using GANs and apply it to images from the CIFAR-10 dataset.
- 10. Implement a basic transformer model using PyTorch or TensorFlow and train it on a text dataset like WikiText-2 for language modeling.
- 11. Fine-tune a pre-trained GPT model on a specific task such as sentiment analysis using a dataset like IMDB reviews.
- 12. Utilize the OpenAI API to build a question-answering application powered by GPT-3, allowing users to input questions and receive relevant answers.

22CAE17

IMAGE PROCESSING

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

Signal Processing

Course Objectives

The objectives of this course are

- 1. To introduce basics of visual perception, sampling, quantization and representation of Digital images.
- 2. To introduce spatial domain and frequency domain filtering techniques necessary for Image processing operations.
- 3. To learn advanced image analysis techniques such as image restoration, image Compression, image segmentation.
- 4. To learn techniques of multi resolution methods, wavelets and morphological Processing.
- 5. To understand the applications of image processing.

Course Outcomes

After completion of this course, students will be able to

- 1. Understand the basic image enhancement techniques in spatial & frequency domains.
- 2. Understand the basics of multi-resolution techniques.
- 3. Understand the basics of segmentation methods.
- 4. Apply this concept for image handling in various fields.
- 5. Knowledge about Morphological operations.

CO-PO Articulation Matrix

Unit – I

Fundamentals of Image Processing: Introduction, examples, fundamental steps, components, elements of visual perception, light and electromagnetic spectrum, image sensing and acquisition, image sampling and quantization, basic relationships between pixels. **Intensity Transformations and Spatial Filtering**: Background, some basic intensity transformation functions, histogram processing, fundamentals of spatial filtering, smoothing spatial filters, sharpening spatial filters, combining spatial enhancement methods.

Unit – II

Filtering in the Frequency Domain: Background, preliminary concepts, sampling and Fourier transform of sampled functions, discrete Fourier transform (DFT) of one variable, extension to functions of two variables, some properties of the 2-D discrete Fourier transform, basics of filtering in the frequency domain, image smoothing, image sharpening, homo- morphic filtering.

Unit – III

Image Restoration: Noise models, restoration in the presence of noise only-spatial filtering, periodic noise reduction by frequency domain filtering, linear degradation, position-invariant degradation, estimating the

degradation function, inverse filtering, minimum mean square error filtering, constrained least squares filtering, geometric mean filter.

Unit – IV

Wavelets and Multi Resolution Processing: Background, multi-resolution expansions, wavelet transforms in one dimension, the fast wavelet transform, wavelet transforms in two dimensions, wavelet packets. **Image Compression**: Fundamentals, image compression models, elements of information theory, error free compression, lossy compression, image compression standards.

Unit – V

Image Segmentation: Fundamentals, point, line and edge detection, thresholding, region-based segmentation, segmentation using morphological watersheds, the use of motion in segmentation. **Morphological Image Processing**: Preliminaries, erosion and dilation, opening and closing, the Hit-or-Miss transformation, some basic morphological algorithms, some basic gray-scale morphological algorithms.

IMAGE PROCESSING LAB

Instruction Duration of SEE SEE CIE Credits 2 L Hours per Week 3 Hours 50 Marks 50 Marks 1

Pre-Requisites

Course Objectives

The objectives of this course are

- 1. To understand the fundamental concepts of Image processing.
- 2. To explore Discrete Fourier Transform for 1-D and 2-D signal.
- 3. To apply filtering techniques on 1-D and 2-D Images.
- 4. To apply gray scale morphological algorithms for edge image processing.

Course Outcomes

On successful completion of the course learner will be able to:

- 1. Study the image fundamentals, mathematical transforms necessary for image processing.
- 2. Apply the concept of spatial filtering techniques.
- 3. Implement Digital Signal Transform techniques DFT.
- 4. Use the enhancement techniques for digital Image Processing
- 5. Implement the concept of gray scale morphological algorithms.

CO5	3	2	2	2	3	-	-	-	1	1	1	3

CO-PO Articulation Matrix

LIST OF EXPERIMENTS:

- 1. Display of Gray scale Images.
- 2. Histogram Equalization.
- 3. Design of Non-linear Filtering.
- 4. 2-D DFT and DCT.
- 5. Filtering in frequency domain.
- 6. Display of colour images.
- 7. Conversion between colour spaces.
- 8. DWT of images.
- 9. Segmentation using morphological watershed algorithm.
- 10. Segmentation using gray-scale morphological algorithms.

22ADE06

EXPLORATORY DATA ANALYSIS AND VISUALIZATION

Instruction Duration of SEE SEE CIE Credits 3 Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

Python Programming

Course Objectives

This course aims to

- 1. Introduce the Numpy library in Python to support storage and operations on large multidimensional arrays and matrices
- 2. Introduce large collection of mathematical functions to operate on multidimensional sequential data structures
- 3. Demonstrate the functionality of the Pandas library in Python for open source data analysis and manipulation
- 4. Demonstrate Data Aggregation, Grouping and Time Series analysis with Pandas
- 5. Introduce the Matplotlib library in Python for creating static, animated and interactive visualizations

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Create, manipulate, and analyze numerical data using NumPy arrays and associated functions.
- 2. Perform various preprocessing operations on datasets using Pandas Series and DataFrame objects.
- 3. Combine and manipulating complex datasets using a variety of Pandas techniques, including concatenation, merging, grouping, aggregation, and time series analysis,
- 4. Apply inferential statistics to analyze data, draw valid conclusions about populations, based on hypothesis testing, confidence intervals, and correlation analysis.
- 5. Create and interpret different types of data visualizations using Matplotlib and Seaborn

CO-PO Articulation Matrix

Unit – I

Introduction to Numpy: Data types in Python - Fixed type arrays, creating arrays, array indexing, array slicing, reshaping arrays, array concatenation and splitting, Universal Functions, Aggregations, Broadcasting rules, Comparisons, Boolean Arrays, Masks Fancy Indexing, Fast Sorting using np.sort and np.argsort, partial sorting Creating Structured Arrays, Compound types and Record Arrays.

Introduction to Pandas: Series Object, DataFrame Object, Data Indexing and Selecting for Series and DataFrames, Universal Functions for Index Preservation, Index Alignment and Operations between Series and DataFrames, Handling missing data, operating on Null values, Hierarchical Indexing.

Unit – III

Combining Datasets: Concat, Append, Merge and Joins, Aggregation and Grouping, Pivot Tables, Vectorized String Operations, Working with Time Series, High-Performance functions - query() and eval()

Unit – IV

Inferential Statistics - Normal distribution, Poisson distribution, Bernoulli distribution, z-score, p-score, One- tailed and two-tailed, Type 1 and Type-2 errors, Confidence interval, Correlation, Z-test vs T-test, F-distribution, Chi-square distribution, the chi-square test of independence, ANOVA

Unit – V

Visualization with Matplotlib : Simple Line plots, Scatter plots, Visualizing errors, Density and Contour plots, Histograms, Binnings, Multiple subplots, Three-dimensional plotting with Matplotlib, Geographic data with Basemap, Visualization with Seaborn.

Textbook:

- 1. Jake VanderPlas, "Python Data Science Handbook", O'Reilly Media, 2016.
- 2. Samir Madhavan, "Mastering Python for Data Science", Packt Publishing, 2015.

22ADE07

EXPLORATORY DATA ANALYSIS AND VISUALIZATION LAB

Instruction Duration of SEE SEE CIE Credits 2 Hours per Week 3 Hours 50 Marks 50 Marks 1

Pre-Requisites

Python Programming

Course Objectives

- 1. Impart a strong foundational understanding of NumPy arrays and their role in efficient numerical computing within Python.
- 2. Familiarize students with the diverse array of mathematical functions to perform a wide range of data manipulations and analyses.
- 3. Guide students to proficiently clean, transform, and analyze real-world datasets using pandas.
- 4. Facilitate the exploration of advanced Pandas features, such as hierarchical indexing and data merging and joining,
- 5. Equip students with skills to create informative and engaging visualizations using Matplotlib and Seaborn.

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Apply indexing, slicing, and reshaping techniques to extract, transform, and analyze numerical data within NumPy arrays.
- 2. Perform arithmetic operations, broadcasting, and other numpy functions to efficiently process and manipulate numerical data.
- 3. Apply Boolean masks and conditional statements to filter specific elements/from NumPy arrays
- 4. Implement various pandas functions to handle missing data, such as imputation, deletion, or interpolation, to ensure data quality and reliability.
- 5. Generate a wide range of 2D and 3D visualizations, including basic Matplotlib plots and specialized statistical graphs using Seaborn to draw useful insights about the data.

CO-PO Articulation Matrix

LIST OF EXPERIMENTS:

- 1. Implement indexing, slicing and reshaping on numpy arrays.
- 2. various operations on NumPy arrays, including arithmetic calculations, broadcasting
- 3. Apply Boolean operations on a numpy array to filter specific elements, sort the array, and manipulate it using Boolean masks.
- 4. Demonstrate identifying and handling missing data within Pandas DataFrames using various

techniques, such as filling missing values, dropping rows or columns with missing data.

- 5. Demonstrate interpolation techniques to estimate missing values.
- 6. Demonstrate hierarchical indexing and Multi-Criteria based data retrieval using pandas.
- 7. Combine and analyze datasets using Pandas operations including merge, join, concatenate, grouping and aggregation.
- 8. Plot different types of visualizations (e.g., line plot, scatter plot, histogram, bar plot) using matplotlib.
- 9. Demonstrate 3D visualizations using matplotlib.
- 10. Create various Seaborn visualizations such as pair plots, contour plots, violin plots, and box plots to represent different aspects of your data.
- 11. Case Study: Perform exploratory data analysis on any given dataset.

Textbook:

- 1. Jake VanderPlas, "Python Data Science Handbook", O'Reilly Media, 2016.
- 2. Samir Madhavan, "Mastering Python for Data Science", Packt Publishing, 2015.

22CIE13

3D Modelling & Animation

Instruction Duration of SEE SEE CIE Credits

Pre-Requisites

3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Programming in C, C++, Java or Python, Computer Graphics, Working with OS (Windows, Linux or macOS).

Course Objectives

The objectives of this course are

- 1. Learn the basics of using Maya to transform things in space using Blender's modelling tools.
- 2. Acquire knowledge of the principles of colour application and polygon tool modelling.
- 3. Understand the foundations of NURBS and curve-based geometry, as well as how to create NURBS surfaces.
- 4. Gain expertise in creating complicated materials and lighting, materials, textures, and UVs.
- 5. Examine the fundamentals of Animation Effects and Practice with the Self-Bouncing Ball.

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Utilize fundamental concepts of 3D modelling to proficiently navigate Maya's interface.
- 2. Understanding the foundational principles of polygonal geometry, including vertices, edges, and faces, and their roles in 3D modelling.
- 3. Understanding the principles of Non-Uniform Rational B-Splines (NURBS) and curve-based geometry, comprehending their significance in 3D modelling and design.
- 4. Applying the principles of lighting, materials, textures, and UV mapping in the context of 3D rendering and visualization.
- 5. Mastering keyframe animation workflows to create smooth and believable motion sequences, including character locomotion, facial expressions, and object interactions..

CO5	3	1	2	2	3	-	-	-	-	-	-	3

CO-PO Articulation Matrix

Unit – I

Introduction: 3D Art, understanding 3D space, Cartesian mapping & 3D Coordinates, The Grid, Global and Local Coordinate systems, Hierarchies and Local Transforms, Pivots & Snaps, Freezing and Resetting Transforms, Exercise: Transforming objects in Space with MAYA.

Unit – II

Polygonal Geometry: Model and Polygon Concepts, Triangulation and Polygons, Create Models: Polygon Primitives, Edit Polygon Models: Sub-object editing, Chamfer & Bevel, Extrude, Combining and mering multiple polygon objects, Advanced Polygon modelling tools, Smoothing, Exercise: Modelling with Polygon tools.

Unit – III

NURBS & Curve-Based Geometry: Curve, NURBS curves and Create, Edit of NURBS Curves, NURBS Curves uses, NURBS surfaces creation and Edit, Creation of NURBS surfaces out of curved lines, Projected curves and Trim Surfaces, Conversion of NURBS into Polygons, Uses of NURBS, Exercises.

Unit – IV

Lighting, Materials, Textures & UV's: Rendering, GPU Vs CPU Rendering, Things required to render a scene: Light, Camera, Materials, Camera and Camera Attributes in 3D, Shading- Polygon Normal, Lighting and Types of Lights, Common light attributes, Depth map shadows and Ray Tracing Use, Textures and UV mapping, Image rendering using Software, Exercise: Creating a complex material.

Unit – V

Animation: Basic concepts & Definition, Keyframes and Keyframing, Methods of Animation: Pose based animation, Rotoscoping and Motion Capture, Editing Motion Curves, Acceleration and Deceleration: Graph Curves and tangents, Exercise: The Ball that bounces itself.

Textbook:

Essential-Skills-Modelling-Rendering-Animation, Author Nicholas Bernhardt Zeman, CRC Press, Taylor and Francis Group

SOCIAL ENGINEERING

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

Programming and Problem Solving, Operating System, Computer Networks, Cyber Security.

Course Objectives

- 1. Understand social engineering, identify common attacks, and provide strategies for overcoming it.
- 2. Apply behavioral and technical controls in Social Engineering.
- 3. Identify how to communicate basic security awareness to others.

Course Outcomes

On Successful completion of the course, student will able to,

- 1. Apply up to date social engineering techniques and ethical consideration.
- 2. Extract Intelligence from publicly available sources to support intelligent needs and to discover vulnerabilities in IT Systems.
- 3. Explore different types of social engineering attack.
- 4. Identity the attacks and victims.
- 5. Acquire knowledge on tactics and strategies on how to protect network against attack.

NATURAL LANGUAGE PROCESSING

Instruction Duration of SEE SEE CIE Credits 3 Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

Course Objectives

The objectives of this course are

- 1. Understand various Natural Language Processing Fundamentals.
- 2. Understand probabilistic NLP and classification of text using Python's NLTK Library
- 3. Understand various text representations and labelling techniques.
- 4. Understand various NLP models and named entities.
- 5. Learn RNN for NLP.
- 6. Understand usage of GRU and LSTM models for translation.
- 7. Understand various applications of NLP.

Course Outcomes

On Successful completion of this course, student will be able to

- 1. Understand the fundamentals of Natural Language Processing, manipulate and analyse language data.
- 2. Demonstrate key concepts from NLP, text representation and linguistics to describe and analyse language.
- 3. Demonstrate the word embedded techniques and classification of the text.
- 4. Make use of the Deep learning and Transformers for NLP.
- 5. Develop NLP applications using appropriate NLP tools and techniques.

Unit – I

Introduction to NLP: Definition, History, NLP in the real world, Approaches to NLP, NLP Pipeline. Language Processing and Python: Computing with Language: Texts and Words, A Closer Look at Python: Texts as Lists of Words, Computing with Language: Simple Statistics.

Accessing Text Corpora and Lexical Resources: Accessing Text Corpora, Conditional Frequency.

Unit – II

Basic Vectorization approaches of Text Representation : One-Hot Encoding, Bag of Words, Bag of N-Gram, TF-IDF; Distributed universal text and handcrafted feature Representations, Neural language models, N-gram language model. Processing Raw Text: Accessing Text from the Web and from Disk, Text Processing with Unicode. Categorizing and Tagging Words: Using a Tagger, Tagged Corpora, Mapping Words to Properties Using Python Dictionaries, Automatic Tagging.

Unit – III

Word Embeddings: Count Vector, Frequency based Embedding, Prediction based Embedding, Word2Vec and Glove. Learning to Classify Text: Supervised Classification and Text classification with Machine learning algorithms.

Unit – IV

Deep learning for NLP: RNN for language model, Sequence Labelling and Sequence Classification, Encoder-Decoder with RNNs, GRUs and LSTMs for machine translation, Convolutional neural networks for sentence classification and Evolution metrics for NLP. Transformers for NLP: Attention , Transformers and BERT.

Unit – V

Case Study on NLP: Sentiment analysis, Machine translation, Automated speech recognition systems, Question-answering based systems, Topic modelling, Text Generation and Summarization.

Textbook:

- 1. Steven Bird, Ewan Klein, and Edward Lope, Natural Language Processing with Python. O"Reily,2009.

ROBOTIC PROCESS AUTOMATION

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

Course Objectives

- 1. To provide insights on robotic process automation (RPA) technology and its value proposition
- 2. To introduce different platforms for RPA
- 3. To learn different types of variables, control flow and data manipulation techniques
- 4. To familiarize with Image, Text and data Tables Automation
- 5. To describe various types of Exceptions and strategies to handle them.

Course Outcomes

On Successful completion of the course, student will

- 1. Gain insights into Robotic Process Automation Technology
- 2. Acquire knowledge of RPA Platforms and components
- 3. Identify and understand Image, Text and Data Tables Automation
- 4. Understand various control techniques and OCR in RPA
- 5. Describe Exception Handling and Debugging techniques

SOFTWARE DEFINED NETWORKS

Instruction
Duration of SEE
SEE
CIE
Credits

3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

Operating Systems, Computer Networks

Course Objectives

This course aims to:

- 1. Develop knowledge in networking fundamentals
- 2. Gain conceptual understanding of software defined networks
- 3. Study industrial use-cases of SDN

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Analyse the conventional network and SDN paradigm.
- 2. Describe the major requirements for the design of an SDN protocol.
- 3. Plan, configure and troubleshoot switches and controllers, and SDN networks.
- 4. Analyse the performance of SDN by using verification and troubleshooting techniques.
- 5. Evaluate the emerging SDN applications.

ENVIRONMENTAL SCIENCE

Instruction Duration of SEE SEE CIE Credits 2 L Hours per week 2 Hours 50 Marks -Non Credit

Course Outcomes:

This course aims to:

- 1. Identify various natural resources and effects of their over utilization.
- 2. Outline the working mechanism of ecosystem.
- 3. Illustrate the importance of bio-diversity conservation.
- 4. Identify remediation measures for environmental pollution through legislations.
- 5. Explain environmental issues and possible sustainable solutions.

CO-PO Articulation Matrix

UNIT-I

Environmental Studies: Definition, Scope and importance, need for public awareness.

Natural resources: Use and over utilization of Natural Resources - Water resources, Food resources, Forest resources, Mineral resources, Energy resources, Land resources.

UNIT-II

Ecosystems: Concept of an ecosystem, structure and function of an ecosystem, role of producers, consumers and decomposers, energy flow in an ecosystem, food chains, food webs, ecological pyramids, Nutrient cycling, Bio geo chemical cycles, Terrestrial and Aquatic ecosystems.

UNIT-III

Biodiversity: Genetic, species and ecosystem biodiversity, Bio-geographical classification of India, India as a Mega diversity nation. Values of biodiversity, hot-spots of biodiversity, threats to biodiversity, endangered and endemic species of India, methods of conservation of biodiversity.

UNIT-IV

Environmental Pollution: Cause, effects and control measures of air pollution, water pollution, marine pollution, soil pollution, noise pollution and Solid waste management, nuclear hazards

Environmental Legislations: Environment protection Act, Air, Water, Forest & Wild life Acts, issues involved in enforcement of environmental legislation, responsibilities of state and central pollution control boards

UNIT-V

Social issues and the environment: Water conservation methods: Rain water harvesting and watershed management, Environmental ethics, Sustainable development and Climate change: Global warming, Ozone layer depletion, forest fires, and Contemporary issues.

Text Books:

- 1. Y. Anjaneyulu, "Introduction to Environmental Science", B S Publications, 2004.
- 2. Suresh K. Dhameja, "Environmental Studies", S. K. Kataria & Sons, 2009.

Suggested Reading:

- 1. C. S. Rao," Environmental Pollution Control Engineering", Wiley, 1991.
- 2. S. S. Dara, "A Text Book of Environmental Chemistry & Pollution Control", S. Chand Limited, 2006

22CIE15

Extended Reality

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 50 Marks 50 Marks 3

Pre-Requisites

Basic knowledge on computer hardware and software components.

Course Objectives

- 1. To understand immersive technology current state of development for designing and developing immersive experiences.
- 2. To understand the sensory, emotional and narrative immersion for best practice user interface and experience design.
- 3. To understand the intersection of AI and VR/XR, looking at how AI is being used to improve everything from graphics rendering to user interaction.
- 4. To understand the applications of VR/XR in healthcare, discussing the latest research, challenges and opportunities for healthcare professionals.
- 5. To understand the design principles that guide the creation of immersive experiences, from 3D modelling to user interface design.

Course Outcomes

By the end of this course, students should be able to:

- 1. Define and explain principles in immersive technology for designing and developing immersive experiences.
- 2. Explain the sensory, emotional and narrative immersion for best practice user interface and experience design.
- 3. Model and create intersection of AI and VR/XR to user interaction.
- 4. Design the applications of VR/XR in healthcare, discussing the latest research, challenges and opportunities for healthcare professionals.
- 5. Choose the creation of immersive experiences, from 3D modelling to user interface design.

CO5	3	3	3	3	3	-	-	-	-	-	-	3

CO-PO Articulation Matrix

Unit – I

Immersive Technology: Introduction Promise and Potential, Knowing immersive technologies - AR/VR/ExR, Overview of immersive technologies, AR/VR Milestones and breakthroughs, Current state, Statistical data, Potential and Limitations of immersive technologies. The Psychology of Presence in Immersive Technologies- Knowing presence, Theories of presence, Factors contributing to presence, Measuring, Advantages and limitations of measuring presence and Application of presence.

Unit – II

Designing Immersive Experience - Introduction, designing for sensory immersion, Designing for emotional immersion, Designing for narrative immersion, Best practices for user interface and experience design. **Evolution of VR Hardware -** Introduction to virtual reality hardware, The rise of consumer virtual reality, Virtual reality hardware design challenges, The future of virtual reality hardware, Role of haptic feedback on virtual reality hardware, Types of haptic feedback, Benefits and limitations of haptic technology, Case

studies

Unit – III

AI in AR/VR/XR: -Introduction, AI and its usage in VR/AR, Graphic rendering, Natural language processing, User interaction, Predictive analytics. Business Landscape of AR/VR/XR- Introduction, Funding and investment, Funding and its challenges for VR/XR industry, Monetization strategies, User adoption and marketing, Technology challenges, Case studies.

Unit – IV

Applications of AR/VR/XR in Healthcare: -Introduction, Diagnosis and treatment, Rehabilitation and physical therapy Medical education and training, Use of immersive technology in patient education and engagement, Case studies, Design principles, Medical realities. **Applications of AR/VR/XR in Education:** Introduction, Immersive learning environment, Simulations and training, Personalized learning, Collaborative learning, Case studies.

Unit – V

Ethics in Immersive Technologies: Introduction to ethics in immersive technologies, Safety and physical health Psychological and emotional impact, Case studies. **3D Modeling and User Interface Design:** Introduction to 3D modelling, Modelling technique, Artistic and technical balance, Real-time 3D and game engines, User interface design principles, User interface design software and workflow, Implementing UIs in 3D environment, Case Study: Building VR Applications with Unity.

22CIE16

Emerging Threats & Defenses

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

Basic understanding of computer networks (TCP/IP, network protocols), Operating System Fundamentals (Windows, Linux)

Course Objectives

- 1. Develop a comprehensive understanding of emerging cybersecurity threats and their potential impact on critical infrastructure and information systems.
- 2. Analyze various attack vectors and exploit techniques used by cyber adversaries.
- 3. Evaluate and implement effective defense strategies to mitigate emerging threats and vulnerabilities.
- 4. Explore advanced security concepts like cryptography, intrusion detection, and secure coding practices.
- 5. Foster critical thinking and problem-solving skills to stay ahead of the evolving cyber threat landscape.

Course Outcomes

By the end of this course, students should be able to:

- 1. Critically analyze emerging cyber threats and their potential impact on organizations.
- 2. Gain a deeper understanding of attack vectors and exploit techniques cybercriminals use.
- 3. Equipped to evaluate and implement appropriate defense strategies to mitigate emerging threats.
- 4. Apply advanced security concepts like cryptography and intrusion detection to real-world scenarios.
- 5. Demonstrate critical thinking and problem-solving skills to stay ahead of the evolving cyber threat landscape.

CO5	3	2	3	3	2	-	-	-	-	-	3	2	1	2	3

CO-PO Articulation Matrix

Unit – I

Understanding Cyber Threat Landscape, Emerging Threats, Overview of evolving cyber threats, including Advanced Persistent Threats (APTs) and their impact on cybersecurity, Traditional vs. Emerging Threats, Comparison with real-world examples of cyberattacks.

Unit – II

Exploitation Techniques and Attack Vectors, Significance of zero-day exploits, common types of advanced malware, Impact of supply chain attacks, and exploitation of third-party software vulnerabilities. Emphasis on secure software development practices, Common web vulnerabilities

and their mitigation, Man-in-the-Middle (MitM) attacks, and network intrusion techniques.

Unit – III

Defense Strategies and Mitigation Techniques, Network Security Fundamentals, Role of firewalls, types, Intrusion Detection Systems (IDS), and Intrusion Prevention Systems (IPS). Importance of identifying, prioritizing, and patching vulnerabilities. Overview of vulnerability scanning tools and automated patching solutions. principles of secure system design, secure coding practices, and common vulnerabilities.

Unit – IV

Blockchain in Security- Applications in cybersecurity, secure audit trails, identity management, and limitations. Machine Learning in Cybersecurity- Use of machine learning for anomaly detection and intrusion detection. Benefits and limitations. Security Automation and Orchestration (SOAR)-Role of SOAR platforms in automating security tasks and improving threat response times. Internet of Things (IoT) Security- Common IoT vulnerabilities and best practices for securing IoT devices.

Unit – V

Social Engineering and Ethical Considerations, Social Engineering and Phishing- Definition of social engineering, common techniques, and human psychology in social engineering exploits. Preventing Social Engineering Attacks- Strategies for raising awareness, ethical hacking guidelines, and legal considerations surrounding hacking.

Textbook:

- 1. "Cybersecurity: The Complete Reference" by William Stallings, 1st edition, 2012, McGraw-Hill Education

22ADE29

COMPUTER VISION

Instruction Duration of SEE SEE CIE Credits

Pre-Requisites

Knowledge on Matrices, Linear Algebra and Calculas

Course Objectives

This course aims to

- 1. To introduce the fundamentals of image formation
- 2. To provide understanding of segmentation and Augmentation techniques in Computer Vision
- 3. To Identify and interpret appropriate sources of information relating to computer vision.
- 4. To analyse, evaluate and examine existing practical computer vision
- 5. To Design and develop practical and innovative image processing and computer vision applications.

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Understand the fundamental concepts in computer vision.
- 2. Apply segmentation and augmentation techniques and descriptors.
- 3. Identify and interpret appropriate sources of information relating to computer vision.
- 4. Analyse, evaluate and examine existing practical computer vision.
- 5. Design and develop practical and innovative image processing and computer vision applications.

CO-PO Articulation Matrix

Unit – I

Introduction to Computer Vision and Basic Concepts of Image Formation: Introduction and Goals of Computer Vision and Image Processing, Image Formation Concepts, Fundamental Concepts of Image Formation: Radiometry, Geometric Transformations, Geometric Camera Models.

Unit – II

Fundamental Concepts of Image Formation: Camera Calibration, Image Formation in a Stereo Vision Setup, Image Reconstruction from a Series of Projections. **Image Processing Concepts**: Image Transforms, Image Enhancement, Image Filtering, Color Image Processing, Image Segmentation.

3 L Hours per Week 3 Hours 60 Marks 40 Marks 3 **Image Descriptors and Features**: Texture Descriptors, Colour Features, Edges/Boundaries, Object Boundary and Shape Representations, Interest or Corner Point Detectors, Histogram of Oriented Gradients, Scale Invariant Feature Transform, Speeded up Robust Features, Saliency.

Unit – IV

Fundamentals of Machine Learning: Linear Regression, Basic Concepts of Decision Functions, Elementary Statistical Decision Theory, Parameter Estimation, Clustering for Knowledge Representation, Dimension Reduction, Linear Discriminant Analysis.

Unit – V

Applications of Computer Vision: Artificial Neural Network for Pattern Classification, Convolutional Neural Networks, Autoencoders, Gesture Recognition, Motion Estimation and Object Tracking, Programming Assignments.

HUMAN COMPUTER INTERACTION

Instruction Duration of SEE SEE CIE Credits 3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Course Objectives

This course aims to:

- 1. Learn the foundations of Human Computer Interaction.
- 2. Familiarize with the design technologies for computer interaction.
- 3. Learn the design strategies, guidelines, models and theories for developing a user friendly interface.

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Understand the structure of models and theories of human computer interaction.
- 2. Understand the vision of a computer user.
- 3. Understand the recognition and remembrance limitations of a computer user.
- 4. Understand the design rules and design process.
- 5. Apply the models and theories of human computer interaction to real-time problems

 John Haugeland, "Mind Design II", 2nd Edition, Revised and enlarged edition, The MIT Press, 1997.

22CSE08

USER INTERFACE AND USER EXPERIENCE DESIGN

Instruction
Duration of SEE
SEE
CIE
Credits

3 L Hours per Week 3 Hours 60 Marks 40 Marks 3

Pre-Requisites

Fundamental Computer Skills, Knowledge of Web Technologies.

Course Objectives

This course aims to:

- 1. Familiarize students with the fundamental principles and concepts of user interface (UI) and user experience (UX) design.
- 2. Equip students with the practical skills and knowledge necessary to design effective UI/UX interfaces.
- 3. Understand the importance of applying user-centered design methods throughout the design process.

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Apply user-centered design principles to create interfaces that meet the needs and preferences of target users.
- 2. Demonstrate proficiency in designing intuitive user interfaces that are easy to navigate and understand.
- 3. develop the skills to create wireframes, prototypes, and mockups using industry-standard design tools.
- 4. Gain an understanding of accessibility guidelines and principles, designing interfaces that are accessible to users with disabilities.
- 5. Identify emerging trends and technologies in UI/UX design.

CO-PO Articulation Matrix

Unit –I

Introduction to UI/UX Design: Understanding UI/UX Design: Definition and importance of UI/UX design, Difference between UI and UX, Roles and responsibilities of UI/UX designers, Overview of the design process. **User-Centered Design Principles**: Principles of user-centered design, User research methods (interviews, surveys, observations), Creating user personas and scenarios, Conducting user journey mapping exercises.

Unit –II

Design Fundamentals: Basic principles of visual design (layout, typography, color),Gestalt principles and their application in UI design, Applying visual hierarchy to improve user experience, Introduction to design tools (Sketch, Figma, Adobe XD). **Interaction Design**: Principles of interaction design, Designing effective navigation systems,Feedback mechanisms and user affordances Prototyping techniques for interaction design.

Unit –III

Usability and User Testing: Understanding usability principles, Nielsen's heuristics for user interface design, Conducting heuristic evaluations of UI designs, Usability testing methods (moderated vs. unmoderated, remote testing). **User Testing and Feedback:** Planning and conducting usability tests, Analyzing usability test results Incorporating user feedback into UI design iterations, Best practices for iterative design and testing cycles.

Unit –IV

Accessibility in UI/UX Design: Understanding accessibility guidelines (WCAG),Designing accessible interfaces for users with disabilities, Assistive technologies and their impact on UI/UX design. Emotional Design and Engagement: Principles of emotional design, Creating emotionally engaging user experiences, Strategies for enhancing user engagement and retention, Case studies of emotionally successful UI/UX designs.

Unit –V

Responsive and Mobile Design: Principles of responsive web design, Mobile-first design approach, Adapting layouts and content for different screen sizes, Testing and debugging responsive designs. **Designing for Mobile Platforms**: Mobile UI design patterns and conventions, Navigation and interaction patterns for mobile apps, Challenges and best practices for designing mobile interfaces, Introduction to mobile prototyping tools (InVision, Marvel).

Text Books:

- 1. Krug, S. (2006) Don't Make Me Think, Rider publication.
- 2. Don Norman (2013) "The Design of Everyday Things", Published by Basic Books.

Suggested Reading:

- 1. Jim K. (2010) Design Basics Index, How books.

22ECO02

REMOTE SENSING and GIS

Instruction Duration of SEE SEE CIE Credits 3L Hours per Week 3 Hours 60 Marks 40 Marks 3

Prerequisite: Basic knowledge of Geography is required

Course Objectives

This course aims to:

- 1. Explain the fundamental concepts of remote sensing and digital imaging techniques.
- 2. Make the students to understand the principles of thermal and microwave remote sensing.
- 3. Make the students understand the significance of GIS and the process of GIS.

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Demonstrate the understanding of basic concepts of remote sensing and interpreting energy interactions.
- 2. Choose an appropriate technique for a given scenario by appreciating the types of remote sensing.
- 3. Distinguish the principle behind the working of microwave and LiDAR sensing.
- 4. Apply Microwave remote sensing techniques
- 5. Explain the procedure for encoding data and geospatial data analysis.

CO-PO Articulation Matrix

Unit –I

Concept of Remote Sensing: Remote sensing definition, data, process, EM bands used in remote sensing, Interactions and recording of energy: interaction with atmosphere, interaction with earth surface features (soil, water, vegetation), recording of energy by sensors, Transmission, reception and processing, Image interpretation and analysis, Applications, Advantages, and limitations of Remote sensing.

Unit –II

Digital Imaging: Types of Remote sensing, Sensor resolutions, Digital Image, Sensor components, Principle of a long-track and across-track scanning, Hyperspectral Imaging, Thermal Remote Sensing.

Unit –III

Microwave Remote Sensing: Active and Passive Microwave Remote Sensing, Radar Imaging: Key components of imaging radar, viewing geometry, spatial resolution, principle of RAR, SAR and their

range resolution, Satellite Radar Imaging, LIDAR.

Unit –IV

Concept of Geographic Information Systems: Key components of GIS, joining spatial and attribute data, functions, advantages and applications of GIS, Spatial data model, Raster data model, Vector data model.

Unit –V

Process of GIS and Geospatial analysis: Data sources, encoding raster data, encoding vector data, encoding attribute data, linking spatial and attribute data, Geospatial data analysis methods database query, geospatial measurement, overlay operations, network analysis and surface analysis. Integration of GIS and remote sensing.

Prerequisite: A course on basics of electronics is required

Course Objectives

- 1. To familiarize the concepts related to cellular communication and its capacity.
- 2. To teach students the fundamentals of propagation models and multipath fading.
- 3. To describe diversity schemes applied in wireless communication and understand the latest Wireless technologies

Course Outcomes

- 1. Understand the overview of Wireless Communication.
- 2. Relate the cellular concepts like frequency reuse, hand off, coverage and capacity.
- 3. Analyse the mobile radio propagation with large scale and small scale fading.
- 4. Select the suitable diversity technique to combat the multipath fading effects.
- 5. Compare the multiple access techniques and apply to wireless standards

PO / PSO CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO5	2	1	1	1	1	1	1	-	-	1	-	1	1	1	1

CO-PO Articulation Matrix

Unit –I

An overview of wireless communications: Roadmap of cellular communications. First-Generation systems. Second-Generation systems. Third-Generation systems, Fourth-Generation systems and Fifth-Generation Systems.

Unit –II

The Cellular Concept-System Design Fundamentals: Introduction, Frequency Reuse, Channel Assignment Strategies. Handoff Strategies. Interference and System Capacity. Power Control for Reducing Interference.

Unit –III

Mobile Radio Propagation: Large-Scale Path Loss, Introduction to Radio Wave Propagation, Free Space Propagation Model, the Three Basic Propagation Mechanisms, Small-Scale Fading and Multipath: Small-Scale Multipath Propagation, Factors Influencing Small-Scale Fading, Doppler Shift, Types of Small-Scale Fading.

Unit –IV

Diversity Techniques: Practical Space Diversity Considerations- Selection Diversity, Feedback or Scanning, Maximal Ratio Combining Diversity Equal Gain Combining. Orthogonal frequency division multiplexing: Introduction, Principle of OFDM. OFDM transceivers Cyclic prefix, Spectrum

of OFDM, Fading mitigation in OFDM. Intercarrier interference.

Unit –V

Multiple access techniques: Duplexing: FDD versus TDD. FDMA. TDMA. CDMA . OFDMA. SDMA. **Wireless Standards:** Global System for Mobile (GSM). GSM Services and Features, GSM System Architecture, GSM Radio Subsystem. GPRS and EDGE- features.

Text Books:

- 1. Theodore S. Rappaport Wireless Communications Principles and Practice, 2nd Edition, Pearson Education, 2003.
- 2. Andreas F.Molisch Wireless Communications John Wiley, 2nd Edition, 2006.

22ECO05

PRINCIPLES OF EMBEDDED SYSTEMS

Instruction
Duration of SEE
SEE
CIE
Credits

3L Hours per Week 3 Hours 60 Marks 40 Marks 3

Prerequisite: Knowledge about computer Architectures, Microprocessors and Microcontrollers.

Course Objectives: Fundamental knowledge about electronic device is required

This course aims to:

- 1. To learn the fundamentals of the embedded system design.
- 2. To learn architecture details of embedded processors
- 3. To analyze various embedded applications and debugging tools.

Course Outcomes

Upon completion of this course, students will be able to:

- 1. Understand hardware and software details of embedded system.
- 2. Analyze the architecture and instruction set of embedded processors.
- 3. Develop the embedded system design cycle
- 4. Apply various debugging tools for embedded system applications.
- 5. Design different case studies for embedded applications

CO5	2	2	3	2	3	_	-	_	-	-	-	1	2	3	-

CO-PO Articulation Matrix

Unit –I

Introduction to Embedded systems: Embedded systems vs General computing systems, Classifications, Applications areas, Processor embedded into a system, Processor selection for embedded system, Embedded hardware units and devices in a system, Design metrics and Challenges in embedded system design.

Unit –II

Embedded Processors: PIC 18 Family Overview, Architecture, Instruction Set, Addressing modes, Timers and Interrupts of PIC 18. Capture/Compare and PWM modules of PIC 18.

Unit –III

Introduction to advanced processor architectures: ARM design philosophy. ARM data flow model, Register organization, Program Status Register, Pipeline, Introduction to exceptions. ARM instruction set, Introduction ARM cortex series, salient features.

Unit –IV

Embedded System Design Cycle: Embedded system design and co-design issues in system development process, Design cycle in the development phase for an embedded system. Embedded software development tools: Host and Target machines, Linker/Locators for embedded software, Embedded software into the target system.

Unit –V

Debugging tools and Applications: Integration and testing of embedded hardware, testing methods, Debugging techniques, Laboratory tools and target hardware debugging: Logic Analyzer, Simulator, Emulator and In-Circuit Emulator, IDE.

Case Studies: Design of Embedded Systems using Microcontrollers – for applications in the area of communications and automotives. (GSM/GPRS, CAN, Zigbee).

Text Books:

- 1. Raj Kamal, "Embedded Systems-Architecture, Programming and Design," 3/e, Tata McGraw Hill Education, 2015.
- 2. Andrew N.SLOSS, DomonicSymes Chris Wright "ARM System Developers Guide-Designing and optimizing system software" ELSEVIER 1st Edition2004.
- 3. Mazidi, MCKinlay and Danny Causey, "PIC Microcontrollers and Embedded Systems", Pearson Education. 2008.

Suggested Readings:

- 1. David E.Simon, "An Embedded software primer", Pearson Education, 2004.
- 2. Steve Furber "ARM System on Chip Architecture" 2/e Pearson education, 2000.

22EGO01

TECHNICAL WRITING SKILLS

Instruction Duration of SEE SEE CIE Credits 3L Hours per Week 3 Hours 60 Marks 40 Marks 3

Prerequisite: Language proficiency and the ability to simplify complex technical concepts for a diverse audience.

Course Objectives

The course will introduce the students to:

- 1. Process of communication and channels of communication in general writing and technical writing in particular.
- 2. Learn Technical Writing including sentence structure and be able to understand and use technology specific words.
- 3. Write business letters and technical articles.
- 4. Write technical reports and technical proposals.
- 5. Learn to write agenda, record minutes of a meeting, draft memos. Understand how to make technical presentations.

Course Outcomes

After successful completion of the course students will be able to:

- 1. Communicate effectively, without barriers and understand aspects of technical communication.
- 2. Differentiate between general writing and technical writing and write error free sentences using technology specific words.
- 3. Apply techniques of writing in business correspondence and in writing articles.
- 4. Draft technical reports and technical proposals.
- 5. Prepare agenda and minutes of a meeting and demonstrate effective technical presentation skills.

CO 5	1	1	1	1	-	1	1	1	3	3	2	2	1	1	1

CO-PO Articulation Matrix

Unit –I

Communication – Nature and process. **Channels of Communication** – Downward, upward and horizontal communication. Barriers to communication.

Technical Communication – Definition, oral and written communication. Importance and need for Technical communication. Nature of Technical Communication. Aspects and forms of Technical communication. Technical communication Skills – Listening, Speaking, Reading & Writing. **Unit –II**

Technical Writing – Techniques of writing. Selection of words and phrases in technical writing. Differences between technical writing and general writing. Abstract and specific words. Sentence

structure and requisites of sentence construction. Paragraph length and structure.

Unit –III

Business correspondence – Sales letters, letters of Quotation, Claim and Adjustment letters.

Technical Articles: Nature and significance, types. Journal articles and Conference papers, elements of technical articles.

Unit –IV

Technical Reports: Types, significance, structure, style and writing of reports. Routine reports, Project reports.

Technical Proposals: Definition, types, characteristics, structure and significance.

Unit –V

Mechanics of Meetings: Preparation of agenda, participation, chairing and writing minutes of a meeting. Memorandum. Seminars, workshops and conferences.

Technical Presentations: Defining purpose, audience and locale, organizing content, preparing an outline, use of Audio Visual Aids, nuances of delivery, importance of body language and voice dynamics.

Text Books:

22CEO01

INFRASTRUCTURE FOR SMART CITIES

Instruction
Duration of SEE
SEE
CIE
Credits

3L Hours per Week 3 Hours 60 Marks 40 Marks 3

Course Outcomes

At the end of the course, Student will be able to

- 1. Understand the necessity of infrastructural development for smart cities.
- 2. Illustrate the components and planning aspects of a smart city.
- 3. Outline smart transportation systems for smart cities.
- 4. Summarise the significance of disaster resilient infrastructure in smart cities.
- 5. Review policies and implementation of smart cities at national and global perspective.

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO5	2	-	-	-	-	1	-	-	-	-	3	-	2	-	3

CO-PO Articulation Matrix

Unit –I

Fundamental of smart city & Infrastructure: Introduction of Smart City, Concept of smart city, Objective for smart cities. Need to develop smart city, Challenges of managing infrastructure in India and world, various types of Infrastructure systems, Infrastructures need assessment

Unit –II

Planning and development of Smart city Infrastructure: Energy and ecology, solar energy for smart city, Housing, sustainable green building, safety, security, disaster management, economy, cyber security.

Unit –III

Intelligent transport systems: Connected vehicles, autonomous vehicles, GPS, Navigation system, traffic safety management, mobility services, E-ticketing.

Unit –IV

Disaster resilient Infrastructure: Electricity, sanitation and water supply systems, fire hazard management, earthquake resilient structures, ICT tools.

Unit –V

Infrastructure Management: System and Policy for Smart city, integrated infrastructure management systems, worldwide policies for smart city, Government of India - policy for smart city, Smart cities in India, Case studies of smart cities.

Text Books:

DISASTER RISK REDUCTION AND MANAGEMENT

Instruction
Duration of SEE
SEE
CIE
Credits

3L Hours per Week 3 Hours 60 Marks 40 Marks

Course Outcomes

Upon completion of this course, the student will be able to:

- 1. Explain the fundamental concepts of disaster management.
- 2. Demonstrate the principles and practices of disaster risk reduction management.
- 3. Identify stress and its management during disaster.
- 4. Outline institutional frame work at different levels of administration.
- 5. Evaluate disaster management study including data search, analysis and presentation as a case study.

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO4	2	-	-	-	2	2	3	-	-	-	-	1	-	-	-
CO5	2	-	-	-	-	2	3	-	-	-	-	1	-	-	-

CO-PO Articulation Matrix

Unit –I

Fundamental concepts in disaster management: Hazard and disaster-concepts, vulnerability and risk, Hazard and disaster type – Natural, Water- related, pandemic and Human induced hazards disasters. Causes and Impacts of disasters – Impacts on natural eco systems: physical, psychological and social impact. Disaster and financial resilience. Disaster vulnerability profile of India –Specific to geographical regions and states (as per regional significance).

Unit –II

Disaster Management Cycle: Rescue, Relief, Rehabilitation, Prevention, Mitigation and Preparedness. Disaster risk reduction (DRR). Community based DRR, institutions concerned with safety, disaster mitigation and construction techniques as per Indian standards and Early warning systems

Unit –III

Disaster Impacts Management: Trauma and stress management, First aid and emergency procedures Awareness generation strategies for the community on safe practices in disaster (as per regional significance)

Unit –IV

Institutional framework of disaster management in India: NDMA-SDMA, NDRF, civic volunteers, and NIDM. Phases of disaster/risk management and post-disaster responses. Compensation and insurance Applications of remote sensing & GIS in disaster management. Components of disaster management. Preparedness of rescue and relief, mitigation, rehabilitation & reconstruction. Institutional frame work of disaster management in India

Unit –V

Capacity building for disaster/damage mitigation: Structural and Nonstructural measures forcapacity building for disaster/damage mitigation. Disaster risk reduction strategies and national disaster management guidelines. Disaster management Act -2005. Regional issues as per regional

requirement/university can take minimum two topics as per high powered committee

Text Books:

ENERGY MANAGEMENT SYSTEM

(Open Elective)

Instruction Duration of SEE SEE CIE Credits 3L Hours per Week 3 Hours 60 Marks 40 Marks

Prerequisites: None.

Course Objectives

This course aims to

- 1. Know the concept of Energy Management.
- 2. Understand the formulation of efficiency for various Engineering Systems
- 3. Enable the students to develop managerial skills to assess feasibility of alternative approaches and drive strategies regarding Energy Management

Course Outcomes

After the completion of this course, the student will be able to

- 1. Know the current Energy Scenario and importance of Energy Conservation.
- 2. Understand the concepts of Energy Management, Energy Auditing.
- 3. Interpret the Energy Management methodology, Energy security and Energy Strategy.
- 4. Identify the importance of Energy Efficiency for Engineers and explore the methods of improving Energy Efficiency in mechanical systems, Electrical Engineering systems
- 5. Illustrate the Energy Efficient Technologies in Civil and Chemical engineering systems

CO-PO Articulation Matrix

1 - Slightly; 2 - Moderately; 3 - Substantially

Unit –I

Various forms of Energy and its features: Electricity generation methods using different energy sources such as Solar energy, wind energy, Bio-mass energy, and Chemical energy such as fuel cells. Energy Scenario in India, Impact of Energy on economy, development, and environment sectors of national and international perspective.

Unit –II

Energy Management-I: Defining Energy Management, need for Energy Management, Energy management techniques, importance of Energy Management, managing the Energy consumption, Energy Audit and Types, Energy Audit Instruments.

Unit –III

Energy Management-II: understanding Energy costs, bench marking, Energy performance, matching energy use to requirement, optimizing the input, fuel & Energy substitution, material and Energy balance diagrams, Energy pricing, Energy and Environment, Energy Security

Unit –IV

Energy Efficient Technologies-I: Importance of Energy Efficiency for Engineers, Energy Efficient Technology in Mechanical engineering: Compressed Air System, Heating, ventilation and air-conditioning, Fans and blowers, Pumps and Pumping Systems,

Energy Efficient Technology in Electrical engineering: Automatic Power Factor Controllers, Energy Efficient Motors, soft starters with energy saver, variable speed drives, energy efficient transformers, electronic ballast, occupancy sensors, energy efficient lighting controls, space cooling, energy efficiency of lifts and escalator, energy saving potential of each technology.

Unit –V

Energy Efficient Technologies-II: Energy Efficient Technology in Civil Engineering: Intelligent Buildings, And Various Energy Efficiency Rating Systems for Buildings, Green Buildings Energy Efficiency: management of green buildings, importance of embodied energy in selection of sustainable materials, green building design, waste reduction/recycling, rainwater harvesting, maintenance of the green buildings, green building certification, Renewable energy applications.

Energy Efficient Technology in Chemical Engineering: Green chemistry, Low carbon cements, recycling paper.

Text Books:

22EEO06

WASTE MANAGEMENT

(Open Elective)

Instruction Duration of SEE SEE CIE Credits 3L Hours per Week 3 Hours 60 Marks 40 Marks

Prerequisites: None.

Course Objectives

This course aims to

- 1. Imbibe the concept of effective utilization of any scrap
- 2. Become familiar with the processes of all disciplines of engineering.
- 3. Learn the technique of connectivity from waste to utility.

Course Outcomes

After the completion of this course, the student will be able to

- 1. Categorize the waste based on the physical and chemical properties.
- 2. Explain the Hazardous Waste Management and Treatment process.
- 3. Illustrate the Environmental Risk Assessment, methods, mitigation and control.
- 4. Interpret the Biological Treatment of Solid and Hazardous Waste.
- 5. Identify the waste disposal options, describe the design and construction, Operation, Monitoring, Closure of Landfills.

COs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO-5	2	3	3	-	2	3	3	2	-	-	-	-			

CO-PO Articulation Matrix

1 - Slightly; 2 - Moderately; 3 - Substantially

Unit –I

Introduction to Waste Management and Municipal Solid Waste Management: Classification of waste: Agro based, Forest residue, Industrial waste, e-Waste, Municipal Solid Waste Management: Fundamentals Sources, composition, Generation rates, Collection of waste, Separation, Transfer and Transport of waste, Treatment and Disposal options.

Unit –II

Hazardous Waste Management and Treatment: Hazardous Waste Identification and Classification, Hazardous Waste Management: Generation, Storage and collection, Transfer and transport, Processing, Disposal, Hazardous Waste Treatment: Physical and Chemical treatment, Thermal treatment, Biological treatment, Pollution Prevention and Waste Minimisation, Hazardous Wastes Management in India.

Unit –III

Environmental Risk Assessment: Defining risk and environmental risk, Parameters for toxicity quantification, Types of exposure, Biomagnifications, Effects of exposure to toxic chemicals, Risk analysis and Risk matrix, Methods of risk assessment, Mitigation and control of the risk, Case studies.

Unit –IV

Biological Treatment: Solid and Hazardous Waste Composting, Bioreactors, Anaerobic decomposition of solid waste, Principles of biodegradation of toxic waste, Inhibition, Co-Metabolism, Oxidative and Reductive processes, Slurry phase Bioreactor, In-situ-remediation.

Unit –V

Waste Disposal: Key Issues in Waste Disposal, Disposal Options and Selection Criteria: Disposal options, Selection criteria, Sanitary Landfill: Principle, Landfill processes, Landfill Gas Emission: Composition and properties, Hazards, Migration, Control, Leach ate Formation: Composition and properties. Leach ate migration, Control, Treatment, Environmental Effects of Landfill, Landfill Operation Issues, Design and construction, Operation, Monitoring, Closure of Landfills-Landfill Remediation, National and International Waste Management programs.

- 2. Solid and Hazardous Waste Management 2007 by S.C.Bhatia Atlantic Publishers & Dist.

22BTO05

COGNITIVE NEUROSCIENCE

(Open Elective)

Instruction Duration of SEE SEE CIE Credits 2 L-1T Hours per Week 3 Hours 60 Marks 40 Marks 3

Prerequisites: The school level basic knowledge in Fundamental science is required

Course Objectives

The main objectives of this course are to:

- 1. Understanding the brain effects that give rise to our abilities to perceive, act and think
- 2. Gain skills on the way that cognition is associated with neural activity
- 3. Compare and contrast the organization and function of numerous systems within the brain

Course Outcomes

At the end of the course, students will be able to:

- 1. Gain familiarity and basic knowledge about brain systems and functions.
- 2. Understand brain's neuro-transimitter system.
- 3. Understanding the brain's methods gives rise to behaviour whether we engage in any activity (e.g., walking, talking, etc.).
- 4. Identify the patterns of varied activities in neurons that correspond to a person's attempts to move in particular ways.
- 5. Understand the feedback system and brain disorders.

CO-PO Articulation Matrix

Unit –I

Introduction to neuroscience: Outline of neuroanatomical; Neurogenesis, migration Axon path-finding; cell death; Role of neural activity in development; Membranes and membrane potentials.

Unit –II

Action potential: Conductance mechanisms; Chemical and electrical transmission; Postsynaptic potentials; neural integration; Energy consumption in the brain; Attention; Methods jigsaw; Executive Control; Evolution/development; Sheep's brain dissection.

Unit –III

Neurotransmitter systems: Visual information processing; Visual cortex; Visual plasticity; critical periods; Somatosensory system; Pain; Chemoreception; Auditory system; Spinal mechanisms; Brain mechanisms.

Unit –IV

Human and Animal Memory: Pattern completion and separation; LTP and synapses; Spatial cognition; Social cognition; Cellular mechanisms of neural plasticity.

Unit –V

Feedback System and Brain Disorders: Endocrine systems; feeding behaviour, Stress, Addiction, Depression, Schizophrenia, Alzheimer's, Huntington's disease, Parkinson's disease.

FUNDAMENTALS OF NANO SCIENCE AND NANO TECHNOLOGY

Instruction
Duration of SEE
SEE
CIE
Credits

3(3L+0T) Hours per Week 3 Hours 60 Marks 40 Marks 3

Course Objectives

This course aims to give some understanding on

- 1. The introduction and classification of nanoscience and nanomaterials
- 2. Explain the unique properties of nanomaterials.
- 3. The various synthesis routes of nanomaterials
- 4. The tools required for the characterization of nanomaterials.
- 5. The applications of nanomaterials.

Course Outcomes

At the end of the course, the students will be able to

- 1. Explain the types of nanomaterials and classify them.
- 2. Understand various defects, and the effect of nano dimensions on the material behavior.
- 3. Discuss the bottom up and top-down synthesis of nanomaterials.
- 4. Explain the characterization of nanomaterials using various techniques.
- 5. Enlist and explain various applications of nanomaterials in diversified fields and areas.

Unit –I

Introduction: History and scope, classification of nanostructured materials, Fascinating nanostructures, applications of nanomaterials.

Unit –II

Unique properties of nanomaterials: Microstructure and defects in nanocrystalline materials – dislocations, Twins, stacking faults and voids, Grain boundaries, triple junctions and disclinations. Effect of nano-dimensions on materials behavior – Elastic properties, magnetic properties, electrical properties, optical properties, thermal properties, and mechanical properties.

Unit –III

Synthesis Routes: Bottom-up approaches – PVD, CVD, sol-gel process, wet chemical synthesis and self-assembly.Top-down approaches – mechanical alloying, nanolithography.

Unit –IV

Tools to Characterize Nanomaterials: Scanning electron microscopy, transmission electron microscopy, x-ray diffraction, atomic force microscopy, nanoindentation.

Unit –V

Applications of Nanomaterials: Nano-electronics, Micro- and Nano-electromechanical systems

(MEMS/NEMS), Nano sensors, Nano catalyst, Food and Agriculture Industry, Cosmetics and Consumer Goods, Structure and Engineering, Automotive Industry, Water Treatment and the Environment, Nano-medical Applications, Textiles, Paints, Energy, Defense and Space Applications.

Text Books:

- 1. Murty BS, Shankar P, Baldev Raj, Rath BB, James Murday. Textbook of Nanoscience and Nanotechnology. Bangalore: Springer; 2013.
- 2. Introduction to Nanotechnology Charles P. Poole, Jr., and Frank J. Owens, Wiley India Edition, 2012.

- 1. Nano: The Essentials by T. Pradeep, Mc Graw-Hill Education.
- 2. Nanomaterials, Nanotechnologies and Design by Michael F. Ashby, Paulo J. Ferreira, and Daniel L. Schodek
- 3. Transport in Nano structures- David Ferry, Cambridge University press 2000.
- 4. Nanofabrication towards biomedical application: Techniques, tools, Application, and impact Ed. Challa S., S. R. Kumar, J. H. Carola.
- 5. Carbon Nanotubes: Properties and Applications- Michael J. O'Connell.
- 6. Electron Transport in Mesoscopic systems S. Dutta, Cambridge University press.

22CHO03

INDUSTRIAL POLLUTION CONTROL

(Open Elective)

Instruction Duration of SEE SEE CIE Credits

Course Objectives

This course will help the students to understand the:

- 1. Effects of pollution on environment and ecosystems
- 2. Types and sources of pollution
- 3. Measurement of air and water pollution
- 4. Different methods and equipment used in pollution abatement
- 5. Management practices in solid and hazardous wastes.

Course Outcomes

After the completion of this course, students will be able to

- 1. Differentiate the types of wastes generated in an industry, their effects on living and non-living things
- 2. Understand the effect of climate changes, atmospheric dispersion of air pollutants, and operating principles.
- 3. Understand working principles of particulate control devices.
- 4. Quantify wastewater and Assess treatment technologies for wastewater
- 5. Select treatment methodologies for hazardous and E-waste

СО	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	2	1	1	1	1	2	1	1	1	1	1	2	2	2
CO2	2	2	2	2	1	1	2	1	1	1	1	2	2	2
CO3	2	2	1	1	1	2	2	1	1	1	1	2	3	2
CO4	2	1	2	1	1	2	3	1	1	1	1	2	2	3
CO5	2	2	2	2	1	1	3	1	1	1	1	2	3	3

CO-PO Articulation Matrix

Unit –I

Introduction: Definition and types of pollution. Effects of pollution on environment and ecosystems - global warming- greenhouse effect. Laws and standards for pollution. Sources, types, characteristics and effects of air pollutants, liquid effluents, solid wastes industries.

Unit –II

Air Pollution: Meteorological aspects of pollution dispersion, Temperature lapse rates, Turbulence and stability of atmosphere. Indoor air pollution - smoke and hydrocarbons. Richardson Number, Plume raise, plume behavior and characteristics, effective stack height.

Unit –III

Air Pollution General Control Methods and Equipment: Removal of sulphur dioxide, oxides of nitrogen and carbon, organic vapors from gaseous effluents. Removal of particulate matter - principle and working of settling chambers cyclone separators solid traps, fabric and fiber filters, electro-static precipitators.

3 Hours per Week 3 Hours 60 Marks 40 Marks 3

Unit –IV

Introduction to water pollution –Origin of wastewater, types of water pollutants and their effects., Determination of organic matter, Determination of inorganic substances, Physical characteristics, Bacteriological measurement, Zero liquid discharge, wastewater treatment methods – RO, UF, Grey water recycling.

Unit –V

Solid and Hazardous Waste: Solid waste management: Sources and classification, Public health aspects, Methods of collection, Disposal Methods, Hazardous waste management: Definition and sources, Hazardous waste classification, Treatment methods, Disposal methods. E-waste: Sources, environmental and social issues, management practices.

Text Books:

- 1. C.S.Rao, "Environmental Pollution Control Engineering", 3rd Ed, New Age International, 2018.
- 2. S.C. Bhatia, "Solid And Hazardous Waste Management", Atlantic Publishers, 2021

- 1. Metcalf and Eddy, "Wastewater Engineering: Treatment and Reuse", 4th Ed, MGH publishing, 2004.
- 2. M.N Rao and H.V.N Rao, "Air Pollution", Tata McGraw-Hill Publishing Company Limited, New Delhi, 2000.
- 3. Lakshmi Raghupathy, "Introduction to E-Waste Management" TERI Press,
- 4. Peavy, H.S., Rowe, D.R. and Technobanolous, G., "Environmental Engineering", McGraw Hill, 1985.

22CHO04

ENVIRONMENTAL AND SUSTAINABLE DEVELOPMENT

Instruction
Duration of SEE
SEE
CIE
Credits

3(3L+0T) Hours per Week 3 Hours 60 Marks 40 Marks 3

Course Objectives

This course will help the students:

- 1. To have an increased awareness on issues in areas of sustainability
- 2. To understand the role of engineering & technology within sustainable development
- 3. To know the methods, tools and incentives for sustainable product service system development
- 4. To establish a clear understanding of the role and impact of various aspects of engineering decisions on environmental, societal and economic problems.
- 5. To communicate results related to their research on sustainable engineering

Course Outcomes

At the completion of this course, students will be able to:

- 1. Understand the concept of sustainable engineering and its significance in addressing contemporary environmental challenges.
- 2. Explore the 4R concept of solid waste management and examine various tools and methodologies to assess and mitigate the environmental impacts of engineering activities.
- 3. To be aware of the principles and requirements of environmental management standards and their application in promoting environmental sustainability.
- 4. Analyze the challenges and opportunities associated with promoting sustainable habitats such as sustainable cities, sustainable transport, sustainable sources of energy conventional and sustainable materials for green buildings
- 5. Understand and evaluate the industrial processes through the principles of industrial ecology and industrial symbiosis.

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	2	1	3	1	1	2	3	2	1	1	1	3	2	2
CO2	2	2	3	2	1	2	3	2	1	1	1	3	2	2
CO3	2	1	3	1	2	2	3	2	1	2	1	3	2	2
CO4	3	1	3	3	1	3	3	2	2	1	1	3	2	3
CO5	3	3	3	1	2	2	3	2	1	1	2	3	3	3

CO-PO Articulation Matrix

Unit –I

Introduction of sustainability- Need and concept of Sustainable Engineering, Social-environmental and economic sustainability concepts, Sustainable development and challenges, Sustainable Development Goals, Environmental acts and protocols – Clean Development Mechanism (CDM).

Unit –II

Economic and social factors affecting sustainability, Effects of pollution from natural sources, Solid waste-sources, impacts, 4R (Reduce, Reuse, Recycling, Recover) concept, Ozone layer depletion, Global warming, Tools used to ensure sustainability in engineering activities such as environmental management systems and environmental impact assessment studies.

Unit –III

Global, Regional and Local environmental issues, Carbon credits and Carbon trading, Carbon foot

print, Environmental management standards, ISO 14000 series, Life cycle Analysis (LCA)-scope and goal, Procedures of EIA (Environment Impact Assessment) in India.

Unit –IV

Basic concept of sustainable habitat-Sustainable cities, Sustainable transport, Sustainable sources of energy conventional and renewable sources, Green Engineering: Green buildings, Green materials for sustainable design, Methods for increasing energy efficiencies of buildings.

Unit –V

Technology and sustainable development, Sustainable urbanization, Industrialization and poverty reduction, Social and Technological change, Industrial processes-material selection, Pollution prevention, Industrial ecology, Industrial symbiosis.

Text Books:

- 1. Rag R. L., Introduction to Sustainable Engineering, 2nd Ed, PHI Learning Pvt Ltd, 2016.
- 2. Allen D. T and Shonnard D. R., Sustainability Engineering Concepts, Design and Case Studies, 1 st Ed, Prentice Hall, 2011.

- 1. Bradley A. S, Adebayo A. O and Maria. P., Engineering Applications in Sustainable Design and Development, 1st Ed, Cengage Learning, 2016.
- 2. Krishna R. Reddy, Claudio Cameselle, Jeffrey A. Adams., Sustainable Engineering,1st Ed, Wiley, 2019.

3D PRINTING

Instruction Duration of SEE SEE CIE Credits 3L Hours per Week 3 Hours 60 Marks 40 Marks 3

Prerequisites: Nil

Course Objectives

This course aims to

- 1. Make students understand the basic concept of digital manufacturing.
- 2. Teach different processes involved in digital fabrication of products.
- 3. Demonstrate the STL file generation and manipulations.
- 4. Demonstrate various post processing techniques.
- 5. Demonstrate the applications of RP in different fields of engineering

Course Outcomes

Upon completion of this course, students will be able to

- 1. Understand the concept of 3D printing processes, advantages, and limitations.
- 2. Evaluate real-life scenarios and recommend the appropriate 3D printing technology.
- 3. Analyze various pre-processing and post processing techniques.
- 4. Identify components and construct basic 3D printer.
- 5. Explain current and emerging 3D printing technologies in diversified applications

PO/PSO CO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3
CO 1	2	1	1		3	2	2	2		2	1	2			
CO 2	2	2	3	2	2	3	2	2	2	2	2	2			
CO 3	2	1	1	2	2	2	2	2	1	1	1	1			
CO 4	2	2	2	1	2	2	2	2	2	2	2	2			
CO 5	2	1	2	1	1	2	2	2		1		1			

CO-PO Articulation Matrix

Unit –I

Introduction to 3D Printing: Introduction to 3D printing, evolution, distinction between 3D printing and CNC machining. Design considerations: Materials, size, resolution, mass customization. additive vs. subtractive manufacturing, its advantages and limitations.

Unit –II

Photo polymerization processes: Photo polymerization, Stereolithography Apparatus (SLA), Applications, advantages and disadvantages. **Powder bed fusion processes:** Introduction, Selective laser Sintering (SLS), Materials, Applications, advantage and disadvantages. **Extrusionbased systems:** Fused deposition modeling (FDM), principles, Materials, Process Benefits and Drawbacks. **Laminated Object Manufacturing (LOM)**, Principles, Materials, Process Benefits and Drawbacks. **Material Jetting AM Processes:** Evolution of Printing as an Additive Manufacturing Process, Materials, Process Benefits and Drawbacks, Applications of Material Jetting Process.

Unit –III

Pre processing in AM: Modeling and viewing 3D scanning; Model preparation - STL conversion,

STL error diagnostics, STL file Repairs, generic solution, slicing, newly proposed file formats.

Post processing in AM: Support material removal, surface texture improvement, accuracy improvement, aesthetic improvement, preparation for use as a pattern, property enhancements using non thermal and thermal techniques.

Unit –IV

Construction of basic 3D printer: Construction of 3D printing machine – axes, linear motion guide ways, ball screws, motors, bearings, encoders, process chamber, safety interlocks, sensors.

Unit –V

Applications of AM: Application in construction and architectural engineering, aerospace industry, automotive industry, jewelry industry, coin industry. medical and bioengineering applications: planning and simulation of complex surgery, forensic science.

Text Books:

- 1. Gibson, DW. Rosen and B.Stucker; Additive manufacturing methodologies: Rapid prototyping to direct digital manufacturing, Springer, 2010.
- 2. Chee Kai Chua, Kah Fai Leong, 3D printing and additive manufacturing: principles and application, 4 th edition of rapid prototyping, World scientific publishing company, 2014.
- 3. P.K. Venuvinod, Rapid prototyping Laser based and other technologies, Kluwer, 2004.

- 1. Jacob, Paul, Rapid tooling: Technologies and industrial applications, Taylor & amp; Francis Group, 2000.
- 2. Alain Bernard, Georges Taillandier, Additive Manufacturing, Wiley, 2014

CORPORATE ORGANIZATIONAL BEHAVIOR

Instruction Duration of SEE SEE CIE Credits 3 Hours per Week 3 Hours 60 Marks 40 Marks 3

Prerequisites: Nil

Course Objectives

This course aims to

- 1. Define the basic corporate organizational behaviour principles and analyze how these influence behaviour in the work place.
- 2. Provide knowledge on different organizational structures; and concepts of culture, climate and organizational development and make the students familiarize with individual behavior.
- 3. Discuss the theories of Motivation and Leadership.
- 4. Describe the interpersonal and their intrapersonal reactions within the context of the group and also demonstrate effective communication and decision making skills in small group settings
- 5. Describe the basic concepts of Power, Politics, Conflict and Negotiations.

Course Outcomes

Upon completion of this course, students will be able to

- 1. Understand the Corporate Organizational Behaviour principles and practices.
- 2. Compare the various corporate organizational designs and structures enabling organizational development.
- 3. Apply motivational theories and leadership styles in resolving employee's problems and decision making processes.
- 4. Analyze the behaviour, perception and personality of individuals and groups in organizations in terms of the key factors that influence organizational behavior.
- 5. Understand the aspects of power, politics, and apply the skills needed to resolve organizational conflicts.

CO 4	3	2	3	2	2				1		2	3			
CO 5	3	2	2	1	2				1			1			

CO-PO Articulation Matrix

Unit –I

Introduction: Organizational Behaviour, Nature and Levels of Organizational Behaviour, Role of Individuals in an Organization, Individual Differences: Personality and Ability, The Big Five Personality Traits, Perception and the Nature of Perception, Characteristics of the Perceiver, Target and Situation, Perceptual Problems.

Unit –II

Organization Structure: Organizational Designs and Structures, Traditional and Contemporary

Organizational Designs, Corporate Organization: Definition and Structure, Organizational Culture and Ethical Behaviour, Creating an Ethical Culture, Organization Change and Development.

Unit –III

Motivation and Leadership: Motivation, Nature of Motivation, Motivation Process, Early and Contemporary Theories of Motivation, Leadership: Importance and Functions, Early and Contemporary Approaches to Leadership.

Unit –IV

Group Dynamics: Groups and Interpersonal Dynamics, Nature of Groups, Types of Groups, Stages of Group Development, Turning Groups into Effective Teams, **Communication**: The Nature and Importance of Communication in Organizations, Communication Process, Barriers to Communication, Overcoming Barriers to Effective Communication.

Unit –V

Power, Politics, Conflict and Negotiations: Power: The Nature and Types of Power, Sources of Individual, Functional and Divisional Power, Politics and Political Behaviour, Managing Political Behaviour, Organizational Conflict: Nature, Common Forms and Causes of Conflict, Pondy's model of organizational conflict, Conflict Resolution Strategies, Negotiations in Organizations.

Text Books:

- 1. Jennifer George and Gareth Jones, Understanding and Managing Organizational Behaviour, Pearson Education Inc., 2012.
- 2. Jon L Pierce and Donald G. Gardner, Management and Organizational behaviour, Cengage Learning India (P) Limited, 2001.
- 3. Richard Pettinger, Organizational Behaviour, Routledge, 2010

- 1. Stephen P. Robbins, Jennifer George and Gareth Jones, Management and Organizational Behaviour, Pearson Education Inc., 2009.
- 2. John Schermerhorn, Jr., James G. Hunt and Richard N. Osborn, Organizational Behaviour, 10th edition, Wiley India Edition, 2009.

RESEARCH METHODOLOGIES AND INNOVATION

Instruction Duration of SEE SEE CIE Credits 3L Hours per Week 3 Hours 60 Marks 40 Marks

Prerequisites: Nil

Course Objectives

This course aims to

- 1. Make the students to formulate the research problem
- 2. Identify various sources for literature review and data collection.
- 3. Prepare the research design
- 4. Equip the students with good methods to analyze the collected data
- 5. Introduce students to the concepts of innovation

Course Outcomes

Upon completion of this course, the students will be able to

- 1. Define research problem
- 2. Review and assess the quality of literature from various sources.
- 3. Understand and develop various research designs.
- 4. Collect and analyze the data using statistical techniques.
- 5. Apply creative thinking and innovative skills.

PO/PSO CO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3

CO 4	2	2		3	2					2	1	1			
CO 5	2	2	3	2	3	1						3			

CO-PO Articulation Matrix

Unit –I

Research Methodology: Objectives, Motivation and Significance of Research, Types of Research, Research Methods verses Methodology, Research process, Criteria of Good Research, Problems Encountered by Researchers in India, Technique involved in defining a problem.

Unit –II

Literature Survey: Importance of Literature Survey, Sources of Information Primary, Secondary and tertiary, Assessment of Quality of Journals and Articles, Information through Internet **Research writing:** Format of the Research report, Writing a Synopsis, Dissertation, Research Proposal and Research Report

Unit –III

Research Design: Meaning and Need of Research Design, Terminology used in Research Design, Features of a Good Research Design, Formulation of hypothesis, Operationalizing the research question, Different Research Designs – exploratory, descriptive, diagnostic and hypothesistesting research studies, Basic Principles of Experimental Design, Steps in Sample design

Unit –IV

Data Collection and Analysis: Collection of primary dataObservation, Interview and Questionnaire methods, Secondary data, Measures of central tendency, Measures of dispersion, Measures of asymmetry, Important parametric testsz, t, F, ChiSquare, ANOVA significance.

Unit –V

Innovation: Creativity, Innovation and its difference, Blocks for creativity and innovation, overcoming obstacles, Examples of innovation, Being innovative, Steps for Innovation, right climate for innovation, Design led innovation, Gross root innovation, Frugal and flexible approach to innovation.

Text Books:

- 1. C.R Kothari, "Research Methodology Methods & Technique", New Age International Publishers, 2004.
- 2. R. Ganesan, "Research Methodology for Engineers", MJP Publishers, 2011
- 3. The Art of Innovation, Tom Kelley & Jonathan Littman, Profile Books Ltd, UK, 2008

Suggested Reading:

- 1. Vijay Upagade and Aravind Shende, "Research Methodology", S. Chand & Company Ltd., New Delhi, 2009.
- 2. G. Nageswara Rao, "Research Methodology and Quantitative methods", BS Publications, Hyderabad, 2012.
- 3. JUGAAD Innovation, Navi Radjou, Jaideep Prabhu, Simone Ahuja Random house India, Noida, 2012.

PRINCIPLES OF ENTREPRENEURSHIP AND STARTUPS

Instruction Duration of SEE SEE CIE Credits 3L Hours per Week 3 Hours 60 Marks 40 Marks 3

Prerequisites: Nil

Course Objectives

This course aims to

- 1. Impart basic concepts and procedure of idea generation.
- 2. Familiarize the nature of industry and related opportunities and challenges.
- 3. Familiarize with elements of business plan and its procedure.
- 4. Learn the project management and its techniques.
- 5. Know the behavioral issues and time management.

Course Outcomes

Upon completion of this course, the students will be able to

- 1. Understand the concept and essence of entrepreneurship.
- 2. Identify business opportunities and nature of enterprise.
- 3. Analyze the feasibility of new business plan.
- 4. Apply project management techniques like PERT and CPM for effective planning and execution of projects.
- 5. Use behavioral, leadership and time management aspects in entrepreneurial journey.

PO/PSO	PO 1	PO 2	PO 2	PO	PO 5	PO 6	PO 7	PO	PO	PO 10	PO	PO 12	PSO 1	PSO	PSO 2

CO 5	1		1	1	1		2	2	1	1	1	1			

CO-PO Articulation Matrix

Unit –I

Entrepreneurship: Definition, Characteristics of an Entrepreneur, Functions of Entrepreneurs, Entrepreneur vs. Intrapreneur, First Generation Entrepreneur, Women Entrepreneurship, Ideas and their Sources, Conception and Evaluation of Ideas.

Behavioral Aspects of Entrepreneurs: Personality: Determinants, Attributes and Models, Leadership: Concepts and Models, Values and Attitudes, Motivation Aspects.

Unit –II

Indian Industrial Environment: Competence, Opportunities and Challenges, Entrepreneurship and Economic Growth, Small Scale Industry in India, objectives, Linkage among Small, Medium and Heavy Industries, Types of Enterprises, Corporate Social Responsibility.

Unit –III

Business Plan: Introduction, Elements of Business Plan and its salient features, Business Model Canvas, Technical Analysis, Profitability and Financial Analysis, Marketing Analysis, Feasibility Studies, Executive Summary.

Unit –IV

Project Management: During construction phase, project organization, project planning and control using CPM, PERT techniques, human aspects of project management.

Time Management: Approaches of Time Management, their strengths and weaknesses. Time Management Matrix, Urgency Addiction.

Unit –V

Startup: Definition, Startup Ecosystem, Startup Incubator, Need and Importance of Startups and Incubation Centers. Sources of Finance and Incentives for Startups. Innovation, Creativity, Intellectual Property in Entrepreneurial Journey. Business firm Registration Process in INDIA.

Text Books:

- 1. Vasant Desai, "Dynamics of Entrepreneurial Development and Management", Himalaya Publishing House, 1997.
- 2. Prasanna Chandra, "Project-Planning, Analysis, Selection, Implementation and Review", Tata Mcgraw- Hill Publishing Company Ltd, 1995.
- 3. S.S. Khanka, "Entrepreneurial Development", S. Chand & Co. Pvt. Ltd., New Delhi, 2015.

- 1. Robert D. Hisrich, Michael P. Peters, "Entrepreneurship", 5th edition, Tata Mc Graw Hill Publishing Company. Ltd., 2005.
- 2. Stephen R. Covey and A. Roger Merrill, "First Things First", Simon and Schuster Publication, 1994.
